CONTENTS

Chapter 1	Introduction	**1**
Chapter 2	The Mechanism of the Radiobiological Effect	**5**
	2.1. Physical Stage	*6*
	2.2. Chemical Stage	*15*
	2.3. Oxygen Effect	*19*
	2.4. Biological Stage	*23*
Chapter 3	The Influence of Oxygen and N2O on DNA Damage by Ionizing Particles	**25**
	3.1. Introduction to the Radiobiological Mechanism	*26*
	3.2. Dose Dependence of DSB Numbers	*29*
	3.3. Radical Clusters and Processes in the Chemical Stage	*30*
	3.4. Mathematical Simulation of the Chemical Stage	*33*
	3.5. Analysis of Experimental Data	*43*
	3.6. Final Evaluation	*47*

Chapter 4 The Chemical Stage and DSB Formation in Chromosomes **49**
4.1. The Biological Effect of Ionizing Radiation *50*
4.2. Mathematical Modeling of Processes Running in Diffusing Clusters *52*
4.3. Specification of the Model According to Data Kind *53*
4.4. Analysis of Experimental Data *57*
4.5. Final Evaluation *60*

Chapter 5 Chemical Stage Simulation Using Continuous Petri Nets **63**
5.1. Main Characteristics of the Mathematical Model *64*
5.2. Continuous Petri Nets and the Evolution of the Chemical Stage *66*
5.3. Analysis of Experimental Data under Anoxic Conditions *79*
5.4. Processes in the Chemical Stage in the Presence of Oxygen *86*
5.5. Contribution of Petri Nets *93*

Chapter 6 Analysis of Subsequent Mechanisms in Cells **95**
6.1. DNA as a Target for Radiation Damage *96*
6.2. Modeling of Radiobiological Effects *109*
6.3. Probabilistic Two-Stage Model *124*
6.4. Analysis of Experimental Data *131*
Conclusion *134*
