

Contents

Preface, vii

I *Patterns of Life*, I

- What is biogeography?, I
- Habitats and microhabitats, I
- Limits of distribution, 3
- Overcoming the barriers, 6
- The cosmopolitan plantain, 8
- Patterns of dragonflies, IO
- Magnolias—evolutionary relicts,
I 3

- Climatic relicts, I 5
- Endemic organisms, 20
- Microhabitat, 22
- Distribution and food, 25
- Soils and plants, 28
- References, 30

2 *The Physical Limitations of Life*, 32

- Environmental gradients, 32
- Interaction of factors, 39
- Patterns of climate, 4I
- Climate diagrams, 45
- Day-length and latitude, 46
- Soil, 48
- Biomes and life-forms, 5I
- References, 66

3 *Making a living*, 68

- Energy, matter and the
ecosystem, 68
- Nutrients in the ecosystem, 7I
- Primary production, 72
- Efficiency and the number of
trophic levels, 75
- Food and distribution, 79
- Competition, 82
- Case history of an ecosystem,
85
- Reducing competition, 87
- Changing chaffinches, 90
- Predators and prey, 90
- Ecological succession, 94
- Gradients of diversity, 98
- Equivalent species, IO2
- References, IO2

4 *Life (and Death) on Islands*, IO5

- Problems of access, IO6
- Variety of island habitats, IO7
- Problems of isolation, IO8
- Hazards of island life, III
- The Theory of Island Biogeography,
II2
- Second thoughts about the Theory,
II5
- The documentation of extinction,
colonization and equilibrium, I I 6
- The influence of time, I I 8
- Impermanent islands, I I 9
- Opportunities for adaptive radiation,
I 20
- The Hawaiian Islands, I 23
- References, I 30

5 *The Distant Past*, 133

- Centres of dispersal, 134
- Age and area, 135
- Historical biogeography, 135
- Gondwanaland and Laurasia, 137
- The idea of continental drift, 137
- Plate tectonics, 138
- Changing patterns of continents, 139

6 *The Shaping of Today*, 155

- The mammals supplant the reptiles, 155
- Mammals—the final patterns, 158
- Cenozoic climatic changes, 160
- The rise of the flowering plants, 162
- The distribution of flowering plants today, 163
- Mammalian vs. flowering plant geography—comparisons and contrasts, 165

7 *Ice and Change*, 190

- Glacials and interglacials, 192
- The record in ocean sediments, 195
- Biological changes in the Pleistocene, 197
- Interstadials, 203

8 *The Mark of Man*, 216

- The emergence of man, 216
- Man and the megafaunal extinctions, 218
- Domestication and agriculture, 220
- The agricultural biome, 226

- Effect on climate, 142
- Vicariance or dispersal? 143
- Cladistic vicariance, 144
- Early land life in the moving continents, 146
- One world—for a while, 149
- References, 152

- Australia, 170
- New Zealand, 173
- South America, 174
- The Old World tropics—Africa, India and South-east Asia, 177
- Madagascar, 180
- The Cape flora, 181
- The Northern Hemisphere—Holarctic mammals and Boreal plants, 182
- References, 187

- The present interglacial, 205
- Time of warmth, 208
- Climatic deterioration, 209
- Recorded history, 211
- Causes of glaciation, 212
- References, 213

- Man and the atmosphere, 229
- Fragmentation and conservation, 232
- The need for conservation, 234
- References, 235
