LIST OF CONTRIBUTORS . . . . .	xi
--------------------------------	----

PREFACE . . . . .	xiii
-------------------	------

## 1. The Paramagnetic Shift

*J. P. Jesson*

I. Introduction . . . . .	2
II. High-Resolution Nuclear Magnetic Resonance in Diamagnetic Systems . . . . .	3
III. Electron Paramagnetic Resonance in the Hydrogen Atom . . . . .	4
IV. High-Resolution Nuclear Magnetic Resonance in a Simple Paramagnetic System . . . . .	9
V. General Treatment of High-Resolution Nuclear Magnetic Resonance Shifts in Paramagnetic Systems . . . . .	12
VI. Application of the General Theory . . . . .	22
VII. Other Factors Affecting the Paramagnetic Shift . . . . .	41
VIII. Summary . . . . .	45
Appendix: Density Matrix Theory . . . . .	45
References . . . . .	51

## 2. The Paramagnetic Linewidth

*T. J. Swift*

I. Introduction . . . . .	53
II. Magnetic Relaxation and the NMR Line Shape . . . . .	54
III. Mechanisms of Nuclear Spin-Lattice Relaxation . . . . .	72
IV. Electron-Spin Relaxation . . . . .	77
References . . . . .	81

### 3. Spin Delocalization and Electronic Structure

*Gerd N. La Mar*

I. Introduction . . . . .	86
II. Spin Density and Electron Correlation. . . . .	87
III. Hyperfine Coupling Constants and Spin Density . . . . .	93
IV. Spin Delocalization and Spin Polarization . . . . .	103
V. Metal-Ligand Covalency . . . . .	118
References . . . . .	123

### 4. Analysis of Isotropic Shifts

*William DeW. Horrocks, Jr.*

I. Introduction . . . . .	128
II. Determination of the Origin of Observed Shifts . . . . .	134
III. Characterization of Contact Shifts by Quantum Mechanical Models. . . . .	157
References . . . . .	175

### 5. Spin Distribution in Organic Ligands

*D. R. Eaton*

I. Introduction . . . . .	179
II. Qualitative Applications of Ligand Spin Density Measurements . . . . .	185
III. The Quantitative Assessment of Spin Density Distributions . . . . .	200
IV. The Effect of Other Ligands on Spin Density Distributions . . . . .	205
V. Conclusion . . . . .	213
References . . . . .	214

### 6. Spin Distribution in Organometallic Compounds

*Michael F. Rettig*

I. Introduction . . . . .	218
II. Bis- $\pi$ -Cyclopentadienyl Complexes: Results . . . . .	219
III. Discussion of Bis- $\pi$ -Cyclopentadienyl Complexes . . . . .	222
IV. Bis-Arene Organometallics: Results . . . . .	232
V. Discussion of Bis-Arene Organometallics . . . . .	235
VI. Contact Shifts of Other Organometallics . . . . .	238
VII. Conclusions . . . . .	240
References . . . . .	241

## 7. Stereochemistry and Structural and Electronic Equilibria

*R. H. Holm and C. J. Hawkins*

I. Introduction . . . . .	243
II. Stereochemistry and Structural Equilibria . . . . .	247
III. Spin Equilibria . . . . .	316
Appendix . . . . .	325
References . . . . .	326

## 8. Dynamics of Intramolecular Rearrangements

*Louis H. Pignolet and Gerd N. La Mar*

I. Introduction . . . . .	334
II. Metal-Centered Rearrangements . . . . .	337
III. Ligand-Centered Rearrangements . . . . .	354
References . . . . .	367

## 9. Solvation and the Second Coordination Sphere

*Cooper H. Langford and Thomas R. Stengle*

I. Introduction . . . . .	372
II. Theory . . . . .	373
III. Applications . . . . .	378
References . . . . .	385

## 10. Novel Structural Studies in Solution

*Gerd N. La Mar*

I. Introduction . . . . .	387
II. Ion Pairing in Solution . . . . .	388
III. Orbital Ground State Symmetry . . . . .	408
References . . . . .	418

## 11. Biological Applications

*W. D. Phillips*

I. Introduction . . . . .	422
II. PMR Characteristics of Proteins . . . . .	422
III. Contact Shifts Induced by Extrinsic Ions . . . . .	426

IV. Heme Proteins . . . . .	435
V. Iron-Sulfur Proteins . . . . .	458
VI. Conclusions . . . . .	474
References . . . . .	475

## 12. Lanthanide Shift Reagents and Other Analytical Applications

*William DeW. Horrocks, Jr.*

I. Introduction . . . . .	479
II. Lanthanide Shift Reagents . . . . .	481
III. Spin Decoupling and Relaxation Enhancement . . . . .	509
IV. Determination of Relative Stability Constants . . . . .	514
References . . . . .	517

## 13. Lanthanide and Actinide Complexes

*R. D. Fischer*

I. Introduction . . . . .	522
II. Important General Features of the Electronic Structure of $f^n$ Systems . . . . .	523
III. Experimental Results . . . . .	529
IV. The Origin of the Pure Fermi Contact Contributions . . . . .	545
References . . . . .	549

## 14. Nuclei Other Than Protons

*B. R. McGarvey and R. J. Kurland*

I. Introduction—Scope and General Overview . . . . .	556
II. Distinctive Features of Heteronuclear NMR . . . . .	557
III. Survey of Experimental Results . . . . .	567
Appendix . . . . .	583
References . . . . .	590

## 15. NMR Studies of Organic Radicals

*Robert W. Kreilick*

I. Introduction . . . . .	595
II. Kinetics of Reactions Involving Diamagnetic and Paramagnetic Molecules . . . . .	597
III. Hyperfine Coupling Constants from NMR Spectra . . . . .	604

IV. NMR of Polyradicals . . . . .	619
V. Radical-Solvent Interactions . . . . .	624
References . . . . .	624

## 16. Some Notes Added in Proof

*Gerd N. La Mar, William DeW. Horrocks, Jr.,  
and R. H. Holm*

I. Introduction . . . . .	628
II. Analysis of Isotropic Shifts . . . . .	628
III. Stereochemistry . . . . .	630
IV. Intramolecular Rearrangements . . . . .	632
V. Biological Applications . . . . .	633
VI. Shift Reagents and Analytical Applications . . . . .	635
VII. Deuterium NMR . . . . .	638
References . . . . .	640

AUTHOR INDEX . . . . .	643
SUBJECT INDEX . . . . .	667
