Preface	xi
1. Introduction: The Rise, Fall, and Rise Again of Metacommunity Ecology	1
1.1. The indelible influence of scale	3
1.2. The metacommunity framework allows simultaneous consideration of multiple processes at multiple scales	5
1.3. Discrete versus continuous metacommunities	9
1.4. A brief history of metacommunity ecology	13
1.5. MacArthur's paradox: Determinism versus stochasticity and the null model wars	15
1.6. Reemergence of the metacommunity perspective: 1990s and 2000s	18
1.7. A prospectus for metacommunity ecology: What are we trying to do in this book?	19
1.8. Moving forward: Overview of the rest of the book	20
1.9. A final note on our assumptions	21
2. The Theories of Metacommunities	23
2.1. An overview and critical analysis of the four archetypes of metacommunity ecology	27
2.2. Comparing and contrasting the archetypes	34
2.3. Exploring metacommunity ecology at the interface of the archetypes	37
2.4. Is there an "ubermodel"?	42
2.5. The influence of local coexistence mechanisms	46
2.6. Conclusions	47
3. Processes in Metacommunities	49
3.1. Resource utilization and response	51
3.2. Evidence for demographic stochasticity and drift	54
3.3. Dispersal limitation	62

3.4. Interactions between stochasticity, dispersal, and interspecific effects	74
3.5. The influence of habitat heterogeneity	77
3.6. Interactions between habitat heterogeneity and dispersal	84
3.7. Implications for local versus regional controls on diversity	87
3.8. Conclusions and synthesis	88
4. Metacommunity Patterns in Space	90
4.1. Patterns of SADs and related diversity metrics	92
4.2. Null models and co-occurrence in metacommunities	94
4.3. Elements of metacommunity structure	99
4.4. Using variation partitioning to diagnose spatial, environmental, and random effects	106
4.5. Variation in the relative importance of metacommunity-structuring processes	112
4.6. Factors that influence variation in metacommunity patterns	117
4.7. Contributions of different species and different localities to the overall metacommunity pattern	126
4.8. How well can we hope to do in explaining metacommunity structure?	127
4.9. Caveats and conclusions	129
5. Interactions between Time and Space in Metacommunities	131
5.1. Temporal turnover: What does theory predict?	133
5.2. Patterns of temporal turnover	135
5.3. How time can influence deterministic community assembly	140
5.4. Priority effects and multiple stable equilibria in metacommunities	141
5.5. Endpoint assembly cycles	144
5.6. Frequency-dependent coexistence in spatially continuous metacommunities	147
5.7. Conclusions	149
6. What Can Functional Traits and Phylogenies Tell Us about Coexistence in Metacommunities?	151
6.1. A brief history of trait- and phylogeny-based “assembly rules”	154
6.2. The correlation between phylogenetic and trait-based information and “real” metacommunity processes	158
6.3. Trait and phylogenetic over- or underdispersion: What does coexistence theory predict?	162

6.4. Phylogenetic and functional-trait dispersions in a simple SS metacommunity	167
6.5. Phylogenetic and trait dispersions in non-SS metacommunity archetypes	173
6.6. Conclusions	175
7. Combining Taxonomic and Functional-Trait Patterns to Disentangle Metacommunity Assembly Processes	177
7.1. Using functional information to enhance taxonomic pattern analysis	179
7.2. Using functional information to enhance analyses of change through space or time	184
7.3. Toward a trait-based theory of metacommunity assembly	189
7.4. Closing the loop: Predicting species abundance and distribution from traits	197
7.5. Conclusions	200
8. Eco-evolutionary Dynamics in Metacommunities	202
8.1. Building an evolutionary ecology of metacommunities	204
8.2. Adaptive evolution in metapopulations and metacommunities	205
8.3. The community monopolization hypothesis	207
8.4. Evolution toward neutrality	219
8.5. Frequency-dependent evolution	226
8.6. The interaction of community monopolization and neutral evolution	228
8.7. The interaction between community monopolization and neutral evolution in the “real” world?	233
8.8. Conclusions	236
9. Macroevolution in Metacommunities	239
9.1. How metacommunity processes influence phylogeny and radiations	241
9.2. Historical effects	245
9.3. Synthesis: A research agenda for integrating evolutionary and ecological processes that affect biodiversity	250
9.4. Conclusions	254
10. The Macroecology of Metacommunities	255
10.1. What is macroecology?	257
10.2 Synthesizing biodiversity macroecology processes and patterns	262

10.3	Dissecting biodiversity macroecology patterns	267
10.4	The role of metacommunity assembly processes in biodiversity macroecology patterns	274
10.5	Diversity partitioning and the SAR	276
10.6	Metacommunity assembly and the nested SAR	277
10.7	Metacommunity assembly and the ISAR	279
10.8	Biodiversity in the Anthropocene	283
10.9	Metacommunities and contemporary biogeography: Scale-dependent patterns of species diversity along ecological gradients	294
10.10	Other macroecological patterns	300
10.11	Conclusions	301
11.	Food Webs in Metacommunities	303
11.1	How do spatial processes and trophic interactions combine to influence coexistence in simple metacommunities?	304
11.2	How do trophic interactions influence metacommunity processes?	306
11.3	Toward a theory for trophically structured metacommunities	310
11.4	Spatial processes and May's diversity-stability theory	319
11.5	Frequency dependence and feedbacks between trophic interactions and spatial processes	324
11.6	Food-web metacommunity assembly processes and the scale-dependent productivity-diversity relationship	327
11.7	The influence of metacommunity processes on food-web structure and indirect interactions	332
11.8	Conclusions	333
12.	Community Assembly and the Functioning of Ecosystems in Metacommunities	335
12.1	The role of spatial processes in mediating BEF relationships	339
12.2	A simple framework based on resource competition in a metacommunity context	342
12.3	Ecosystems within metacommunities as CASs?	359
12.4	Do ecosystems have regular features?	363
12.5	Conclusions	368
13.	From Metacommunities to Metaecosystems	369
13.1	Why spatial dynamics are so important in ecosystems	371
13.2	Elements of metaecosystems ecology	373

13.3. An emerging set of principles?	377
13.4. Conclusions	379
14. A Coming Transition in Metacommunity Ecology	380
14.1. The accomplishments of metacommunity ecology version 1.x	382
14.2. Synthesis through metacommunity ecology	384
14.3. The current status and limitations of metacommunity version 1.9	385
14.4. Going from version 1.9 to version 2.0	387
14.5. From basic to applied metacommunity ecology	389
14.6. Conclusions	391
References	393
