xii

Environmental chemistry—a global perspective

1

1 Environmental chemistry

3

1.1 Environmental chemistry

5

1.2 Environmental composition

8

1.3 Chemical processes

10

1.4 Anthropogenic effects

13

1.5 Content of the chapters

15

Additional resources

17

PART A The Earth's atmosphere

19

2 The Earth's atmosphere

21

2.1 The Earth's atmosphere—the air we breathe

21

2.2 Solar influence on the chemical composition of the atmosphere

25

2.3 Reactions and calculations in atmospheric chemistry

28

Additional resources

41

Problems

41

3 Stratospheric chemistry—ozone

43

3.1 Stratospheric ozone and its relation to Earth processes

43

3.2 Oxygen-only chemistry—formation and turnover of ozone

51

3.3 Processes for catalytic decomposition of ozone

54

3.4 Chlorofluorocarbons (CFCs) and related compounds

59

3.5 Kinetic calculations describing catalytic ozone destruction

66

3.6 Other reactions involving stratospheric ozone

68

3.7 Antarctic and Arctic 'ozone hole' formation

69

Additional resources

72

Problems

73

4 Tropospheric chemistry—smog

76

4.1 What is smog?

77

4.2 The chemistry of photochemical smog

79

4.3 Exhaust gases from the internal combustion engine

92

Additional resources

105

Problems

105

5	Tropospheric chemistry—precipitation	107
5.1	The composition of rain	108
5.2	Atmospheric production and removal of nitric acid	111
5.3	Atmospheric production and removal of sulfuric acid	113
5.4	Acidifying agents in precipitation	120
5.5	Rain, fog, and snow chemistry—similarities and differences	122
5.6	The global picture	125
5.7	Control of anthropogenic nitrogen and sulfur emissions	131
	<i>Additional resources</i>	134
	<i>Problems</i>	134
6	Atmospheric aerosols	137
6.1	Sources of aerosols—a closer look	141
6.2	Aerosol concentrations and lifetimes	150
6.3	Air pollution control for particulate emissions	153
	<i>Additional resources</i>	156
	<i>Problems</i>	156
7	Chemistry of urban and indoor atmospheres	158
7.1	Pollutants in the urban atmosphere	159
7.2	Indoor air quality	167
	<i>Additional resources</i>	179
	<i>Problems</i>	180
8	The chemistry of global climate	182
8.1	Composition of the Earth's atmosphere	183
8.2	Energy balance	184
8.3	The greenhouse gases and aerosols	191
8.4	Energy resources	203
8.5	Greenhouse gases associated with the use of fossil fuels	206
8.6	Sequestration of carbon dioxide	212
	<i>Additional resources</i>	219
	<i>Problems</i>	220
PART B The hydrosphere		223
9	The hydrosphere	225
9.1	The global distribution of water	225
9.2	Physical and chemical properties of water	231
9.3	Concentration units used for aqueous solutions	237
	<i>Additional resources</i>	239
	<i>Problems</i>	240
10	Distribution of species in aquatic systems	242
10.1	Single variable diagrams	243

10.2	Two-variable diagrams—pE / pH diagrams	251
10.3	Measurements of pE	263
	<i>Additional resources</i>	266
	<i>Problems</i>	266
11	Gases in water	269
11.1	Simple gases	270
11.2	Gases that react with water	274
11.3	Alkalinity	279
	<i>Additional resources</i>	287
	<i>Problems</i>	287
12	Organic matter in water	290
12.1	Origins of organic matter in water	292
12.2	Environmental issues related to aqueous organic matter	294
12.3	Humic material—vital matter in water and soils	295
	<i>Additional resources</i>	308
	<i>Problems</i>	308
13	Metals and semi-metals in the hydrosphere	311
13.1	Metals in the aqueous environment	312
13.2	Classification of metals	313
13.3	Types of complexes with metals—metal speciation in the hydrosphere	318
13.4	Three metals—their behaviour in the hydrosphere	330
13.5	Metals associated with suspended matter in water	336
	<i>Additional resources</i>	338
	<i>Problems</i>	338
14	Environmental chemistry of colloids and surfaces	339
14.1	Sizes of environmental solid particles	340
14.2	Surface properties of colloidal materials	341
14.3	Quantitative descriptions of adsorption I	348
14.4	Quantitative descriptions of adsorption II	357
14.5	Quantitative descriptions of adsorption III	360
14.6	Colloidal material in the natural environment	367
	<i>Additional resources</i>	373
	<i>Problems</i>	373
15	Microbiological processes	376
15.1	Microbiological processes—the carbon cycle	378
15.2	Microbiological processes—the nitrogen cycle	394
15.3	Microbiological processes—the sulfur cycle	400
15.4	Classification of microorganisms	403
	<i>Additional resources</i>	410
	<i>Problems</i>	410

16	Water pollution and water treatment chemistry	412
16.1	What is pollution?	412
16.2	Water quality—guidelines, toxicity, and drinking water treatment	415
16.3	Wastewater treatment processes—primary and secondary methods	423
16.4	Wastewater treatment processes—tertiary methods	428
16.5	Advanced microbiological processes	432
16.6	Constructed wetlands	434
16.7	The final products after treatment of wastewater	436
	<i>Additional resources</i>	437
	<i>Problems</i>	437
<hr/> PART C The terrestrial environment		439
17	The terrestrial environment	441
17.1	Soil formation	443
17.2	The three-phase complex nature of soil	451
17.3	Soils and ecosystem services	453
	<i>Additional resources</i>	455
	<i>Problems</i>	455
18	Soil properties	457
18.1	Physical properties	457
18.2	Chemical properties	461
18.3	Soil profiles	468
18.4	Environmental problems associated with soils	473
	<i>Additional resources</i>	486
	<i>Problems</i>	486
19	The chemistry of solid wastes	488
19.1	Solid wastes from mining and metal production	490
19.2	Organic wastes	496
19.3	Mixed urban wastes	506
	<i>Additional resources</i>	516
	<i>Problems</i>	516
20	Toxic organic chemicals	519
20.1	Chemical stability of organic compounds	523
20.2	Mobility of organic compounds	538
20.3	Leachability	543
	<i>Additional resources</i>	547
	<i>Problems</i>	547
21	The future Earth	550

Appendices	557
A.1 Properties of the Earth	557
A.2 Properties of air and water	557
A.3 Area, biomass, and productivity of ecosystem types	558
B.1 The elements	559
B.2 Thermochemical properties of selected elements and compounds	563
B.3 Mean bond enthalpies $\Delta H / \text{kJ mol}^{-1}$ at 298 K	566
B.4 Dissociation constants for acids and bases in aqueous solution at 25°C	567
B.5 Standard redox potentials in aqueous solutions	569
C.1 Fundamental constants	569
C.2 SI prefixes and fundamental geometric relations	570
D.1 Visual MINTEQ 3.1 for Windows	570
Index	573

Solutions manual

The complete worked solutions to the end of chapter problems are available for lecturers as PDF files on the book's companion web site: www.oup.com/uk/vanloon4e/
