1 Microsatellites and other simple sequences: genomic context and mutational mechanisms 1

John M. Hancock

Introduction 2

Cryptic simplicity 2

Genomic distribution 4

Microsatellite sequences 5

Mutational mechanisms of change in microsatellites 6

2 Functional roles of microsatellites and minisatellites 10

Yechezkel Kashi and Morris Soller

Introduction 11

Microsatellites are conserved in relation to coding sequences 11

Promoter regions containing microsatellites serve as enhancer elements in expression constructs 12

The number of repeat elements in a microsatellite or minisatellite tract affects expression and protein binding 16

Repeat number variation of microsatellite tracts in coding regions in relation to gene expression and function 19

Phenotypic effects of microsatellite repeat-number variation 20

Conclusion 22

3 Minisatellites and mutation processes in tandemly repetitive DNA 24

John A.L. Armour, Santos Alonso Alegre, Sue Miles, Louise J. Williams and Richard M. Badge

Satellites, minisatellites and microsatellites 25

Minisatellite mutation 27

Comparisons with microsatellites 32

4 Mechanistic basis for microsatellite instability 34

Jonathan A. Eisen

Introduction 35

Microsatellite mutation models 36

Slip-strand mispairing replication errors	37
Correcting SSM errors I: exonucleolytic proofreading	41
Correcting SSM errors II: mismatch repair	43
Additional factors that influence microsatellite stability	47
Conclusions and summary	48

5 Microsatellite evolution: inferences from population data 49

Arnaud Estoup and Jean-Marie Cornuet

Introduction 50

Theoretical mutation models: description and evaluation from population data 50

Estimates for size homoplasy from natural populations 56

Correlation between structural features and level of polymorphism 58

Mutational biases, allele size constraints and evidence for selection 61

Conclusion and perspective 64

6 A comparative approach to the study of microsatellite evolution 66

William Amos

Introduction 66

Aspects of microsatellite evolution 68

Conclusions 78

7 Trinucleotide expansion mutations cause diseases which do not conform to classical Mendelian expectations 80

David C. Rubinsztein

Introduction 81

Clinical and molecular features of trinucleotide repeat diseases 81

Mutational processes of trinucleotide repeats 92

Conclusions 96

8 Mutation and migration in models of microsatellite evolution 98

Marcus W. Feldman, Jochen Kumm and Jonathan Pritchard

Introduction 98

Moran's formulation: a generalized SMM 99

An application of \hat{V} 101

Tri- and tetranucleotides 102

Genetic distances for stepwise mutation models 103

Application of $(\delta\mu)^2$ 105

Dynamics of microsatellites in an island model 108

More on statistical measures of subdivision 113

Models with mutational constraints 114

- 9 The coalescent and microsatellite variability 116**
Peter Donnelly
Introduction 116
The coalescent 117
Modelling the microsatellite mutation process 121
Applications of coalescent methods 122
- 10 Estimating the age of mutations using variation at linked markers 129**
David E. Reich and David B. Goldstein
Introduction 129
Estimating the age of the mutation when almost all chromosomes have the ancestral haplotype 130
A comprehensive approach for estimating the age of a mutation 131
Variance of the age estimate 133
Age of the *CCR5-Δ32* AIDS resistance allele 134
Estimating a variance for the date by reconstructing the genealogy of *CCR5-Δ32* 136
The analysis of new data sets 137
- 11 Statistics of microsatellite loci: estimation of mutation rate and pattern of population expansion 139**
Ranajit Chakraborty and Marek Kimmel
Introduction 140
Model of microsatellite variability 141
Inference regarding mutation rates, population-size expansion and allele-size constraints 143
Data analysis 147
Conclusions 149
- 12 Using microsatellites to measure the fitness consequences of inbreeding and outbreeding 151**
J.M. Pemberton, D.W. Coltman, T.N. Coulson and J. Slate
Introduction 152
Materials and methods 154
Results 157
Discussion 162
- 13 Microsatellites in conservation genetics 165**
Mark A. Beaumont and Michael W. Bruford
Introduction 166
Advantages and drawbacks 166
Case studies 169

- Alternative methods of data analysis in conservation biology 173
- Future trends in genetic analysis for conservation 180
- 14 Microsatellites and the reconstruction of the history of human populations 183**
 - Andrés Ruiz Linares
 - Introduction 184
 - Genetics and modern human origins 184
 - Microsatellites and the problem of modern human origins 187
 - A regional case study: the origin of native Americans 193
 - Conclusion 196
- 15 Forensic applications of microsatellite markers 198**
 - David Balding
 - Introduction and overview 198
 - Background: MLP and SLP profiling systems 199
 - STR profiles 201
 - Weight of evidence for DNA profiles 202
 - STR match probabilities 204
 - Identification example 206
 - Relatedness testing 207
 - Mixed profiles 209
- 16 Tracking linkage disequilibrium in admixed populations with MALD using microsatellite loci 211**
 - J. Claiborne Stephens, Michael W. Smith, Hyoung Doo Shin and Stephen J. O'Brien
 - Introduction 212
 - Microsatellite marker maps useful for MALD 213
 - Modes of analysis 215
 - Results 217
 - Discussion 223
- 17 Microsatellite markers in complex disease: mapping disease-associated regions within the human major histocompatibility complex 225**

 - Materials and methods 228
 - Results 229
 - Discussion 236

18 Microsatellites, a neutral marker to infer selective sweeps 238

Christian Schlötterer and Thomas Wiehe

Introduction 239

The concept of selective sweeps 239

Microsatellites and selective sweeps 240

Detecting selective sweeps with microsatellite analysis 240

Identification of local selective sweeps 244

Perspective 247

19 Y chromosome microsatellite haplotypes and the history of Samoyed-speaking populations in north-west Siberia 249

T. Karafet, L. P. Osipova, O. L. Posukh, V. Wiebe and M. F. Hammer

Introduction 250

Subject and methods 251

Results 255

Discussion 261

Conclusions 264

20 Microsatellite analysis of human tumours 266

Darryl Shibata

Introduction 267

Microsatellite loci as molecular tumour clocks 267

Tumour progression: a great mystery and problem 267

Experimental strategies: extracting phylogenetic information from tissues 269

Experimental systems: observing microsatellite changes in tissues 272

Summary 273
