Preface

xvii

1. RNA and the Cellular Biochemistry Revisited

Why Study RNA?	1
What is RNA?	2
Polynucleotide Synthesis	5
Types of RNA	9
Transcription and the Central Dogma	11
Promoters, Transcription Factors, and Regulatory Elements	13
Gene and Genome Organization Affect Transcription	18
RNA Polymerases and the Products of Transcription	23
Hallmarks of a Typical mRNA	27
5' Cap	29
5' UTR (Leader Sequence)	30
Coding Region	31
3' UTR (Trailer Sequence)	32
Poly(A) Tail	32
Organellar mRNAs	34
mRNA Stability and Turnover	35
Bicistronic mRNAs	38
Prokaryotic mRNAs	38
mRNA Sequence and Structure Affect Translation	39
Levels of Gene Regulation	41
Alternative Splicing of mRNA from a Single Genetic Locus	43
<i>Trans</i> -Splicing: mRNA Repair	44
Overview of Noncoding RNAs	46
References	47
Further Reading	53

2. Creating a Ribonuclease-Free Environment

Rationale	55
Elimination of Resilient Ribonucleases	56
Latent RNase Contamination Issues	58
Types of Ribonuclease Inhibitors	59
Specific Inhibitors	60
Nonspecific Inhibitors	62

Preparation of Equipment and Reagents	63
Diethyl Pyrocarbonate (DEPC)	64
Alternative: USP Sterile Water	66
Hydrogen Peroxide	66
NaOH and SDS	67
Other Reagents Used to Control Nuclease Activity	67
Guanidinium Salts	67
Sodium Dodecyl Sulfate	68
<i>N</i> -Laurylsarcosine	68
Phenol:Chloroform:Isoamyl Alcohol	68
8-Hydroxyquinoline	69
Cesium Chloride	70
Cesium Trifluoroacetate	70
Proteinase K	70
RNA _{later}	71
Protocol: Synthesis of VDR	71
References	73

3. RNA Isolation Strategies

Rationale	75
Goals in the Purification of RNA	77
Lysis Buffer Formulations	80
Gentle Lysis Buffers	80
Chaotropic Lysis Buffers	87
Isolation of RNA with Guanidinium Buffers	88
Guanidinium–Acid-Phenol Extraction Techniques	89
Protocol: Guanidinium–Acid-Phenol Extraction	91
Density Gradient Centrifugation	92
Cesium Chloride	93
Cesium Trifluoroacetate (CsTFA)	97
Isolation of RNA and DNA from the Same Source	101
Protocol: Simultaneous Isolation of RNA and DNA	101
The Word on Kits	104
Silica Technology	105
Isolation of Cytoplasmic RNA on a Silica Column	106
Affinity Matrices	107
Other Methods	107
Protocol: Rapid Isolation of RNA with SDS and Potassium Acetate Reagents	108
Protocol: Isolation of Prokaryotic RNA	109
Protocol: Isolation of RNA From Yeast	110
Short- and Long-Term Storage of Purified RNA	112
References	114

4. The Truth About Tissues

Rationale	117
Tissue Culture or Tissue?	117

Advantages of Cell Culture	118
Advantages of Tissue Samples	119
Homogenization Methods	120
Motorized Homogenizers	120
Dounce Homogenization	121
BeadBeater Homogenization	123
RNA Isolation Strategies for Various Organs and Tissues	125
Fresh Tissue	126
Frozen Tissue	127
Fixed Tissue	128
Protocol: LiCl–Urea Method for RNA Isolation From Tissue	130
Protocol: RNA Isolation From Lipid-Enriched Samples	133
Purification of Polysome- and Protein-Engaged mRNA	135
Protocol: Isolation of Polysomal mRNA	137
Collecting Samples in the Field	139
RNA “Clean-Up” Methods	140
Troubleshooting RNA Isolation From Tissue	142
References	143
Further Reading	144
5. Going Green: RNA and the Molecular Biology of Plants	
Rationale	145
RNA Isolation and the Peculiarities of Plants	145
Types of RNA Produced in Plant Cells	149
Protocol: RNA Isolation From Leaf	151
Protocol: RNA Isolation From Bark	153
Protocol: RNA Isolation From Fruit	155
Protocol: RNA Isolation From Plant Tissue With Hot Borate	158
Strategies for RNA Isolation From Other Plant Tissues	160
Troubleshooting RNA Isolation From Plant Tissue	161
References	162
Further Reading	164
6. Quality Control for RNA Preparations	
Rationale	167
Quality Control Technique 1: UV Spectrophotometry and Absorption Ratios	167
Determination of Nucleic Acid Concentration	168
Determination of Nucleic Acid Purity	171
Nonspectrophotometric Methods	174
Quality Control Technique 2: Electrophoretic Profiling of RNA	176
Protocol: Nondenaturing Agarose Electrophoresis	179
Quality Control Technique 3: RNA Integrity Number (RIN)	180
Quality Control Technique 4: UV Shadowing	182
Protocol: UV Shadowing	182
Quality Control Technique 5: Sample Capacity to Support RT-PCR	184

Quality Control Technique 6: Sample Capacity to Support Northern Analysis	184
Quality Control Technique 7: Sample Capacity to Support In Vitro Translation	185
References	185
7. cDNA—A Permanent Biochemical Record of the Cell	
Rationale	187
cDNA Synthesis—An Overview	187
First-Strand Considerations	189
Reverse Transcriptase Options	193
Second-Strand Considerations	197
Classical Methods	198
PCR-Based Methods	199
Protocol: First-Strand cDNA Synthesis	199
Assessing cDNA Synthesis Efficiency	201
Cloning cDNA	202
Ligation Considerations	204
Enzymes Used for Ligation	205
Applications	206
References	206
8. RT-PCR: A Science and an Art Form	
Rationale	209
PCR—An Overview	209
RT-PCR—General Approach	217
PCR Carryover Prevention	219
Laboratory Design	220
Procedural Methods	221
Aerosol-Resistant Tips	222
Uracil- <i>N</i> -Glycosylase	223
Primer Design	223
Basic Rules	228
T_m Considerations	233
ΔG Considerations	234
Multiplex Primer Design	235
Optimization Procedures	235
Thermostable Polymerases	240
Positive Controls	241
Negative Controls	241
Hot-Start PCR	242
Locked Nucleic Acid	244
Touchdown PCR	246
Internal Controls	246
The Word on Transcription Controls	249
Analysis of PCR Products	250

RT-PCR Quality Control Points	251
Non-PCR Methods for Confirming PCR-Derived Data	254
Related Techniques	255
5' RACE PCR	255
5' RLM-RACE	256
3' RACE PCR	258
Nested PCR	259
Long-Range PCR	260
Single-Cell PCR	263
Splinkerette PCR	264
The Hunt for Alternative Transcription Start Sites	265
Protocol: First-Strand cDNA Synthesis	266
Protocol: PCR Amplification of cDNA	267
Cloning PCR Products	268
Protocol: A-Tailing of Blunt-End PCR Products	270
Protocol: TA Cloning Ligation Reaction	270
TOPO Cloning	272
Other Amplification Procedures	272
Linear RNA Amplification (Eberwine Process)	273
Strand Displacement Amplification	274
Nucleic Acid Sequence Based Amplification (NASBA)	275
Rolling Circle Amplification (RCA)	275
Ligase Chain Reaction	275
LAMP	276
References and Suggested Reading	276
9. Quantitative PCR Techniques	
Rationale	283
Sensitivity Index	284
Quantitative Approaches	285
The MIQE Guidelines	287
Real-time PCR	288
Real-Time PCR Platforms	292
SYBR Green Assay	293
TaqMan Assay	294
Molecular Beacons	295
Scorpions	297
Melting Curve Analysis	298
Digital PCR	300
Internal Controls	302
Exogenous Controls	302
Control Reaction Formats	304
Negative Control Considerations	308
PCR Arrays	310
Competitive PCR: Key Considerations	311
Competitive PCR: Major Steps Involved	316
Alternative Approach: Nonreal-Time Competitive PCR	318

Protocol: Competitive PCR	318
Troubleshooting Quantitative PCR Techniques	324
References	327
10. miRNA	
Rationale	329
Structural and Functional Characteristics of miRNA	329
miRNA Biogenesis	331
Differences and Similarities of miRNA and siRNA	335
miRNA Profiling	336
miRNA as Key Regulator of Gene Expression	338
miRNA Biomarkers	340
References and Suggested Reading	342
11. RNA Interference and RNA Editing	
Rationale	345
Essential RNAi Terminology	346
RNA Interference—How It Works	348
Endogenous Silencing Pathways	351
Exogenous Silencing Strategies	353
Effective Design of siRNAs	359
RNAi and Alternative Transcript Splicing	363
In Vitro and In Vivo Issues	363
RNAi Validation	367
RT-PCR Approaches	367
Northern Analysis	367
Western Analysis and Other Protein Methods	368
RNAi Applications	368
CRISPR—Cas9	369
References	373
Further Reading	376
12. Stringency: Conditions That Influence Nucleic Acid Structure	
Rationale	377
Types of Double-Stranded Molecules	377
Importance of Controlling Stringency	378
Effect of Salt on Stringency	380
Effect of pH on Stringency	380
Effect of Temperature on Stringency	381
Effect of Formamide on Stringency	381
Effect of Urea on Stringency	382
References	382

13. Electrophoresis of RNA

Rationale	383
Normalization of Samples by Nucleic Acid Concentration	384
Direct Measurement of Poly(A) Content	385
Protocol: Poly(A) Normalization With a Poly(T) Probe	387
Intramolecular Base-Pairing Mandates RNA Denaturation	390
Formaldehyde Denaturation	392
Protocol: Formaldehyde-Denaturing Gels	393
Urea Denaturation	395
Protocol: Urea Denaturation	395
Glyoxal/Dimethyl Sulfoxide Denaturation	396
Protocol: Glyoxalation and Electrophoresis of RNA	397
Gel and Sample Preparation	398
Running RNA on Nondenaturing Gels	399
Molecular Weight Standards	400
Proper Use of Size Standards	401
Ribosomal RNA	402
Gel Staining Options	410
Ethidium Bromide	410
SYBR Green	413
SYBR Gold	413
SYBR Safe	415
GelStar	416
Silver Staining	416
Acridine Orange	416
Methylene Blue	417
Safety Considerations and Equipment Maintenance	418
A Few Tips for Running Agarose Gels for the First Time	420
References	424

14. Photodocumentation and Image Analysis

Rationale	427
Safety First	427
Digital Image Analysis	428
Image Enhancement	431
Filtration	434
Image Formats	436
Practical Considerations	436
Image Analysis Training	439
PhosphorImagers	440
Traditional Methods of Photodocumentation	440
Camera Settings	441
Tips for Optimizing Electrophoretograms	442
Inherent Limitations of Photographic and X-ray Films	445
References and Suggested Reading	446

15. Northern Analysis

Rationale	447
Choice of Blotting Membrane	448
Nitrocellulose	449
Nylon	450
Polyvinylidene Difluoride	451
Handling and Membrane Preparation	451
Northern Transfer Techniques	452
Capillary Transfer	452
TurboBlotter	454
Vacuum Blotting	454
Electroblotting	455
Alkaline Blotting	456
Protocol: RNA Transfer by Passive Capillary Diffusion	457
Protocol: Turboblotter Downward Transfer of RNA	459
Immobilization Techniques	462
Baking	463
Crosslinking by UV Irradiation	463
Protocol: UV Crosslinking RNA to Nylon Filters	464
Postfixation Handling of Blotting Membranes	465
Reverse Northern Analysis	466
References	467

16. Nucleic Acid Probe Technology

Rationale	469
DNA Probes	470
DNA Probe Synthesis	471
Sense and Antisense RNA Probes	475
RNA Probe Synthesis	477
Selection of Labeling System	479
Isotope Labeling	479
Popular Chemiluminescence Platforms	482
Direct Enzyme Labeling	483
Biotin	484
Digoxigenin	486
Fluorescein	487
The Ubiquitous Dyes Cy3 and Cy5	487
Probe Purification	488
Probe Storage	489
Factors Influencing Hybridization Kinetics and Duplex Stability	490
Temperature and T_m Considerations	491
Ionic Strength	494
pH	494
Probe Length	494
Probe Concentration	494
G + C Content	495

Mismatching	496
Probe Complexity	497
Example	497
Viscosity	497
Formamide	498
Urea	498
Mixed-Phase Hybridization: Northern and Southern Blots	499
Prehybridization: Filter Preparation	499
Protocol: Prehybridization for Long Probes	500
Protocol: Generic Method for Probe Removal	503
Principles of Detection	505
Digital Imaging Systems	505
Autoradiography	506
Nonisotopic Procedures	517
Biotin	518
Digoxigenin	518
Fluorescein and Fluorescence Imaging	519
Direct Enzyme Labeling	519
Detection by Chemiluminescence	519
Substrates for Chemiluminescence	521
Chromogenic Detection Procedures	523
References	524
17. Isolation of Polyadenylated RNA	
Rationale	527
Polyadenylation	528
Selection of Polyadenylated Molecules: How It Works	529
The Poly(A) Caveat	531
Example 1 - cDNA Synthesis Considerations	531
Example 2 - Assay Sensitivity Considerations	532
Magnetic Bead Technology for Poly(A) ⁺ Purification	533
Oligo(dT)-Cellulose Chromatography	535
Protocol: Noncolumn Poly(A) ⁺ Purification	536
Protocol: Large-Scale Poly(A) ⁺ RNA Purification with Oligo(dT)-Cellulose Beads	538
References	543
18. Quantification of Specific mRNAs by Nuclease Protection	
Rationale	545
Basic Approach	546
Probe Selection	551
Optimization Suggestions	555
Potential Difficulties	556
Protocol: Transcript Quantification by S1 Analysis	558

Protocol: Transcript Quantification by RNase Protection	562
Troubleshooting	565
References	566
19. Analysis of Nuclear RNA	
Rationale	569
Transcription Rate Assays	569
Relationship to the Study of Steady-State RNA	574
Nuclear Run-off Versus Nuclear Run-on Assay	576
Protocol: Nuclear Run-on Assay	577
Harvesting of Cells and Preparation of Nuclei	577
Alternative Protocol for Preparation of Nuclei From Cell Culture	578
Alternative Protocol for Preparation of Nuclei From Whole Tissue	580
Labeling and Recovery of Transcripts	581
Preparation of Target DNA	583
Preparation of RNA for Hybridization	585
Posthybridization Washes and Detection	586
Protocol: Alternative Procedure for Nuclear Run-on Assay	587
Protocol: Nuclease Protection—Pulse Label Transcription Assay	588
Distinguishing Among the Activities of RNA Polymerases	591
Extraction of Nuclear RNA for Steady-State Analysis	592
Protocol: Direct Isolation of Nuclear RNA	593
Protocol: Preparation of Nuclear RNA From Cells Enriched in Ribonuclease	595
Troubleshooting Nuclear RNA Analysis	596
References	597
Further Reading	599
20. Nonarray Methods for Global Analysis of Gene Expression	
Rationale	601
Essential Issues	602
Subtractive Methods	603
Suppression Subtractive Hybridization (SSH)	603
Troubleshooting	611
Nonsubtractive Methods	613
mRNA Differential Display	614
Troubleshooting	623
References	625
21. Genomes, Transcriptomes, Proteomes, and Bioinformatics	
Rationale	629
Essential Nomenclature	631
Transcriptomes and Transcriptomics	632
RNA-Seq: The Premier Transcriptomics Tool	633

Genomes and Genomics	639
Proteomes and Proteomics	641
RNA–RNA and RNA–Protein Interactions	646
Bioinformatics	648
Search for Genes—Have a BLAST!	649
References	652
22. RNA Biomarker Discovery	
Rationale	655
Biomarkers Defined	655
Characteristics of Useful Biomarkers	657
Circulating RNA	658
Identification of Biomarkers for Research and Diagnostic Applications	659
DNA Approaches	660
RNA Approaches	661
Protein Approaches	663
Metabolomics Approaches	664
Biomarker Issues and Shortcomings	664
References and Suggested Reading	665
23. High-Throughput Analysis of Gene Expression	
Rationale	667
What is a Microarray?	667
What Is a Heat Map?	672
What Microarrays Can Do	674
What Microarrays Cannot Do	674
Major Steps in Microarray Analysis	677
Reference RNA	679
What Is a Macroarray?	680
Applications	682
References	684
24. Functional Genomics and Transcript Profiling	
Rationale	685
Functional Genomics Defined	686
Importance of Functional Genomics Approaches	686
Commonly Used Functional Genomics Approaches	687
Relationship of Functional Genomics Approaches to Classical Molecular Biology	693
References	695
Further Reading	695

25. A Few RNA Success Stories

A Typical Experiment?	698
Sensitivity Issues	701
What to Do Next	701
Where to Turn for Help	703
Current Innovations	704
RNA Biobanking	704
RNA Reprogramming	705
References	706
Epilogue: A Few Pearls of Wisdom	707
Appendix A: Maintaining Complete and Accurate Records	715
Appendix B: Converting Mass to Moles	719
Appendix C: Disposal of Ethidium Bromide and SYBR Green Solutions	723
Appendix D: Removal of DNA From an RNA Sample	727
Appendix E: Removal of RNA From a DNA Sample	729
Appendix F: Useful Stock Solutions for the Molecular Biologist	731
Appendix G: Silanizing Centrifuge Tubes and Glassware	737
Appendix H: Dot Blot Analysis	739
Appendix I: Electrophoresis: Principles, Parameters, and Safety	749
Appendix J: Polyacrylamide Gel Electrophoresis	761
Appendix K: Centrifugation as a Mainstream Tool for the Molecular Biologist	765
Appendix L: Trypsinization Protocol for Anchorage-Dependent Cells	773
Appendix M: Isolation of High-Molecular-Weight DNA by Salting-Out	777
Appendix N: Phenol Preparation	781
Appendix O: Deionization of Formamide, Formaldehyde, and Glyoxal	785
Appendix P: Selected Suppliers of Equipment, Reagents, and Services	787
Appendix Q: Useful SI Prefixes and Common SI Base Units	797
Appendix R: Common Abbreviations	799
Appendix S: Trademark Citations	801
Glossary	805
Index	833
