

Contents

Basics	1	Nucleotides and Nucleic Acids	
Chemistry		Bases and Nucleotides.....	64
Periodic Table	2	RNA	66
Isomerism	4	DNA	68
Substance Classes I.....	6		
Substance Classes II.....	8	Metabolism	71
Chemical Reactions	10	Enzymes	
Redox Processes	12	Basics.....	72
Acids and Bases.....	14	Enzyme Catalysis	74
Physical Chemistry		Enzyme Kinetics I.....	76
Energetics.....	16	Enzyme Kinetics II	78
Thermodynamics.....	18	Allosteric Regulation.....	80
Catalysis	20	Inhibitors	82
Water as a Solvent	22	Enzymatic Analysis	84
Hydrophobic Interactions	24	Coenzymes I.....	86
		Coenzymes II.....	88
		Coenzymes III	90
		Coenzymes IV	92
		Pathobiochemistry.....	94
Biomolecules	27	Metabolic Pathways	
Carbohydrates		Intermediary Metabolism I.....	96
Chemistry of Sugars.....	28	Intermediary Metabolism II	98
Monosaccharides and Disaccharides.....	30	Regulatory Mechanisms I.....	100
Polysaccharides.....	32	Regulatory Mechanisms II	102
Glycoproteins and Glycosaminoglycans....	34		
Lipids		Energy Metabolism	
Overview	36	ATP.....	104
Fatty Acids and Fats.....	38	Energetic Coupling.....	106
Glycolipids	40	Energy Conservation at Membranes.....	108
Sphingolipids.....	42	Energy Metabolism: Overview.....	110
Isoprenoids	44	Oxoacid Dehydrogenases	112
Steroids	46	Tricarboxylic Acid Cycle: Reactions.....	114
Amino Acids		Tricarboxylic Acid Cycle:	
Properties.....	48	Metabolic Functions	116
Proteinogenic Amino Acids	50	Mitochondrial Transport	118
Selenocysteine and Nonproteinogenic		Respiratory Chain.....	120
Amino Acids.....	52	ATP Synthesis	122
Peptides and Proteins		Regulation of Energy Metabolism.....	124
Peptides and Proteins: Overview.....	54	Pathobiochemistry.....	126
Protein Structures	56		
Structural Proteins.....	58	Carbohydrate Metabolism	
Soluble Proteins	60	Overview	128
Protein Modification	62	Glycolysis	130
		Pentose Phosphate Pathway	132
		Gluconeogenesis.....	134
		Glycogen Metabolism	136

Regulation of Carbohydrate Metabolism I	138	Protein Sorting	218
Regulation of Carbohydrate Metabolism II	140	Protein Synthesis in the rER	220
Pathobiochemistry	142	Protein Maturation	222
Lipid Metabolism		Lysosomes	
Overview	144	Lysosomes	224
Fatty Acid Degradation: β -Oxidation	146	Peroxisomes	
Minor Pathways of Fatty Acid Degradation	148	Peroxisomes	226
Fatty Acid Biosynthesis	150	Molecular Genetics	229
Fatty Acid Metabolism: Other Reactions	152	Overview	
Biosynthesis of Complex Lipids	154	Overview	230
Biosynthesis of Cholesterol	156	Genome	
Pathobiochemistry	158	Genes and Genomes	232
Protein Metabolism		Chromatin	
Overview	160	Chromatin	234
Proteolysis	162	Nucleic Acid-Modifying Enzymes	236
Pathways of Nitrogen	164	Replication	238
Transamination and Deamination	166	Transcription	240
Amino Acid Degradation I	168	Transcriptional Control	242
Amino Acid Degradation II	170	RNA Maturation	244
Urea Cycle	172	Genetic Code	
Amino Acid Biosynthesis	174	Genetic Code	246
Pathobiochemistry	176	Translation I: Initiation	248
Nucleotide Metabolism		Translation II	250
Overview	178	Antibiotics	252
Nucleotide Degradation	180	Mutation and Repair	254
Purine and Pyrimidine Biosynthesis	182	Genetic Engineering	
Nucleotide Biosynthesis	184	DNA Cloning	256
Pathobiochemistry	186	DNA Sequencing	258
Porphyrin Metabolism		Polymerase Chain Reaction (PCR)	260
Heme Biosynthesis	188	Genetic Engineering in Medicine	262
Heme Degradation	190		
Cell Organelles	193	Tissues and Organs	265
Basics		Digestive System	
Structure of Cells	194	Overview	266
Cell Components and Cytoplasm	196	Digestive Secretions	268
Cytoskeleton		Digestive Processes	270
Components	198	Absorption I	272
Structure and Functions	200	Absorption II	274
Motor Proteins	202	Pathobiochemistry	276
Nucleus		Blood	
Nucleus	204	Blood: Composition and Functions	278
Mitochondria		Plasma Proteins	280
Structure and Functions	206	Lipoproteins I	282
Membranes		Lipoproteins II	284
Structure and Components	208	Hemoglobin and Gas Transport	286
Transport Processes	210	Reactive Oxygen Species	288
Transport Proteins	212	Erythrocyte Metabolism	290
Endocytosis and Exocytosis	214	Acid-Base Balance	292
ER and Golgi Apparatus		Blood Clotting	294
Structure and Function	216	Inhibition of Blood Clotting, Fibrinolysis	296
		Blood Groups	298
		Pathobiochemistry	300

Immune System	
Immune System	302
Specific Immune Response	304
T-cell Activation	306
Complement System	308
Antibodies	310
Pathobiochemistry.....	312
Liver	
Functions	314
Carbohydrate Metabolism	316
Lipid Metabolism	318
Bile Acids	320
Biotransformation	322
Cytochrome P450 Systems.....	324
Ethanol Metabolism.....	326
Pathobiochemistry.....	328
Adipose Tissue	
Functions	330
Pathobiochemistry.....	332
Kidney	
Functions	334
Electrolyte and Water Recycling.....	336
Metabolism	338
Muscle	
Muscle Contraction	340
Control of Muscle Contraction	342
Muscle Metabolism	344
Pathobiochemistry.....	346
Connective Tissue	
Bone and Teeth	348
Collagens.....	350
Extracellular Matrix I	352
Extracellular Matrix II.....	354
Pathobiochemistry.....	356
Brain and Sensory Organs	
Signal Transmission in the Central Nervous System	358
Resting Potential and Action Potential....	360
Neurotransmitters	362
Receptors for Neurotransmitters	364
Metabolism of the Brain.....	366
Sight.....	368
Pathobiochemistry.....	370
Integration of Metabolism	
Integration of Metabolism I.....	372
Integration of Metabolism II	374
Integration of Metabolism III	376
Integration of Metabolism IV	378
Nutrition	381
Nutrients	
Organic Substances	382
Minerals and Trace Elements	384
Calcium Metabolism	386
Iron Metabolism.....	388
Pathobiochemistry.....	390
Vitamins	
Vitamins I.....	392
Vitamins II	394
Signaling Systems	397
Signal Transduction	
Signal Transduction	398
Membrane Receptors	400
Ion Channels	402
GTP-Binding Proteins	404
Second Messengers I	406
Second Messengers II	408
Protein Kinases and Phosphatases.....	410
Signal Cascades.....	412
Hormone Systems	
Basics.....	414
Plasma Levels and Hormone Hierarchy ...	416
Lipophilic Signaling Substances	
Mechanism of Action	418
Corticosteroids	420
Sex Steroids and the Menstrual Cycle.....	422
Metabolism of Steroid Hormones	424
Thyroid Hormones.....	426
Hydrophilic Signaling Substances	
Insulin	428
Diabetes Mellitus	430
Other Hormones.....	432
Catecholamines.....	434
Tissue Hormones and Mediators	436
Eicosanoids	438
Cytokines	440
Growth and Development	443
Cell Proliferation	
Cell Cycle I.....	444
Cell Cycle II.....	446
Apoptosis	448
Oncogenes	450
Tumors	452
Cytostatic Drugs	454
Viruses.....	456
Appendix	459
Abbreviations	460
Quantities and Units	462
Source Credits	464
Further Reading	465
Index	467
