

Contents

<i>List of Figures</i>	ix
<i>Acknowledgments</i>	xiii
1. Introduction	1
PART I: ROBUSTNESS BELOW THE GENE LEVEL	13
2. The Genetic Alphabet	15
3. The Genetic Code	25
4. RNA Structure	39
5. Proteins and Point Mutations	62
6. Proteins and Recombination	78
PART II: ROBUSTNESS ABOVE THE GENE LEVEL	91
7. Regulatory DNA Regions and Their Reorganization in Evolution	93
8. Metabolic Pathways	104
9. Metabolic Networks	120
10. <i>Drosophila</i> Segmentation and Other Gene Regulatory Networks	143
11. Phenotypic Traits, Cryptic Variation, and Human Diseases	161
12. The Many Ways of Building the Same Body	175
PART III: COMMON PRINCIPLES	193
13. Neutral Spaces	195
14. Evolvability and Neutral Mutations	217
15. Redundancy of Parts or Distributed Robustness?	228
16. Robustness as an Evolved Adaptation to Mutations	247

17. Robustness as an Evolved Adaptation to Environmental Change and Noise	270
18. Robustness and Fragility: Advantages to Variation and Trade-offs	281
PART IV: ROBUSTNESS BEYOND THE ORGANISM	295
19. Robustness in Natural Systems and Self-Organization	297
20. Robustness in Man-made Systems	310
Epilogue: Seven Open Questions for Systems Biology	321
<i>Bibliography</i>	323
<i>Index</i>	359
