

CONTENTS

LIST OF SYMBOLS	4
1 INTRODUCTION	7
2 A BRIEF DESCRIPTION AND DERIVATION OF BASIC INTEGRAL EQUATIONS FOR THREE DIMENSIONAL PROBLEMS	9
2.1 The problem of elasticity	9
2.2 The thermoelastic problem—the steady-state temperature field	11
2.3 The thermoelastic problem—the unsteady-state temperature field	14
3 NUMERICAL SOLUTION OF GIVEN EQUATIONS	17
3.1 Surface discretization and transformation into a system of algebraic equations	17
3.2 Analytical computation of the coefficients of the system	19
3.3 Numerical computation of the coefficients of the system	24
3.4 Computation of the right-hand sides of the system of steady-state and unsteady-state heat conduction	25
4 COMPLETE SOLUTION OF THE PROBLEM	30
5 DESCRIPTION OF THE BELIN PROGRAMME	32
5.1 Reading and checking the input data	32
5.2 Printer listing of the results	34
5.3 Evaluation of a distorted and undistorted mesh	35
6 SOME CONCRETE TASKS COMPUTED ON THE BELIN PROGRAMME	38
6.1 Testing tasks	38
6.2 Gear teeth	44
6.3 Steam turbine casing	51
6.4 Press frame distortion	53
7 CONCLUSION	57
LITERATURE	58
