

# Contents

	Page
1. Introduction . . . . .	5
2. Crystal symmetry and geometry . . . . .	8
2.1. Symmetry elements . . . . .	8
2.2. Space lattice, indices . . . . .	12
2.3. Groups and systems . . . . .	17
3. X-rays and the diffraction . . . . .	21
3.1. The production of X-rays . . . . .	21
3.2. Absorption of X-rays . . . . .	24
3.3. Diffraction of X-rays . . . . .	26
4. The powder method . . . . .	26
4.1. Powder camera and powder diffractometer . . . . .	26
4.2. Indexing . . . . .	28
4.3. Characteristic extinctions . . . . .	29
4.4. The number of formula units in the cell . . . . .	30
4.5. Safety precautions . . . . .	30
4.6. Analytical applications . . . . .	31
5. Experiments in the X-ray powder method . . . . .	33
5.1. Instruments . . . . .	33
5.2. Debye-Scherrer method procedure . . . . .	36
5.3. Diffractometer technique procedure . . . . .	41
