

Preface to the Second Edition	xi	
Preface to the First Edition	xiii	
1. The Relation Between the Object and the Image	1	
Luminous and Nonluminous Objects	1	
Object and Image	2	
Theories of Vision	3	
Light Travels in Straight Lines	6	
Images Formed in a <i>Camera Obscura</i> :		
Geometric Considerations	7	
Where Does Light Come From?	10	
How Can the Amount of Light Be Measured?	12	
Web Resources	12	
Anamorphosis in Art	12	
Optical Illusions	12	
Camouflage and Mimicry in Nature	12	
Shadow Art and Dance	13	
Camera Obscura	13	
2. The Geometric Relationship Between Object and Image	15	
Reflection by a Plane Mirror	15	
Reflection by a Curved Mirror	17	
Reflection from Various Sources	20	
Images Formed by Refraction at a Plane Surface	21	
Images Formed by Refraction at a Curved Surface	26	
Fermat's Principle	32	
Optical Path Length	35	
Lens Aberrations	36	
Geometric Optics and Biology	37	
Geometric Optics of the Human Eye	38	
Web Resources	41	
Camera Lucida	41	
Kaleidoscopes	41	
Art	41	
3. The Dependence of Image Formation on the Nature of Light	43	
Christiaan Huygens and the Invention of the Wave Theory of Light	43	
Thomas Young and the Development of the Wave Theory of Light	49	
James Clerk Maxwell and the Wave Theory of Light	61	
Ernst Abbe and the Relationship of Diffraction to Image Formation	64	
Resolving Power and the Limit of Resolution	70	
Contrast	75	
Web Resources	77	
Physical Optics and Waves	77	
4. Bright-Field Microscopy	79	
Components of the Microscope	82	
The Optical Paths of the Light Microscope	88	
Using the Bright-Field Microscope	92	
Depth of Field	94	
Out-of-Focus Contrast	95	
Uses of Bright-Field Microscopy	96	
Care and Cleaning of the Light Microscope	96	
Web Resources	96	
5. Photomicrography	97	
Setting up the Microscope for Photomicrography	97	
Scientific History of Photography	100	
General Nature of the Photographic Process	103	
The Resolution of the Film	105	
Exposure and Composition	107	
The Similarities between Film and the Retina	109	
Web Resources	110	
Photomicrography	110	
Microscope Camera Adapters for Mounting a Digital Camera on a Microscope	110	
Mounting and Using a Nikon Coolpix 5000	110	

AMSCOPE Digital Cameras	110	Interference Microscopes Based on a Mach–Zehnder Type Interferometer	179
Micron/Aptina CMOS Sensor	110	Interference Microscopes Based on Polarized Light	181
Cell Phone Microscopy	110	The Use of Transmission Interference Microscopy in Biology	185
Color Vision	110	Reflection–Interference Microscopy	185
UV-VIS-IR Photography of Flowers	110	Uses of Reflection–Interference Microscopy in Biology	186
Multispectral UV-VIS-IR Apochromatic Lenses	110	Web Resources	187
		Colors of Nature	187
6. Methods of Generating Contrast	111	9. Differential Interference Contrast (DIC) Microscopy	189
Dark-Field Microscopy	111	Design of a Transmitted Light Differential Interference Contrast Microscope	189
Rheinberg Illumination	113	Interpretation of a Transmitted Light Differential Interference Contrast Image	192
Oblique Illumination	114	Design of a Reflected Light Differential Interference Contrast Microscope	195
Phase-Contrast Microscopy	116	Interpretation of a Reflected Light Differential Interference Contrast Image	196
Oblique Illumination Reconsidered	124	10. Amplitude Modulation Contrast Microscopy	197
Annular Illumination	125	Hoffman Modulation Contrast Microscopy	198
7. Polarization Microscopy	127	Reflected Light Hoffman Modulation Contrast Microscopy	201
What is Polarized Light?	127	The Single-Sideband Edge Enhancement Microscope	202
Use an Analyzer to Test for Polarized Light	129	Web Resources	203
Production of Polarized Light	130	Hoffman Modulation Contrast Optics	203
Influencing Light	135	11. Fluorescence Microscopy	205
Design of a Polarizing Microscope	137	Discovery of Fluorescence	205
What is the Molecular Basis of Birefringence?	140	Physics of Fluorescence	206
Interference of Polarized Light	143	Design of a Fluorescence Microscope	213
The Origin of Colors in Birefringent Specimens	151	Fluorescence Probes	215
Use of Compensators to Determine the Magnitude and Sign of Birefringence	151	Pitfalls and Cures in Fluorescence Microscopy	216
Crystalline versus Form Birefringence	161	Web Resources	217
Orthoscopic versus Conoscopic Observations	163	Fluorescence Foundation	217
Reflected Light Polarization Microscopy	163	Fluorescent Microscopy	217
Uses of Polarization Microscopy	163	Fluorescent Quinine Fountain	217
Optical Rotatory (or Rotary) Polarization and Optical Rotatory (or Rotary) Dispersion	165	Fluorescent Dyes	217
Web Resources	166	Interference Filters	217
Polarized Light	166	12. Various Types of Microscopes and Accessories	219
Polarized Light Microscopy	167	Confocal Microscopes	219
Polarized Light and Art	167	Multi-Photon Confocal Scanning Microscopy	222
8. Interference Microscopy	169		
Generation of Interference Colors	169		
The Relationship of Interference Microscopy to Phase-Contrast Microscopy	173		
Quantitative Interference Microscopy: Determination of the Refractive Index, Mass, Concentration of Dry Matter, Concentration of Water, and Density	175		
Source of Errors When Using an Interference Microscope	177		
Making a Coherent Reference Beam	178		
Double-Beam versus Multiple-Beam Interference	178		

Raman Scattering Confocal Scanning Microscopy	223	Optical Couplers for Mounting Digital Cameras on Microscopes	253
Stimulated Emission Depletion Confocal Scanning Microscopy	224	Monitors	253
Total Internal Reflectance Fluorescence Microscopy	224	14. Image Processing and Analysis	255
Superresolution With Wide-Field Microscopes	225	Analog Image Processing	255
Structured Illumination Microscopy	225	Digital Image Processing	260
Photoactivated Localization Microscopy and Stochastic Optical Reconstruction Microscopy	225	Enhancement Functions of Digital Image Processors	262
Fluorescence Resonance Energy Transfer	227	Analysis Functions of Digital Image Processors	266
Fluorescence Redistribution After Photobleaching	228	ToupView Digital Image Processing Software	266
Laser Microbeam Microscope	228	The Ethics of Digital Image Processing	266
Optical Tweezers	229	Web Resources	268
Laser Capture Microdissection	229	Commercial Digital Image Processors	268
Laser Doppler Microscope	230	Open Source Software	268
Centrifuge Microscope	231	Frame Grabber Boards	268
X-Ray Microscope	231	Helpful Web Sites on Digital Image Processing	268
Infrared Microscope	233	Ethics of Digital Image Processing	268
Nuclear Magnetic Resonance Imaging Microscope	233	Free Publications	269
Stereo Microscopes	234	15. Laboratory Exercises	271
Scanning Probe Microscopes	234	Laboratory 1: The Nature of Light and Geometric Optics	271
Acoustic Microscope	235	The Spectral Composition of Light: The Decomposition and Recombination of White Light	271
Horizontal and Traveling Microscopes	237	Light Travels in Straight Lines	271
Microscopes for Children	237	Demonstration of the Inverse Square Law	271
Microscope Accessories	237	Geometrical Optics: Reflection	271
Web Resources	237	Geometrical Optics: Refraction	272
Confocal Microscopy	237	Measure the Critical Angle of Reflection	272
Raman Spectroscopy	237	Refraction through Lenses	272
Superresolution Microscopy	238	Measure the Refractive Index of a Liquid	272
Optical Tweezers	238	Laboratory 2: Physical Optics	273
Laser Capture Microdissection	238	Observation of the Diffraction Patterns of Opaque Rectangles	273
X-Ray Microscopes	238	Observation of Diffraction Patterns of Objects of Various Shapes	273
Scanning Probe Microscopes	238	The Effect of Slit Width on the Diffraction Pattern	274
Acoustic Microscopes	238	Observation of Images and Fraunhofer Diffraction Patterns of Slits and Grids	274
Accessories	238	Observation of the Fourier Transform of an Object	274
13. Video and Digital Microscopy	239	Spatial Filtering	274
The Value of Video and Digital Microscopy	239	Laboratory 3: The Bright-Field Microscope and Image Formation	274
Video and Digital Cameras: The Optical-to-Electrical Signal Converters	240	Illuminate a Specimen with Köhler Illumination Using a Microscope with a Mirror and a Separate Light Source	274
Monitors: Conversion of an Electronic Signal into an Optical Signal	250		
Storage of Video and Digital Images	252		
Connecting a Video System	252		
Web Resources	252		
Video and Digital Cameras	252		

Illuminate a Specimen with Critical Illumination Using a Microscope with a Mirror and a Separate Light Source	275	Measuring the Retardation of Stress Fibers Using a Brace-Köhler Compensator (optional)	281
Establish Köhler Illumination on the Olympus BH-2	275	Procedure for Testing the Amount of Strain Birefringence in an Objective (optional)	281
Observe the Diffraction Pattern of a Ruled Grating with the Olympus BH-2	275	Laboratory 8: Interference Microscopy	282
Observe the Effect of the Numerical Aperture of the Objective on Resolution	275	Qualitative Image Duplication Interference Microscopy Using the AO-Baker Interference Microscope	282
Lens Aberrations	276	Using the AO-Baker Interference Microscope to Weigh a Live Nucleus	282
Measurements with a Microscope	276	Laboratory 9: Differential Interference Contrast Microscopy and Hoffman Modulation Contrast Microscopy	282
Laboratory 4: Phase-Contrast Microscopy, Dark-Field Microscopy, Rheinberg Illumination, and Oblique Illumination	276	Differential Interference Contrast Microscopy	282
Phase-Contrast Microscopy	277	Hoffman Modulation Contrast Microscopy	283
Dark-Field Microscopy	278	Seeing “Animalcules” or “Living Atoms” in Pseudo-Relief	283
Rheinberg Illumination	278	Laboratory 10: Video and Digital Microscopy and Analog and Digital Image Processing	283
Oblique Illumination	278	Making Videos of Moving Microscopic Objects	283
Use of <i>Camera Lucida</i> (optional)	279	Analog Image Processing	284
Laboratory 5: Fluorescence Microscopy	279	Digital Image Processing	284
Setting up Köhler Illumination with Incident Light	279	Web Resources	285
Visualizing Organelles with Fluorescent Organelle-Selective Stains	279	Commercial Sources for Laboratory Equipment and Specimens	285
Observe Organelles (e.g. Mitochondria and/or Peroxisomes) in Tobacco Cells Transformed with Organelle-Targeted Green Fluorescent Protein (GFP)	280	Pond Water: Identification of Organisms	285
Determine the Resolution of Journal Plates	280	References	287
Laboratory 6: Polarized Light	280	Appendix I: Light Microscopy: A Retrospective	327
Observation of CuSO ₄ and Urea	280	Appendix II: A Final Exam	331
Observation of Bordered Pits	280	Appendix III: A Microscopist’s Model of the Photon	335
Observation of the Starch Grains of Potato	280	Index	345
Observation of DNA	280		
Observations of the Orientation of Microfibrils in the Cell Walls	281		
Art with Polarized Light (optional)	281		
Laboratory 7: Polarizing Light Microscopy	281		
Measuring the Retardation of Cell Walls Using a de Sénarmont Compensator (optional)	281
