1	<i>Silviculture and Its Place in Forestry</i>	1
	The Purpose of Silviculture	2
	Improving on Nature Through Silviculture	2
	Silviculture as Applied Ecology	8
	Scope and Terminology of Silvicultural Practice	13
	Role of Cutting in Silviculture	15
	Structure of Forest Stands	16
	Relationship with Wood Utilization	20
	Relationship with Forest Management and the Social Sciences	22
	The Stand and the Forest	22
	Silviculture in Application	28
	Silvicultural Literature	29

PART ONE

Tending and Intermediate Cutting **33**

2	<i>Thinnings and Their Effect on Growth and Yield</i>	35
	Production of Dry Matter	35
	Thinning and its Objectives	45
	Natural Development of the Stand	46
	Classification into Crown Classes	49
	Quantifying Objectives	50
	Effect of Thinning on Wood Production	51
	Effect of Thinning on Economic Yield of Stands	57
3	<i>The Individual Tree and Its Treatment</i>	65
	Response of Trees to Increased Growing Space	65
	Effect on Wood Quality	72

Pruning	75
Natural Pruning	76
Knots	77
Artificial Pruning	79
Pruning for Timber Production	80
Pruning of Ornamental Trees	85
Shearing and Pruning of Christmas Trees	85
4 <i>Methods and Application of Thinning</i>	87
Methods of Thinning	87
Low Thinning	87
Crown Thinning	90
Selection Thinning or Thinning of Dominants	95
Geometric Thinning	101
Free Thinning	106
Quantitative Definition of Thinning Methods	107
Application of Thinning	107
Choosing Methods of Thinning	108
Timing of the First Thinning	110
Timing of Subsequent Thinnings	112
Rotation Length	114
Regulation of Stand Density and Thinning Intensity	117
Relation to Forest Uses Other than Timber Production	128
Conclusion	129
5 <i>Release Operations and Herbicides</i>	132
Cutting Small Trees and Shrubs	134
Herbicides	135
Toxicity of Herbicides and Other Pesticides	135
Modes of Entry and Movement of Herbicides in Woody Plants	139
Formulation of Herbicides	140
Methods of Applying Herbicides	142
Herbicide Compounds	149
Cleaning	152
Types of Vegetation Removed	153
Timing of Cleanings	154
Extent of Release in Cleaning	156
Liberation Operations	157
Methods of Liberation	158
Application of Release Operations	161
6 <i>Improvement and Salvage Cutting: Control of Operations</i>	165
Improvement Cuttings	165
Salvage Cuttings	167
Simple Salvage Cutting	168
Presalvage Cutting	170
Sanitation Cutting	173

Control of Operations	175
Designation of Trees and Stands for Cutting	176
Costs and Benefits of Marking	178
Guidance of Timber Markers	179
Control of Waste and Damage in Logging	180

PART TWO

Regeneration

189

7 <i>Ecology of Regeneration; Direct Seeding</i>	191
Kinds of Natural Regenerative Disturbances	192
Regeneration Mechanisms	195
Adjustment of Growing Space	196
The Environment of the Microsite	198
Species Adaptations and Their Silvicultural Significance	203
Regulation of Regenerative Canopy Openings	205
Essential Steps in Natural Regeneration	208
Direct Seeding	212
Control of Seed-Eating Animals	212
Effect and Modification of Site Factors	213
Relative Merits of Direct Seeding and Planting	215
Broadcast Seeding	216
Strip and Spot Seeding	217
Application of Direct Seeding	218
8 <i>Preparation and Treatment of the Site</i>	222
Slash Disposal	223
Effects of Slash and Its Treatment	223
Methods and Application of Slash Disposal	230
Treatment of the Forest Floor and Competing Vegetation	234
Seedbed Preparation	234
Competing Vegetation	234
Techniques of Treatment	237
Prescribed Burning	238
Mechanical Treatment	249
Improvement of the Site	255
Fertilization	255
Drainage	257
Irrigation	259
9 <i>Choice of Species and Genetic Improvement</i>	262
Fitting Species to the Site	262
Nature of Site or Habitat	263
Methods of Identifying and Classifying Sites	264
Selection of Species and Provenances	269
Genetic Improvement	273

10	<i>Production of Planting Stock</i>	280
	Seed Collection, Production, and Treatment	280
	Harvesting of Wild Seed	280
	Seed Production	282
	Treatment of Seed	284
	Nursery Operations	288
	Location and Establishment of Nurseries	288
	Fertilization and Management of Nursery Soils	290
	Preparation of Sowing of Seedbeds	290
	Control of Weeds	292
	Watering and Shading of Seedbeds	293
	Control of Insects and Management of Fungi	294
	Lifting, Transplanting, and Pruning of Bare-rooted Seedlings	295
	Grading of Seedlings and Transplants	297
	Transportation and Storage of Nursery Stock	298
	Nursery Records	299
	Production of Containerized Stock	299
	Kinds of Containers and Their Characteristics	300
	Growing Containerized Seedlings	301
	Handling of Containerized Seedlings	303
	Vegetative Propagation of Planting Stock	303
11	<i>Tree Planting</i>	305
	Selection of Planting Stock	305
	Season of Planting	308
	Site Preparation	309
	Methods of Planting	309
	Placement of Seedlings and Reshaping of Soil Surface	317
	Care of Planting Stock in the Field	317
	Protection of New Plantations	318
	Density of Plantations	319
	Spatial Arrangement of Plantations	320
	Mixed Plantations	322
	The Role of Planting	323
	PART THREE	
	Silvicultural Systems	327
12	<i>Development of Silviculture Systems and Methods of Reproduction</i>	328
	Classification of Reproduction Methods	330
	Basis of Distinction between Reproduction Methods	331
	Formulating Silvicultural Systems	334
	Harmony with Goals and Characteristics of Ownership	336
	Provision for Regeneration	337

Efficient Use of Growing Space and Site Productivity	339
Control of Damaging Agencies	342
Provision for Sustained Yield	344
Optimum Use of Capital and Growing Stock	352
Concentration and Efficient Arrangement of Operations	358
Resolution of Conflicting Objectives	361
Silviculture by Stand Prescription	362
13 <i>Clearcutting Methods</i>	367
Clearcutting with Artificial Regeneration	369
Clearcutting with Direct Seeding	369
Clearcutting and Planting as A Mode of Intensive Silviculture	370
Clearcutting with Natural Regeneration	374
Clearcutting with Seeding from Adjacent Stands	375
Clearcutting with Regeneration from Seed on The Site	379
Application of Clearcutting Methods	380
Environmental Effects of Clearcutting and Harvesting	386
14 <i>Shelterwood and Seed-Tree Methods</i>	396
Seed-Tree Methods	396
Arrangement of Seed Trees	398
Characteristics of Seed Trees	398
Number and Distribution of Seed Trees	400
Shelterwood Methods	402
Basic Procedures in Shelterwood Methods	403
Variations in Shelterwood Methods	410
Application of Shelterwood and Seed-Tree Methods	416
15 <i>Selection Systems and Uneven-Aged Management</i>	427
Reasons for Uneven-Aged Stands	428
Variations in Spatial Patterns of Selection Cutting	429
Balanced Uneven-Aged Stands	435
Irregular Uneven-Aged Stands	451
Choice of Trees to Be Harvested	453
Evolution of Selection Methods	454
Application of Selection Methods	457
16 <i>Methods Based on Vegetative Regeneration</i>	468
Vegetative Reproduction	468
Coppice Method	474
Application of Simple Coppice Method	476
Coppice-with-Standards Methods	481
Reproduction by Natural Layering	485
Conversion from Coppice to High Forest	485

17	<i>Silviculture of Stratified Mixtures of Species</i>	488
	Structural Concepts	488
	Management and Regeneration of Stratified Mixtures	495
	Relative Merits of Pure and Mixed Stands	508
Appendix I	<i>Common and Scientific Names of Trees and Shrubs Mentioned in the Text</i>	512
Appendix II	<i>Abbreviations in Reference Lists</i>	515
Subject Index		517
