

## CONTENTS

<i>Preface</i>	xi
<i>Introduction</i>	1
1 <i>On the History of Scientific Disciplines</i>	9
The Sociological Perspective	19
The Biographical Approach	28
2 <i>The Institutional Settings</i>	33
Chemistry in France and Germany	33
The Emergence of Research Institutes	43
Physiological Chemistry and Chemical Physiology	50
The International Scene	71
The United States and Canada	79
Scientific Societies and Publications	97
3 <i>Philosophy, Chemistry, and Biology</i>	100
The Unity of Science?	105
Philosophy and Chemistry	107
Philosophy and Biology	110
4 <i>From Ferments to Enzymes</i>	117
The Problem of Fermentation in 1800	117
Microorganisms as Agents of Fermentation	128
Pasteur and Molecular Dissymmetry	133
From Pasteur to Nägeli	135
From Diastase to Zymase	144
The Specificity and Kinetics of Enzyme Action	151
The Enzyme Theory of Life	157

5	<i>The Nature and Function of Proteins</i>	161
	The Albuminoid Nature of Protoplasm	166
	The Organic Chemistry of Proteins, 1830–1860	171
	Amino Acids and Peptones	179
	From Peptones to Peptides	186
	The Multiplicity and Individuality of Proteins	190
	From Colloids to Macromolecules	196
	The Peptide Theory Revisited	207
	Chromatography	212
	The Structure of Proteins	215
	Proteins as Enzymes	221
	Proteins as Antibodies	225
	Protein-Protein Interaction	232
6	<i>Chemical Energy of Biological Systems</i>	234
	Liebig and Biological Oxidation	237
	The Role of Hemoglobin	240
	Intracellular Biological Oxidation	243
	Thermochemistry and Thermodynamics	246
	The Activation of Oxygen	254
	The Role of Iron in Intracellular Respiration	261
	Cytochrome and Cytochrome Oxidase	265
	The Dehydrogenases	271
	Intracellular Electron Carriers	278
	Alcoholic Fermentation as Oxidation-Reduction	289
	Chemical Energetics of Muscular Contraction	298
	The Energetics of Anaerobic Glycolysis	304
	The Pasteur Effect	311
	The Citric Acid Cycle	312
	Oxidative Phosphorylation	318
	Active Membrane Transport	323
	Light as a Source of Biochemical Energy	325
7	<i>Pathways of Biochemical Change</i>	333
	Glucose and Glycogen in the Animal Body	338
	The Biosynthesis of Glycogen	341
	Protein Metabolism and Urea Synthesis	348
	The Biosynthesis of Urea	352

The Metabolism of Amino Acids	357
Intermediate Steps in Metabolic Processes	360
The Metabolism of Fatty Acids	363
Isotopes in Metabolic Research	367
The Fixation of Carbon Dioxide	373
The Biosynthesis of Steroids	375
The Biosynthesis of Porphyrins	379
Mutants in Metabolic Research	383
Biological Nitrogen Fixation	386
8 <i>The Chemical Basis of Heredity</i>	389
Fertilization, Development, and Inheritance	389
Nuclein and Heredity	392
Chemistry of Nucleic Acids and Associated Proteins	398
The Theory of the Gene	418
The Biochemical Genetics of Bacteria and Viruses	437
DNA Replication and Recombination	447
The Role of RNA in Protein Synthesis	454
From Enzyme Adaptation to the Operon	459
The Genetic Code	461
The Multiple Roles of RNA	464
The Elongation of Peptide Chains	468
Site-Specific <i>In Vitro</i> Mutagenesis	473
9 <i>The Whole and Its Parts</i>	474
Chemical Messengers	474
Homeostatis	479
Allostery	483
Second Messenger	485
Protein Kinases and Phosphoprotein Phosphatases	487
Receptors for Hormones and Neurotransmitters	489
<i>Notes</i>	495
<i>List of Abbreviations</i>	554
<i>Bibliography</i>	560
<i>Index of Names</i>	745
<i>Index of Subjects</i>	769
