

# Contents

- Preface *v*
- 1** Introduction 1
- 2** The geological time frame 6
- 3** Early ideas on the origin of life 10
- Spontaneous generation 10
- The Panspermia hypothesis 12
- The Oparin–Haldane hypothesis—the primordial soup 13
- Other models for prebiotic chemistry 18
- Coacervates 19
- 4** What is life? 22
- Equipment in a space probe—exobiology 22
- Life—chemical composition 26
- A couple of other properties of life 28
- Life—from the viewpoint of thermodynamics 30
- Autocatalytic cycles 34
- Life as replicators 36
- Structure and function of a bacterial cell 39
- 5** Origin of life 45
- The RNA world 45
- Origin of life—chance or necessity 51
- 6** From the RNA world to the first cell 54
- What are the problems? 54
- The nature of genetic information 59
- The cell membrane 60
- 7** The evolution of metabolism 63
- Energy metabolism in bacteria 63
- The earliest evolution of energy metabolism 70
- Some general considerations on assimilatory metabolism—  
        the origin of carbohydrate catalysis and fermentation 72
- Syntrophy 75

- 8 The eukaryotic cell 78**  
Properties of the eukaryotic cell 78  
The origin of the eukaryotic cell 83  
The origin of mitochondria and chloroplasts 84  
Models for evolution from symbionts to organelles 86
- 9 Multicellular organisms—origins as cell colonies 92**
- 10 Sex, species concepts, and evolution 98**  
Sex 98  
What is a species? 100  
Species concepts for microbes—evolution without sex 103
- 11 Our anaerobic inheritance 109**
- 12 The molecular tree 112**  
Principles, assumptions, and problems—the molecular clock 112  
The universal tree: archaeobacteria, eubacteria, and eukaryotes 117  
The universal ancestor 123
- 13 Evidence from geology 125**  
Earth's active surface 125  
Speculations on properties of the primordial atmosphere 127  
The nature of geological evidence for early life 129  
Precambrian fossils and Precambrian microbial communities 131  
Extant stromatolitic microbial mats 134  
The rise of atmospheric oxygen 137  
The development of biogeochemical cycling 141  
Precambrian glaciations 148  
The Gaia hypothesis as pseudo-science 149
- 14 Transitions during the evolution of life 151**  
Further reading 157  
Glossary 161  
Index 167
