Preface and acknowledgments *page vii*

## **PART I PRINCIPLES OF COMPLEX FUNCTIONS IN ROBUST MACHINES** 1

**1 Robust Self-replicating Machines Shaped by Evolution** 3

**2 Complex Functions of Robust Machines with Emergent Properties** 25

**3 Integrated Complex Functions with Dynamic Feedback** 50

**4 Cells Exhibit Multiple States, Each with Different Functions** 69

**5 Life at Low Reynolds Number and the Mesoscale Leads to Stochastic Phenomena** 95

## **PART II DESIGN AND OPERATION OF COMPLEX FUNCTIONS** 117

**6 Engineering Lipid Bilayers to Provide Fluid Boundaries and Mechanical Controls** 119

**7 Membrane Trafficking: Flow and Barriers Create Asymmetries** 145

**8 Signaling and Cell Volume Control through Ion Transport and Volume Regulators** 166

**9 Structuring a Cell by Cytoskeletal Filaments** 190

<b>10 Moving and Maintaining Functional Assemblies with Motors</b>	219
<b>11 Microenvironment Controls Life, Death, and Regeneration</b>	243
<b>12 Adjusting Cell Shape and Forces with Dynamic Filament Networks</b>	265
<b>13 DNA Packaging for Information Retrieval and Propagation</b>	291
<b>14 Transcribing the Right Information and Packaging for Delivery</b>	308
<b>15 Turning RNA into Functional Proteins and Removing Unwanted Proteins</b>	324
<b>PART III COORDINATION OF COMPLEX FUNCTIONS</b>	341
<b>16 How to Approach a Coordinated Function: Cell Rigidity-sensing and Force Generation across Length Scales</b>	343
<b>17 Integration of Cellular Functions for Decision Making</b>	364
<b>18 Moving from Omnipotency to Death</b>	384
<b>19 Cancer versus Regeneration: The Wrong versus Right Response to the Microenvironment</b>	402
Index	422
