

# Contents

Preface xvii

## 1 Introduction 1

- 1.1 Microorganisms as Cells 2
- 1.2 Cell Structure 8
- 1.3 Classification of Living Organisms 10
- 1.4 Populations, Communities, and Ecosystems 11
- 1.5 The Impact of Microorganisms on Human Affairs 13
- 1.6 A Brief History of Microbiology 15
- Study Questions 20
- Supplementary Readings 20

## 2 Cell Chemistry 21

- 2.1 Atoms 21
- 2.2 Molecules and Chemical Bonding 22
- 2.3 Water as a Biological Solvent 25
- 2.4 Small Molecules: Monomers 26
- 2.5 From Carbohydrates to Polysaccharides 26
- 2.6 From Fatty Acids to Lipids 29
- 2.7 From Nucleotides to Nucleic Acids 29
- 2.8 From Amino Acids to Proteins 33
- 2.9 Stereoisomerism 37
- Study Questions 38
- Supplementary Readings 38

## 3 Cell Biology 39

- 3.1 Prokaryotic and Eukaryotic Cell Structure 39
- 3.2 The Importance of Being Small 43
- 3.3 Cell Membrane: Structure 47

- 3.4 Cell Membrane: Function 50
- 3.5 Cell Wall: Eubacteria 54
- 3.6 Cell Wall: Eucaryotes 62
- 3.7 Flagella and Motility 64
- 3.8 Chemotaxis in Bacteria 67
- 3.9 Motility in Eucaryotes 70
- 3.10 Bacterial Cell Surface Structures and Cell Inclusions 72
- 3.11 Gas Vesicles 77
- 3.12 Bacterial Endospores 79
- 3.13 Arrangement of DNA in Prokaryotes 81
- 3.14 Eucaryotic Nucleus 83
- 3.15 Eucaryotic Organelles 85
- 3.16 Relationships of Chloroplasts and Mitochondria to Bacteria 87
- 3.17 Comparisons of the Prokaryotic and Eucaryotic Cell 88
- Study Questions 90
- Supplementary Readings 91

## 4 Nutrition, Metabolism, and Biosynthesis 92

- 4.1 Energy 93
- 4.2 Activation Energy, Catalysis, and Enzymes 95
- 4.3 Oxidation-Reduction 97
- 4.4 Electron Carriers 99
- 4.5 High Energy Phosphate Compounds and Adenosine Triphosphate (ATP) 100
- 4.6 Energy Release in Biological Systems 101
- 4.7 Fermentation 102
- 4.8 Respiration 104
- 4.9 Electron Transport Systems 105
- 4.10 Energy Conservation in the Electron Transport System 107
- 4.11 Carbon Flow: The Tricarboxylic Acid Cycle 110
- 4.12 The Balance Sheet of Aerobic Respiration 111

- 4.13 Turnover of ATP and the Role of Energy-Storage Compounds 113
- 4.14 Alternate Modes of Energy Generation 113
- 4.15 Biosynthetic Pathways: Anabolism 114
- 4.16 Sugar Metabolism 115
- 4.17 Amino Acid Biosynthesis 116
- 4.18 Purine and Pyrimidine Biosynthesis 118
- 4.19 Regulation of Enzyme Activity 119
- 4.20 Microbial Nutrition 121
- 4.21 Laboratory Culture of Microorganisms 123
- 4.22 Sterilization and Aseptic Technique 127
- 4.23 Procedures for Isolating Microorganisms from Nature 128
  - Study Questions 130
  - Supplementary Readings 131

## 5 Macromolecules and Molecular Genetics 132

- 5.1 Overview 133
- 5.2 DNA Structure and DNA Binding Proteins 135
- 5.3 Restriction Enzymes and Their Action on DNA 148
- 5.4 DNA Replication 150
- 5.5 Genetic Elements 154
- 5.6 RNA Structure and Function 156
- 5.7 Transfer RNA 162
- 5.8 Translation: The Process of Protein Synthesis 164
- 5.9 The Genetic Code 168
- 5.10 Regulation of Protein Synthesis: Induction and Repression 171
- 5.11 Regulation of Protein Synthesis: Positive Control 174
- 5.12 Attenuation 176
- 5.13 Contrasts Between Gene Expression in Prokaryotes and Eucaryotes 177
  - Study Questions 178
  - Supplementary Readings 180

## 6 Viruses 181

- 6.1 The Nature of the Virus Particle 182
- 6.2 The Virus Host 186
- 6.3 Quantification of Viruses 187
- 6.4 General Features of Virus Reproduction 189
- 6.5 Steps in Virus Multiplication 191

- 6.6 Viral Genetics 195
- 6.7 General Overview of Bacterial Viruses 196
- 6.8 RNA Bacteriophages 197
- 6.9 Single-Stranded Icosahedral DNA Bacteriophages 198
- 6.10 Single-Stranded Filamentous DNA Bacteriophages 200
- 6.11 Double-Stranded DNA Bacteriophages: T7 201
- 6.12 Large Double-Stranded DNA Bacteriophages 203
- 6.13 Temperate Bacterial Viruses: Lysogeny 205
- 6.14 A Transposable Phage: Bacteriophage Mu 210
- 6.15 General Overview of Animal Viruses 213
- 6.16 Small RNA Animal Viruses 218
- 6.17 Negative-Strand RNA Viruses 219
- 6.18 Double-Stranded RNA Virus: Reoviruses 222
- 6.19 Replication of DNA Viruses of Animals 223
  - 6.20 Herpesviruses 225
  - 6.21 Pox Viruses 226
  - 6.22 Adenoviruses 228
  - 6.23 Retroviruses 229
  - Study Questions 233
  - Supplementary Readings 234

## 7 Microbial Genetics 235

- 7.1 Mutations and Mutants 235
- 7.2 The Molecular Basis of Mutation 238
- 7.3 Mutagens 240
- 7.4 Mutagenesis and Carcinogenesis: the Ames Test 243
- 7.5 Genetic Recombination 244
- 7.6 Genetic Transformation 247
- 7.7 Transduction 251
- 7.8 Plasmids 254
- 7.9 Kinds of Plasmids and Their Biological Significance 257
- 7.10 Conjugation and Chromosome Mobilization 261
- 7.11 An Overview of the Bacterial Genetic Map 265
- 7.12 Transposons and Insertion Sequences 267
- 7.13 Genetics in Eucaryotic Microorganisms 271
- 7.14 Yeast Genetics 271
- 7.15 Mitochondrial Genetics 274
  - Study Questions 278
  - Supplementary Readings 279

## **8 Gene Manipulation and Genetic Engineering 280**

- 8.1 Gene Cloning Systems 280
- 8.2 Plasmids as Cloning Vectors 281
- 8.3 Bacteriophages as Cloning Vectors 283
- 8.4 Other Vectors 284
- 8.5 Hosts for Cloning Vectors 285
- 8.6 Finding the Right Clone 286
- 8.7 Expression Vectors 289
- 8.8 Synthetic DNA 291
- 8.9 Amplifying DNA: The Polymerase Chain Reaction 291
- 8.10 The Cloning and Expression of Mammalian Genes in Bacteria 293
- 8.11 In Vitro and Site-Directed Mutagenesis 297
- 8.12 Practical Results of Genetic Engineering 297
- 8.13 Genetic Engineering as a Microbial Research Tool 303
- 8.14 Summary of Principles at the Basis of Genetic Engineering 304
- Study Questions 305
- Supplementary Readings 306

## **9 Growth and Its Control 307**

- 9.1 Cell Growth 307
- 9.2 Population Growth 308
- 9.3 Measurement of Growth 309
- 9.4 The Growth Cycle of Populations 312
- 9.5 Growth Yield Versus Growth Rate 313
- 9.6 Continuous Culture 314
- 9.7 Growth and Macromolecular Synthesis 316
- 9.8 Cellular Differentiation and Morphogenesis 318
- 9.9 Effect of Environmental Factors on Growth 321
- 9.10 Temperature 321
- 9.11 Acidity and Alkalinity (pH) 327
- 9.12 Water Availability 328
- 9.13 Oxygen 329
- 9.14 Control of Microbial Growth: Heat Sterilization 333
- 9.15 Filter Sterilization 336
- 9.16 Chemical Control of Microbial Growth 338
- 9.17 Disinfectants and Antiseptics 340
- 9.18 Chemotherapeutic Agents 341
- 9.19 Some Aspects of Food Microbiology 344
- Study Questions 346
- Supplementary Readings 347

## **10 Microbial Biotechnology 348**

- 10.1 Industrial Microorganisms 348
- 10.2 Kinds of Industrial Products 350
- 10.3 Growth and Product Formation in Industrial Processes 352
- 10.4 The Characteristics of Large-Scale Fermentations 354
- 10.5 Scale-Up of the Fermentation Process 357
- 10.6 Production of Mammalian Products by Genetically Engineered Microorganisms 358
- 10.7 Antibiotics 361
- 10.8 Vitamins and Amino Acids 370
- 10.9 Microbial Bioconversion 371
- 10.10 Enzyme Production by Microorganisms 372
- 10.11 Vinegar 374
- 10.12 Citric Acid and Other Organic Compounds 375
- 10.13 Yeasts in Industry 376
- 10.14 Alcohol and Alcoholic Beverages 378
- 10.15 Food From Microorganisms 383
- Study Questions 385
- Supplementary Readings 386

## **11 Host-Parasite Relationships 387**

- 11.1 Microbial Interactions with Higher Organisms 388
- 11.2 Normal Flora of the Skin 388
- 11.3 Normal Flora of the Oral Cavity 389
- 11.4 Normal Flora of the Gastrointestinal Tract 392
- 11.5 Normal Flora of Other Body Regions 396
- 11.6 Nonspecific Host Defenses 397
- 11.7 Entry of the Pathogen into the Host 400
- 11.8 Colonization and Growth 401
- 11.9 Exotoxins 403
- 11.10 Enterotoxins 406
- 11.11 Endotoxins 409
- 11.12 Virulence and Attenuation 410
- 11.13 Interaction of Pathogens with Phagocytic Cells 412
- 11.14 Growth of the Pathogen Intracellularly 416
- 11.15 Inflammation and Fever 418
- 11.16 Chemotherapy 418
- 11.17 Viral Chemotherapy 423
- Study Questions 424
- Supplementary Readings 425

## 12 Immunology and Immunity 426

- 12.1 Immunogens and Antigens 427
- 12.2 Immunoglobulins (Antibodies) 428
- 12.3 Cells of the Immune System 431
- 12.4 Histocompatibility Antigens and T-Cell Receptors 433
- 12.5 The Mechanism of Immunoglobulin Formation 437
- 12.6 Genetics and Evolution of Immunoglobulins and T-Cell Receptors 439
- 12.7 Monoclonal Antibodies 443
- 12.8 Antigen-Antibody Reactions 447
- 12.9 ELISA and Radioimmunoassay 452
- 12.10 Cell-Mediated Immunity 454
- 12.11 Hypersensitivities 457
- 12.12 Immune Tolerance and Autoimmunity 460
- 12.13 Complement 461
- 12.14 Applied Immunology: Immunization against Infectious Diseases 463  
Study Questions 467  
Supplementary Readings 468

## 13 Clinical and Diagnostic Microbiology 469

- 13.1 Isolation of Pathogens from Clinical Specimens 469
- 13.2 Growth-Dependent Identification Methods 474
- 13.3 Testing Cultures for Antibiotic Sensitivity 478
- 13.4 Antibody Titers and the Diagnosis of Infectious Disease 480
- 13.5 Fluorescent Antibodies 482
- 13.6 Monoclonal Antibodies 483
- 13.7 Clinically Useful ELISA Tests 483
- 13.8 Agglutination Tests Used in the Clinical Laboratory 485
- 13.9 Immunoblot Procedures 486
- 13.10 Plasmid Fingerprinting 488
- 13.11 Nucleic Acid Probes in Clinical Diagnostics 488
- 13.12 Diagnostic Virology 491
- 13.13 Safety in the Clinical Laboratory 492  
Study Questions 494  
Supplementary Readings 495

## 14 Epidemiology and Public Health Microbiology 496

- 14.1 The Science of Epidemiology 496
- 14.2 Terminology 497

- 14.3 Disease Reservoirs 498
- 14.4 Epidemiology of AIDS: An Example of How Epidemiological Research is Done 500
- 14.5 Modes of Infectious Disease Transmission 501
- 14.6 Nature of the Host Community 504
- 14.7 Hospital-Acquired (Nosocomial) Infections 506
- 14.8 Public Health Measures for the Control of Epidemics 508
- 14.9 Global Health Considerations 510  
Study Questions 511  
Supplementary Readings 512

## 15 Major Microbial Diseases 513

- 15.1 Airborne Transmission of Pathogens 513
- 15.2 Respiratory Infections: Bacterial 514
- 15.3 *Mycobacterium* and Tuberculosis 520
- 15.4 Respiratory Infections: Viral 522
- 15.5 Why Are Respiratory Infections So Common? 527
- 15.6 Sexually Transmitted Diseases 528
- 15.7 Acquired Immune Deficiency Syndrome (AIDS) 534
- 15.8 Rabies 539
- 15.9 Insect- and Tick-Transmitted Diseases: Rickettsias 541
- 15.10 Insect-Transmitted Diseases: Lyme Disease 544
- 15.11 Insect-Transmitted Diseases: Malaria and Plague 545
- 15.12 Foodborne Diseases 550
- 15.13 Waterborne Diseases 553
- 15.14 Pathogenic Fungi 559  
Study Questions 560  
Supplementary Readings 561

## 16 Metabolic Diversity in Microorganisms 562

- 16.1 Photosynthesis 563
- 16.2 The Role of Chlorophyll and Bacteriochlorophyll in Photosynthesis 564
- 16.3 Anoxygenic Photosynthesis 566
- 16.4 Oxygenic Photosynthesis 570
- 16.5 Additional Aspects of Photosynthetic Light Reactions 572
- 16.6 Autotrophic CO<sub>2</sub> Fixation 574
- 16.7 Lithotrophy: Energy from the Oxidation of Inorganic Electron Donors 576

- 16.8 Hydrogen-Oxidizing Bacteria 577
- 16.9 Sulfur Bacteria 578
- 16.10 Iron-Oxidizing Bacteria 579
- 16.11 Ammonium and Nitrite-Oxidizing Bacteria 582
- 16.12 Autotrophy and ATP Production among Lithotrophs 583
- 16.13 Anaerobic Respiration 585
- 16.14 Nitrate Reduction and the Denitrification Process 586
- 16.15 Sulfate Reduction 588
- 16.16 Carbonate (CO<sub>2</sub>) as an Electron Acceptor 591
- 16.17 Other Electron Acceptors for Anaerobic Respiration 591
- 16.18 Metabolic Diversity among the Organotrophs 592
- 16.19 Sugar Metabolism 598
- 16.20 Organic Acid Metabolism 599
- 16.21 Lipids As Microbial Nutrients 600
- 16.22 Molecular Oxygen (O<sub>2</sub>) as a Reactant in Biochemical Processes 601
- 16.23 Hydrocarbon Transformations 602
- 16.24 Nitrogen Metabolism 604
- 16.25 Nitrogen Fixation 604  
Study Questions 608  
Supplementary Readings 610

## 17 Microbial Ecology 611

- 17.1 Microorganisms in Nature 612
- 17.2 Methods in Microbial Ecology 613
- 17.3 Enrichment and Isolation Methods 614
- 17.4 Identification and Enumeration: Nucleic Acid Probes, Fluorescent Antibodies, and Viable Counts 618
- 17.5 Measurements of Microbial Activity in Nature 621
- 17.6 Stable Isotopes and Their Use in Microbial Biogeochemistry 623
- 17.7 Aquatic Habitats 624
- 17.8 Terrestrial Environments 626
- 17.9 Deep-Sea Microbiology 628
- 17.10 Hydrothermal Vents 630
- 17.11 The Carbon Cycle 634
- 17.12 Methane and Methanogenesis 636
- 17.13 The Rumen Microbial Ecosystem 639
- 17.14 Biogeochemical Cycles: Nitrogen 642
- 17.15 Biogeochemical Cycles: Sulfur 644
- 17.16 Biogeochemical Cycles: Iron 646
- 17.17 Microbial Leaching 649
- 17.18 Biogeochemical Cycles: Trace Metals and Mercury 651
- 17.19 Petroleum and Natural Gas (Methane) Biodegradation 652
- 17.20 Biodegradation of Xenobiotics 654
- 17.21 Sewage and Wastewater Microbiology 657

- 17.22 Plant-Microbe Interactions 659
- 17.23 Agrobacterium/Plant Interactions: Crown Gall and Hairy Root 663
- 17.24 Root Nodule Bacteria and Symbiosis with Legumes 667  
Study Questions 675  
Supplementary Readings 676

## 18 Molecular and Microbial Evolution 677

- 18.1 Evolution of the Earth and Earliest Life Forms 677
- 18.2 Primitive Organisms 680
- 18.3 Origin of Modern Eucaryotes 682
- 18.4 Ribosomal RNAs as Evolutionary Chronometers 684
- 18.5 Microbial Phylogeny as Revealed by Ribosomal RNA Sequencing 687
- 18.6 Eubacteria 690
- 18.7 Archaeobacteria 693
- 18.8 Eucaryotes 694
- 18.9 Characteristics of the Primary Kingdoms 696
- 18.10 Taxonomy, Nomenclature, and Bergey's Manual 698
- 18.11 Molecular Taxonomic Approaches: DNA Base Composition and Nucleic Acid Hybridization 700  
Study Questions 702  
Supplementary Readings 702

## 19 The Bacteria 703

- 19.1 Purple and Green (Phototrophic) Bacteria 703
- 19.2 Cyanobacteria 717
- 19.3 Prochlorophytes 719
- 19.4 Lithotrophs:  
The Nitrifying Bacteria 721
- 19.5 Lithotrophs: Sulfur- and Iron-Oxidizing Bacteria 723
- 19.6 Lithotrophs: Hydrogen-Oxidizing Bacteria 725
- 19.7 Methanotrophs and Methylotrophs 727
- 19.8 Sulfate- and Sulfur-Reducing Bacteria 731
- 19.9 Homoacetogenic Bacteria 733
- 19.10 Budding and/or Appendaged (Prosthecae) Bacteria 734
- 19.11 Spirilla 739
- 19.12 Spirochetes 743
- 19.13 Gliding Bacteria 746
- 19.14 Sheathed Bacteria 752

19.15 The Pseudomonads 753  
 19.16 Free-Living Aerobic Nitrogen-Fixing Bacteria 756  
 19.17 Acetic Acid Bacteria 758  
 19.18 Zymomonas and Chromobacterium 759  
 19.19 Vibrio and Related Genera 760  
 19.20 Facultatively Aerobic Gram-Negative Rods 761  
 19.21 Neisseria and Other Gram-Negative Cocci 765  
 19.22 Rickettsias 766  
 19.23 Chlamydias 767  
 19.24 Gram-Positive Bacteria: Cocci 769  
 19.25 Lactic Acid Bacteria 771  
 19.26 Endospore-Forming Gram-Positive Rods and Cocci 775  
 19.27 Mycoplasmas 779  
 19.28 High GC Gram-Positive Bacteria: The "Actinomycetes" 782  
 19.29 Coryneform Bacteria 782  
 19.30 Propionic Acid Bacteria 784  
 19.31 Mycobacterium 785  
 19.32 Filamentous Actinomycetes 787  
 Supplementary Readings 790

**20 Archaeobacteria 791**

20.1 Archaeobacterial Membranes 791  
 20.2 Archaeobacterial Cell Walls 793  
 20.3 Metabolism and Genetics 794

20.4 Extremely Halophilic Archaeobacteria 796  
 20.5 Methane-Producing Bacteria: Methanogens 800  
 20.6 Extremely Thermophilic Archaeobacteria 807  
 20.7 *Thermoplasma* 812  
 20.8 Limits of Microbial Existence: Temperature 813  
 20.9 Archaeobacteria: Earliest Life Forms? 814  
 Supplementary Readings 814

**21 Eucaryotic Microorganisms 815**

21.1 Algae 815  
 21.2 Fungi 817  
 21.3 Slime Molds 820  
 21.4 Protozoa 822  
 21.5 Eucaryotes in the Microbial World 825  
 Supplementary Readings 825

Appendix 1: Energy Calculations 826  
 Appendix 2: The Mathematics of Growth and Chemostat Operation 830  
 Appendix 3: Bergey's Classification of Bacteria 833  
 Glossary 837  
 Photo Credits 845  
 Index 847
