
Contents

1	What Is a Randomized Controlled Trial?	1
1.1	Definition and Key Features	1
1.2	Historical Context and the Nature of RCTs	2
1.2.1	Historical Background	2
1.2.2	Impact of RCTs and Importance of Statistics	3
1.2.3	Ethical Issues	4
1.3	Structure and Justification of RCTs	5
1.3.1	Eligible Patients	5
1.3.2	The Need for Concurrent Controls	8
1.3.3	Allocation at Random	10
1.3.3.1	Comparable Groups	10
1.3.3.2	Allocation Unknown at Entry to the RCT	11
1.3.3.3	Valid Estimate of Error	11
	Exercises	12
2	Bias	15
2.1	What Is Meant by Bias in RCTs?	15
2.2	Types of Bias	16
2.2.1	Selection Bias	17
2.2.2	Allocation Bias	20
2.2.3	Assessment Bias	21
2.2.4	Publication Bias	21
2.2.5	Stopping Rules	22
	Exercises	22
3	How Many Patients Do I Need?	25
3.1	Criteria for Sample Size Calculations	25
3.1.1	The Primary Question	26
3.1.2	Adequate Evidence	27
3.2	Hypothesis Tests	27
3.2.1	General Remarks	27
3.2.2	Implication for RCTs	28
3.2.3	One-Sided vs. Two-Sided Tests	29
3.3	Sample Size for a Normally Distributed Variable	30
3.4	Sample Size for a Binary Variable	34
3.4.1	Formulation	34
3.4.2	The Delta Method	35
3.4.3	Sample Size Formula	36

3.5	General Remarks about Sample Size Calculations	38
	Exercises	39
4	Methods of Allocation.....	43
4.1	Simple Randomization.....	43
4.1.1	Chance Imbalance of Group Sizes.....	43
4.1.2	Distribution of λ	45
4.1.3	Practical Consequences	45
4.2	Random Permuted Blocks.....	46
4.2.1	Random Permuted Blocks of Fixed Length.....	46
4.2.2	RPBs with Random Block Length	47
4.3	Biased Coin Designs and Urn Schemes.....	49
4.3.1	Biased Coin Designs	49
4.3.2	Urn Models	50
4.4	Unequal Randomization.....	53
4.5	Stratification.....	54
4.5.1	The Problem of Allocation Bias	54
4.5.2	Using Stratification.....	57
4.6	Minimization	58
4.6.1	Minimization for Two-Treatment Trials	58
	Exercises	61
5	Assessment, Blinding, and Placebos	65
5.1	Double and Single Blindness.....	65
5.1.1	General Principles	65
5.2	Placebos	67
5.2.1	The Placebo Effect.....	67
5.2.2	The Role of Placebos in Blinding	69
5.3	Practical Considerations	70
	Exercises	71
6	Analysis of Results.....	73
6.1	Example.....	73
6.2	Use of Confidence Intervals.....	73
6.3	Baselines: Uses and Abuses	76
6.3.1	Comparison of Baseline Values	77
6.3.2	Analyzing Change from Baseline.....	77
6.3.3	An Erroneous Analysis Based on Change from Baseline	79
6.4	Analysis of Covariance.....	80
6.4.1	Baseline Bias Leads to Outcome Bias	80
6.4.2	Interlude: Bivariate Normal Variables.....	81
6.4.3	Allowing for Baseline Imbalance: The Theory.....	83
6.4.4	Allowing for Baseline Imbalance: The Practice	85
6.4.5	Conditional vs. Unconditional Inference	88

6.4.6	Some General Remarks on Covariates	89
6.4.6.1	Choice of Analysis	89
6.4.6.2	Other Types of Covariate	89
6.4.6.3	Which Covariates Should Be Used?	89
	Exercises	91
7	Further Analysis: Binary and Survival Data	95
7.1	Binary Data: An Example and a Statistical Model	95
7.2	Point Estimates and Hypothesis Tests	96
7.2.1	Methods Based on Informal Derivations	96
7.2.2	Methods Based on More Formal Derivations	99
7.3	Interval Estimates for the Binary Case	101
7.3.1	Different Measures of Difference between Treatments.....	101
7.3.2	Interval Estimates or Confidence Intervals	102
7.3.2.1	Interval Estimates for ARD and NNT.....	102
7.3.2.2	Problems with the Confidence Interval for ARD and a Simple Solution.....	104
7.3.2.3	Interval Estimates for RR and OR	107
7.3.2.4	Summary of Results	109
7.4	Adjusting Binary Outcomes for Baseline Observations.....	110
7.4.1	Using a Logistic Model	110
7.4.2	Fitting a Logistic Regression	112
7.4.3	Adjusting the OR in the PUVA vs. TL-01 Trial.....	114
7.4.4	An Alternative Approach.....	117
7.4.4.1	The Hypergeometric Distribution.....	117
7.4.4.2	The Mantel-Haenszel Method.....	119
7.5	Survival Analysis.....	123
7.5.1	The Hazard Function, the Survival Curve, and Some Estimators	124
7.5.1.1	The Kaplan-Meier Estimator.....	126
7.5.1.2	Parametric Estimators	126
7.5.2	Comparing Survival Curves.....	130
7.5.3	Adjusting Survival Analyses for Baseline Values.....	133
7.6	Analyses Using Randomization Models	138
7.6.1	Randomization Models: Simple Randomization	138
7.6.2	Randomization Models: Stratified Randomization	142
7.6.2.1	Stratified Randomization: Exact Analysis	146
7.6.2.2	Blocked Allocations	147
	Exercises	147
8	Monitoring Accumulating Data	149
8.1	Motivation and Problems with Repeated Analysis of Data.....	149
8.2	Sequential and Group Sequential Methods	151
8.2.1	Using Repeated Significance Tests	151

8.2.2	Some Theory for Group Sequential Designs with Normal Outcomes.....	153
8.2.3	Other Forms of Stopping Rule.....	155
8.3	Other Approaches to Accumulating Data.....	158
8.3.1	SPRT and Triangular Test.....	158
8.3.2	Bayesian and Likelihood Approaches.....	160
8.3.3	Adaptive Allocation.....	161
8.4	Data Monitoring Committees.....	162
	Exercises.....	164
9	Subgroups and Multiple Outcomes.....	165
9.1	The Role of Subgroups in Randomized Clinical Trials.....	165
9.2	Methods for Comparing Subgroups.....	166
9.2.1	Approximate Theory.....	166
9.2.2	Practice: Continuous Outcomes.....	167
9.2.2.1	An Erroneous Analysis.....	168
9.2.3	Practice: Binary Outcomes.....	169
9.3	Methods of Selecting Subgroups.....	170
9.4	Qualitative Interactions.....	172
9.5	Multiple Outcomes.....	174
9.6	Correction of <i>P</i> -Values.....	176
9.6.1	Boole's Inequality.....	176
9.6.2	Application to RCTs.....	176
9.7	Some Alternative Methods for Multiple Outcomes.....	177
9.7.1	Extension to Bonferroni Inequality.....	178
9.7.2	Multivariate Methods.....	178
9.7.3	O'Brien's Rank-Based Method.....	180
	Exercises.....	180
10	Protocols and Protocol Deviations.....	183
10.1	Protocols: Their Nature and Role.....	183
10.2	Protocol Deviation.....	184
10.2.1	Ineligible Patients.....	185
10.2.2	Administration of Treatment Other than That Allocated.....	186
10.3	Analysis by Intention-to-Treat.....	188
10.3.1	Informal Description.....	188
10.3.2	Theoretical Description.....	189
	Exercises.....	191
11	Some Special Designs: Crossovers, Equivalence, and Clusters.....	193
11.1	Crossover Trials.....	193
11.2	The AB/BA Design.....	194
11.3	Analysis of AB/BA Design for Continuous Outcomes.....	194
11.3.1	The Theory.....	194

11.3.2	An Application	196
11.4	The Issue of Carryover	197
11.5	Equivalence Trials	199
11.5.1	General Remarks	199
11.5.2	Sample Sizes for Equivalence Trials with Normally Distributed Outcomes	200
11.5.3	Comparison of Conventional and Equivalence Trials	202
11.6	Cluster Randomized Trials	202
11.6.1	Introduction and Rationale	202
11.6.2	Methods of Analysis for Cluster-Randomized Trials	205
11.6.3	Sample Size Estimation for Continuous Outcomes from Cluster-Randomized Trials	206
11.6.4	General Remarks about Cluster-Randomized Trials	207
Exercises	208
12	Meta-Analyses of Clinical Trials	211
12.1	What Are Meta-Analyses, and Why Are They Needed?	211
12.2	Some Methodology for Meta-Analysis	213
12.2.1	Data Collection	213
12.2.2	Estimating the Overall Effect Using a Fixed-Effects Model	213
12.2.3	Estimating the Overall Effect Using a Random-Effects Model	215
12.3	Some Graphical Methods for Meta-Analysis	217
12.3.1	Meta-Analysis Diagrams	217
12.3.2	Sensitivity Plots for Random-Effects Analysis	218
12.3.3	Funnel or Radial Plots	219
12.4	Some General Issues in Meta-Analysis	221
12.4.1	Random-Effects and Intertrial Variation	221
12.4.2	Position of Meta-Analysis	221
Exercises	222
Further Reading	223
Books on Clinical Trials in General	223
Books on More Specialized Topics	224
Solutions to Exercises	227
