

Contents

1	Introduction	1
	1.1 How to Read This Text	3
	References	3
2	Global Warming and Climate Change	5
	Further Reading	12
	References	12
3	Systems Theory	13
	3.1 Systems and Boundaries	14
	3.2 Systems and Thermodynamics	17
	3.3 Systems of Systems	23
	Case Study 3: Nutrient Flows, Irrigation, and Desertification	24
	Further Reading	34
	Sample Problems	35
	References	39
4	Dynamic Systems	41
	4.1 System State	42
	4.2 Randomness	46
	4.3 Analysis	48
	4.3.1 Correlation	48
	4.3.2 Stationarity	51
	4.3.3 Transformations	56
	Case Study 4: Water Levels of the Oceans and Great Lakes	58
	Further Reading	61
	Sample Problems	62
	References	65
5	Linear Systems	67
	5.1 Linearity	68
	5.2 Modes	69
	5.3 System Coupling	73

5.4	Dynamics	75
5.5	Control of Dynamic Systems	81
5.6	Non-normal Systems	83
	Case Study 5: System Decoupling	85
	Further Reading	90
	Sample Problems	90
	References	95
6	Nonlinear Dynamic Systems: Uncoupled	97
6.1	Simple Dynamics.....	98
6.2	Bifurcations.....	103
6.3	Hysteresis and Catastrophes	108
	6.3.1 Catastrophic State Transition	110
	6.3.2 System Irreversibility and Hysteresis.....	111
6.4	System Behaviour near Folds.....	114
6.5	Overview.....	120
	Case Study 6: Climate and Hysteresis	122
	Further Reading	128
	Sample Problems	129
	References.....	134
7	Nonlinear Dynamic Systems: Coupled	135
7.1	Linearization.....	136
7.2	2D Nonlinear Systems	139
7.3	Limit Cycles and Bifurcations	144
7.4	Control and Stabilization	146
	Case Study 7: Geysers, Earthquakes, and Limit Cycles	151
	Further Reading	160
	Sample Problems	161
	References.....	167
8	Spatial Systems	169
8.1	PDEs	171
8.2	PDEs and Earth Systems.....	174
8.3	Discretization	177
	8.3.1 Discretization in Time.....	177
	8.3.2 Discretization in Space	179
8.4	Spatial Continuous-State Models.....	181
8.5	Spatial Discrete-State Models	192
8.6	Agent Models.....	196
	Case Study 8: Global Circulation Models	199
	Further Reading	202
	Sample Problems	203
	References.....	210

9	Power Laws and Non-Gaussian Systems	211
9.1	The Gaussian Distribution	213
9.2	The Exponential Distribution	214
9.3	Heavy Tailed Distributions.....	216
9.4	Sources of Power Laws	225
9.5	Synthesis and Analysis of Power Laws	228
	Case Study 9: Power Laws in Social Systems	234
	Further Reading	238
	Sample Problems	239
	References.....	244
10	Complex Systems	245
10.1	Spatial Nonlinear Models	246
	10.1.1 Phase Transitions	247
	10.1.2 Criticality	248
10.2	Self-Organized Criticality.....	253
10.3	Emergence	256
10.4	Complex Systems of Systems	257
	Case Study 10: Complex Systems in Nature	262
	Further Reading	264
	Sample Problems	265
	References.....	269
11	Observation and Inference	271
11.1	Forward Models	272
11.2	Remote Measurement	274
11.3	Resolution	278
	11.3.1 Measurement Resolution	278
	11.3.2 State Resolution	286
11.4	Inverse Problems	287
	Case Study 11A: Sensing — Synthetic Aperture Radar	299
	Case Study 11B: Inversion — Atmospheric Temperature	303
	Further Reading	305
	Sample Problems	305
	References.....	308
12	Water	309
12.1	Ocean Acidification	311
12.2	Ocean Garbage	312
12.3	Groundwater.....	313
	Case Study 12: Satellite Remote Sensing of the Ocean	316
	Further Reading	317
	Sample Problems	318
	References.....	318

13	Concluding Thoughts	319
	Further Reading	320
	References	321
 Appendices		
A	Matrix Algebra	325
	Further Reading	331
	References	331
B	Random Variables and Statistics	333
	Further Reading	339
	References	340
C	Notation Overview	341
	Index	343
