

Contents in Brief

	List of Contributors	xix
	Preface	xxiii
	Acknowledgments	xxv
Chapter I	Introduction and Text Overview	1
PART A	Overviews of Biological Inorganic Chemistry	5
Chapter II	Bioinorganic Chemistry and the Biogeochemical Cycles	7
Chapter III	Metal Ions and Proteins: Binding, Stability, and Folding	31
Chapter IV	Special Cofactors and Metal Clusters	43
Chapter V	Transport and Storage of Metal Ions in Biology	57
Chapter VI	Biominerals and Biomineralization	79
Chapter VII	Metals in Medicine	95
PART B	Metal Ion Containing Biological Systems	137
Chapter VIII	Metal Ion Transport and Storage	139
Chapter IX	Hydrolytic Chemistry	175
Chapter X	Electron Transfer, Respiration, and Photosynthesis	229
Chapter XI	Oxygen Metabolism	319
Chapter XII	Hydrogen, Carbon, and Sulfur Metabolism	443
Chapter XIII	Metalloenzymes with Radical Intermediates	557
Chapter XIV	Metal Ion Receptors and Signaling	613
	Cell Biology, Biochemistry, and Evolution: Tutorial I	657
	Fundamentals of Coordination Chemistry: Tutorial II	695

Appendix I	Abbreviations	713
Appendix II	Glossary	717
Appendix III	The Literature of Biological Inorganic Chemistry	727
Appendix IV	Introduction to the Protein Data Bank (PDB)	729
	Index	731

Contents

	List of Contributors	xix
	Preface	xxiii
	Acknowledgments	xxv
Chapter I	Introduction and Text Overview	1
	<i>Ivano Bertini, Harry B. Gray, Edward I. Stiefel, and Joan Selverstone Valentine</i>	
	1.1. The Elements of Life	1
	1.2. Functional Roles of Biological Inorganic Elements	1
	1.3. A Guide to This Text	3
PART A	Overviews of Biological Inorganic Chemistry	5
Chapter II	Bioinorganic Chemistry and the Biogeochemical Cycles	7
	<i>Edward I. Stiefel</i>	
	II.1. Introduction	7
	II.2. The Origin and Abundance of the Chemical Elements	8
	II.3. The Carbon/Oxygen/Hydrogen Cycles	12
	II.4. The Nitrogen Cycle	16
	II.5. The Sulfur Cycle	20
	II.6. The Interaction and Integration of the Cycles	24
	II.7. Conclusions	29
Chapter III	Metal Ions and Proteins: Binding, Stability, and Folding	31
	<i>Ivano Bertini and Paola Turano</i>	
	III.1. Introduction	31
	III.2. The Metal Cofactor	31
	III.3. Protein Residues as Ligands for Metal Ions	33
	III.4. Genome Browsing	37
	III.5. Folding and Stability of Metalloproteins	37
	III.6. Kinetic Control of Metal Ion Delivery	40

Chapter IV	Special Cofactors and Metal Clusters	43
	<i>Lucia Banci, Ivano Bertini, Claudio Luchinat, and Paola Turano</i>	
	IV.1. Why Special Metal Cofactors?	43
	IV.2. Types of Cofactors, Structural Features, and Occurrence	46
	IV.3. Cofactor Biosynthesis	54
Chapter V	Transport and Storage of Metal Ions in Biology	57
	<i>Thomas J. Lyons and David J. Eide</i>	
	V.1. Introduction	57
	V.2. Metal Ion Bioavailability	59
	V.3. General Properties of Transport Systems	61
	V.4. Iron Illustrates the Problems of Metal Ion Transport	66
	V.5. Transport of Metal Ions Other Than Iron	70
	V.6. Mechanisms of Metal Ion Storage and Resistance	71
	V.7. Intracellular Metal Ion Transport and Trafficking	74
	V.8. Summary	76
Chapter VI	Biominerals and Biomineralization	79
	<i>Stephen Mann</i>	
	VI.1. Introduction	79
	VI.2. Biominerals: Types and Functions	79
	VI.3. General Principles of Biomineralization	83
	VI.4. Conclusions	93
Chapter VII	Metals in Medicine	95
	<i>Peter J. Sadler, Christopher Muncie, and Michelle A. Shipman</i>	
	VII.1. Introduction	95
	VII.2. Metallotherapeutics	96
	VII.3. Imaging and Diagnosis	114
	VII.4. Molecular Targets	122
	VII.5. Metal Metabolism as a Therapeutic Target	129
	VII.6. Conclusions	132
PART B	Metal Ion Containing Biological Systems	137
Chapter VIII	Metal Ion Transport and Storage	139
	VIII.1. Transferrin	139
	<i>Philip Aisen</i>	
	VIII.1.1. Introduction: Iron Metabolism and the Aqueous Chemistry of Iron	139
	VIII.1.2. Transferrin: The Iron Transporting Protein of Complex Organisms	140
	VIII.1.3. Iron-Donating Function of Transferrin	141
	VIII.1.4. Interaction of Transferrin with HFE	143
	VIII.2. Ferritin	144
	<i>Elizabeth C. Theil</i>	
	VIII.2.1. Introduction: The Need for Ferritins	144
	VIII.2.2. Ferritin: Nature's Nanoreactor for Iron and Oxygen	145

VIII.3.	Siderophores	151
	<i>Alison Butler</i>	
VIII.3.1.	Introduction: The Need for Siderophores	151
VIII.3.2.	Siderophore Structures	151
VIII.3.3.	Thermodynamics of Ferric Ion Coordination by Siderophores	152
VIII.3.4.	Outer-Membrane Receptor Proteins for Ferric Siderophores	153
VIII.3.5.	Marine Siderophores	154
VIII.4.	Metallothioneins	156
	<i>Hans-Juergen Hartmann and Ulrich Weser</i>	
VIII.4.1.	Introduction	157
VIII.4.2.	Classes of Metallothioneins	157
VIII.4.3.	Induction and Isolation	157
VIII.4.4.	Structural and Spectroscopic Properties	158
VIII.4.5.	Reactivity and Function	161
VIII.5.	Copper-Transporting ATPases	163
	<i>Bibudhendra Sarkar</i>	
VIII.5.1.	Introduction: Wilson and Menkes Diseases	163
VIII.5.2.	Structure and Function	163
VIII.5.3.	Metal Ion Binding and Conformational Changes	165
VIII.6.	Metallochaperones	166
	<i>Thomas V. O'Halloran and Valeria Culotta</i>	
VIII.6.1.	Introduction	166
VIII.6.2.	The Need for Metallochaperones	167
VIII.6.3.	COX17	169
VIII.6.4.	ATX1	169
VIII.6.5.	Copper Chaperone for SOD1	171
VIII.6.6.	Metallochaperones for Other Metals?	172
VIII.6.7.	Concluding Remarks	173
Chapter IX	Hydrolytic Chemistry	175
IX.1.	Metal-Dependent Lyase and Hydrolase Enzymes. (I) General Metabolism	175
	<i>J. A. Cowan</i>	
IX.1.1.	Introduction	175
IX.1.2.	Magnesium	176
IX.1.3.	Zinc	179
IX.1.4.	Manganese	183
IX.2.	Metal-Dependent Lyase and Hydrolase Enzymes. (II) Nucleic Acid Biochemistry	185
	<i>J. A. Cowan</i>	
IX.2.1.	Introduction	185
IX.2.2.	Magnesium-Dependent Enzymes	185
IX.2.3.	Calcium	192
IX.2.4.	Zinc	194

Chapter IV	IX.3. Urease	198
	<i>Lucia Banci, Stefano Ciurli, Claudio Luchinat, and Paola Turano</i>	
	IX.3.1. Introduction	198
	IX.3.2. The Structure of Native Urease	199
	IX.3.3. The Structure of Urease Complexed with Transition State and Substrate Analogues	200
	IX.3.4. The Structure-Based Mechanism	202
Chapter V	IX.3.5. The Structure of Urease Complexed with Competitive Inhibitors	204
	IX.3.6. The Molecular Basis for <i>in vivo</i> Urease Activation and Nickel Trafficking	206
	IX.4. Aconitase	209
	<i>M. Claire Kennedy and Helmut Beinert</i>	
	IX.4.1. Introduction	209
	IX.4.2. Stereochemistry of the Citrate– Isocitrate Isomerase Reaction	210
Chapter VI	IX.4.3. Characterization and Function of the Fe–S Cluster	211
	IX.4.4. Active Site Amino Acid Residues and the Reaction Mechanism	212
	IX.4.5. Cluster Reactivity and Cellular Function	214
	IX.5. Catalytic Nucleic Acids	215
	<i>Yi Lu</i>	
Chapter VII	IX.5.1. Introduction and Discovery of Catalytic Nucleic Acids	215
	IX.5.2. Scope and Efficiency of Catalytic Nucleic Acids	216
	IX.5.3. Classification of Catalytic Nucleic Acids with Hydrolytic Activity	217
	IX.5.4. Metal Ions as Important Cofactors in Catalytic Nucleic Acids	219
	IX.5.5. Interactions between Metal Ions and Catalytic Nucleic Acids	221
	IX.5.6. The Role of Metal Ions in Catalytic Nucleic Acids	222
	IX.5.7. Expanding the Repertoire of Catalytic Nucleic Acids with Transition Metal Ions	225
Chapter VIII	IX.5.8. Application of Catalytic Nucleic Acids	225
	IX.5.9. From Metalloproteins to Metallocatalytic Nucleic Acids	226
Chapter X	Electron Transfer, Respiration, and Photosynthesis	229
	X.1. Electron-Transfer Proteins	229
	<i>Lucia Banci, Ivano Bertini, Claudio Luchinat, and Paola Turano</i>	
	X.1.1. Introduction	229
	X.1.2. Determinants of Reduction Potentials	230
	X.1.3. Iron–Sulfur Proteins	239
	X.1.4. Cytochromes	245
	X.1.5. Copper Proteins	250
	X.1.6. A Further Comment on the Size of the Cofactor	254
	X.1.7. Donor–Acceptor Interactions	255

	X.2. Electron Transfer through Proteins	261
	<i>Harry B. Gray and Jay R. Winkler</i>	
	X.2.1. Introduction	261
	X.2.2. Basic Concepts	261
	X.2.3. Semiclassical Theory of Electron Transfer	264
	X.3. Photosynthesis and Respiration	278
	<i>Shelagh Ferguson-Miller,</i>	
	<i>Gerald T. Babcock, and Charles Yocum</i>	
	X.3.1. Introduction	278
	X.3.2. Qualitative Aspects of Mitchell's Chemiosmotic Hypothesis for Phosphorylation	279
	X.3.3. An Interlude: Reduction Potentials	279
	X.3.4. Maximizing Free Energy and ATP Production	281
	X.3.5. Quantitative Aspects of Mitchell's Chemiosmotic Hypothesis for Phosphorylation	283
	X.3.6. Cellular Structures Involved in the Energy Transduction Process: Similarities among Bacteria, Mitochondria, and Chloroplasts	284
	X.3.7. The Respiratory Chain	285
	X.3.8. The Photosynthetic Electron-Transfer Chain	291
	X.3.9. A Common Underlying Theme in Biological O_2/H_2O Metabolism: Metalloradical Active Sites	299
	X.4. Dioxygen Production: Photosystem II	302
	<i>Charles Yocum and Gerald T. Babcock</i>	
	X.4.1. Introduction	302
	X.4.2. Photosystem II Activity: Light-Catalyzed Two- and Four-Electron Redox Chemistry	303
	X.4.3. Photosystem II Protein Structure and Redox Cofactors	305
	X.4.4. Inorganic Ions of PSII	308
	X.4.5. Modeling the Structure of the PSII Mn Cluster	313
	X.4.6. Proposals for the Mechanism of Photosynthetic Water Oxidation	314
Chapter XI	Oxygen Metabolism (co-edited by Lawrence Que, Jr.)	319
	XI.1. Dioxygen Reactivity and Toxicity	319
	<i>Joan Selverstone Valentine</i>	
	XI.1.1. Introduction	319
	XI.1.2. Chemistry of Dioxygen	320
	XI.1.3. Dioxygen Toxicity	325
	XI.2. Superoxide Dismutases and Reductases	331
	<i>Joan Selverstone Valentine</i>	
	XI.2.1. Introduction	331
	XI.2.2. Superoxide Chemistry	332
	XI.2.3. Superoxide Dismutase and Superoxide Reductase Mechanistic Principles	333
	XI.2.4. Superoxide Dismutase and Superoxide Reductase Enzymes	335

XI.3.	Peroxidase and Catalases	343
	<i>Thomas L. Poulos</i>	
XI.3.1.	Introduction	343
XI.3.2.	Overall Structure	344
XI.3.3.	Active-Site Structure	345
XI.3.4.	Mechanism	346
XI.3.5.	Reduction of Compounds I and II	350
XI.4.	Dioxygen Carriers	354
	<i>Geoffrey B. Jameson and James A. Ibers</i>	
XI.4.1.	Introduction: Biological Dioxygen Transport Systems	354
XI.4.2.	Thermodynamic and Kinetic Aspects of Dioxygen Transport	357
XI.4.3.	Cooperativity and Dioxygen Transport	358
XI.4.4.	Biological Dioxygen Carriers	361
XI.4.5.	Protein Control of the Chemistry of Dioxygen, Iron, Copper, and Cobalt	370
XI.4.6.	Structural Basis of Ligand Affinities of Dioxygen Carriers	377
XI.4.7.	Final Remarks	385
XI.5.	Dioxygen Activating Enzymes	388
	<i>Lawrence Que, Jr.</i>	
XI.5.1.	Introduction: Converting Carriers into Activators	388
XI.5.2.	Mononuclear Nonheme Metal Centers That Activate Dioxygen	400
XI.6.	Reducing Dioxygen to Water: Cytochrome <i>c</i> Oxidase	413
	<i>Shinya Yoshikawa</i>	
XI.6.1.	Introduction	414
XI.6.2.	Lessons from the X-Ray Structures of Bovine Heart Cytochrome <i>c</i> Oxidase	415
XI.6.3.	Reaction Mechanism	419
XI.7.	Reducing Dioxygen to Water: Multi-Copper Oxidases	427
	<i>Peter F. Lindley</i>	
XI.7.1.	Introduction	427
XI.7.2.	Occurrence and General Properties	427
XI.7.3.	Functions	428
XI.7.4.	X-Ray Structures	429
XI.7.5.	Structure–Function Relationships	435
XI.7.6.	Perspectives	437
XI.8.	Reducing Dioxygen to Water: Mechanistic Considerations	440
	<i>Lawrence Que, Jr.</i>	

Chapter XII	Hydrogen, Carbon, and Sulfur Metabolism	443
	XII.1. Hydrogen Metabolism and Hydrogenase <i>Michael J. Maroney</i>	443
	XII.1.1. Introduction: Microbiology and Biochemistry of Hydrogen	443
	XII.1.2. Hydrogenase Structures	444
	XII.1.3. Biosynthesis	447
	XII.1.4. Hydrogenase Reaction Mechanism	447
	XII.1.5. Regulation by Hydrogen	450
	XII.2. Metalloenzymes in the Reduction of One-Carbon Compounds <i>Stephen W. Ragsdale</i>	452
	XII.2.1. Introduction: Metalloenzymes in the Reduction of One-Carbon Compounds to Methane and Acetic Acid	452
	XII.2.2. Electron Donors and Acceptors for One-Carbon Redox Reactions	455
	XII.2.3. Conversion to the "Formate" Oxidation Level by Two-Electron Reduction of Carbon Dioxide	455
	XII.2.4. Conversion from the "Formate" through the "Formaldehyde" to the "Methanol" Oxidation Level	458
	XII.2.5. Interconversions at the Methyl Level: Methyltransferases	459
	XII.2.6. Methyl Group Reduction or Carbonylation	461
	XII.2.7. Summary	464
	XII.3. Biological Nitrogen Fixation and Nitrification <i>William E. Newton</i>	468
	XII.3.1. Introduction	468
	XII.3.2. Biological Nitrogen Fixation: When and How Did Biological Nitrogen Fixation Evolve?	469
	XII.3.3. Nitrogen-Fixing Organisms and Crop Plants	470
	XII.3.4. Relationships among Nitrogenases	471
	XII.3.5. Structures of the Mo-Nitrogenase Component Proteins and Their Complex	474
	XII.3.6. Mechanism of Nitrogenase Action	480
	XII.3.7. Future Perspectives for Nitrogen Fixation	485
	XII.3.8. Biological Nitrification: What Is Nitrification?	485
	XII.3.9. Enzymes Involved in Nitrification by Autotrophic Organisms	485
	XII.3.10. Nitrification by Heterotrophic Organisms	490
	XII.3.11. Anaerobic Ammonia Oxidation (Anammox)	491
	XII.3.12. Future Perspectives for Nitrification	491
	XII.4. Nitrogen Metabolism: Denitrification <i>Bruce A. Averill</i>	494
	XII.4.1. Introduction	494
	XII.4.2. The Enzymes of Denitrification	494
	XII.4.3. Summary	505

	XII.5.	Sulfur Metabolism	508
		<i>Antônio V. Xavier and Jean LeGall</i>	
	XII.5.1.	Introduction	508
	XII.5.2.	Biological Role of Sulfur Compounds	509
	XII.5.3.	Biological Sulfur Cycle	510
	XII.6.	Molybdenum Enzymes	518
		<i>Jonathan McMaster, C. David Garner, and Edward I. Stiefel</i>	
	XII.6.1.	Introduction	518
	XII.6.2.	The Active Sites of the Molybdenum Enzymes	521
	XII.6.3.	Molybdenum Enzymes	530
	XII.6.4.	Conclusions	542
	XII.7.	Tungsten Enzymes	545
		<i>Roopali Roy and Michael W. W. Adams</i>	
	XII.7.1.	Introduction	545
	XII.7.2.	Biochemical Properties of Tungstoenzymes	546
	XII.7.3.	Structural Properties of Tungstoenzymes	550
	XII.7.4.	Spectroscopic Properties of Tungstoenzymes	552
	XII.7.5.	Mechanism of Action of Tungstoenzymes	553
	XII.7.6.	Tungsten Model Complexes	554
	XII.7.7.	Tungsten versus Molybdenum	555
Chapter XIII		Metalloenzymes with Radical Intermediates	557
	XIII.1.	Introduction to Free Radicals	557
		<i>James W. Whittaker</i>	
	XIII.1.1.	Introduction	557
	XIII.1.2.	Free Radical Stability and Reactivity	559
	XIII.1.3.	Electron Paramagnetic Resonance Spectroscopy	560
	XIII.1.4.	Biological Radical Complexes	560
	XIII.2.	Cobalamins	562
		<i>JoAnne Stubbe</i>	
	XIII.2.1.	Introduction	562
	XIII.2.2.	Nomenclature and Chemistry	562
	XIII.2.3.	Enzyme Systems Using AdoCbl	565
	XIII.2.4.	Unresolved Issues in AdoCbl Requiring Enzymes	569
	XIII.2.5.	MeCbl Using Methionine Synthase as a Case Study	570
	XIII.2.6.	Unresolved Issues in Methyl Transfer Reactions with MeCbl	572
	XIII.3.	Ribonucleotide Reductases	575
		<i>Marc Fontecave</i>	
	XIII.3.1.	Introduction: Three Classes of Ribonucleotide Reductases	575
	XIII.3.2.	Mechanisms of Radical Formation	577
	XIII.3.3.	Conclusions	580

XIII.4.	Fe–S Clusters in Radical Generation	582
	<i>Joan B. Broderick</i>	
XIII.4.1.	Introduction	582
XIII.4.2.	Glycyl Radical Generation	586
XIII.4.3.	Isomerization Reactions	589
XIII.4.4.	Cofactor Biosynthesis	590
XIII.4.5.	DNA Repair	592
XIII.4.6.	Radical-SAM Enzymes: Unifying Themes	593
XIII.5.	Galactose Oxidase	595
	<i>James A. Whittaker</i>	
XIII.5.1.	Introduction	595
XIII.5.2.	Active Site Structure	596
XIII.5.3.	Oxidation–Reduction Chemistry	597
XIII.5.4.	Catalytic Turnover Mechanism	598
XIII.5.5.	Mechanism of Cofactor Biogenesis	600
XIII.6.	Amine Oxidases	601
	<i>David M. Dooley</i>	
XIII.6.1.	Introduction	601
XIII.6.2.	Structural Characterization	602
XIII.6.3.	Structure–Function Relationship	604
XIII.6.4.	Mechanistic Considerations	604
XIII.6.5.	Biogenesis of Amine Oxidases	606
XIII.6.6.	Conclusion	606
XIII.7.	Lipoxygenase	607
	<i>Judith Klinman and Keith Rickert</i>	
XIII.7.1.	Introduction	607
XIII.7.2.	Structure	608
XIII.7.3.	Mechanism	608
XIII.7.4.	Kinetics	611
Chapter XIV	Metal Ion Receptors and Signaling	613
XIV.1.	Metalloregulatory Proteins	613
	<i>Dennis R. Winge</i>	
XIV.1.1.	Introduction: Structural Metal Sites	613
XIV.1.2.	Structural Zn Domains	614
XIV.1.3.	Metal Ion Signaling	618
XIV.1.4.	Metalloregulatory Proteins	620
XIV.1.5.	Metalloregulation of Transcription	620
XIV.1.6.	Metalloregulation of Post-Transcriptional Processes	625
XIV.1.7.	Post-Translational Metalloregulation	626
XIV.2.	Structural Zinc-Binding Domains	628
	<i>John S. Magyar and Paola Turano</i>	
XIV.2.1.	Introduction	628
XIV.2.2.	Molecular and Macromolecular Interactions	628
XIV.2.3.	Metal Coordination and Substitution	630
XIV.2.4.	Zinc Fingers and Protein Design	632

XIV.3.	Calcium in Mammalian Cells <i>Torbjörn Drakenberg, Bryan Finn, and Sture Forsén</i>	635
XIV.3.1.	Introduction	635
XIV.3.2.	Concentration Levels of Ca^{2+} in Higher Organisms	635
XIV.3.3.	The Intracellular Ca^{2+} -Signaling System	636
XIV.3.4.	A Widespread Ca^{2+} -Binding Motif: The EF-Hand	639
XIV.3.5.	Ca^{2+} Induced Structural Changes in Modulator Proteins (Calmodulin, Troponin C)	641
XIV.3.6.	Ca^{2+} Binding in Buffer or Transporter Proteins	645
XIV.4.	Nitric Oxide <i>Thomas L. Poulos</i>	647
XIV.4.1.	Introduction: Physiological Role and Chemistry of Nitric Oxide	647
XIV.4.2.	Chemistry of Oxygen Activation	649
XIV.4.3.	Overview of Nitric Oxide Synthase Architecture	650
XIV.4.4.	Nitric Oxide Synthase Mechanism	651
Cell Biology, Biochemistry, and Evolution: Tutorial I <i>Edith B. Gralla and Aram Nersissian</i>		657
T.I.1.	Life's Diversity	657
T.I.2.	Evolutionary History	666
T.I.3.	Genomes and Proteomes	668
T.I.4.	Cellular Components	670
T.I.5.	Metabolism	685
Fundamentals of Coordination Chemistry: Tutorial II <i>James A. Roe, Bryan F. Shaw, and Joan Selverstone Valentine</i>		695
T.II.1.	Introduction	695
T.II.2.	Complexation Equilibria in Water	695
T.II.3.	The Effect of Metal Ions on the $\text{p}K_{\text{a}}$ of Ligands	698
T.II.4.	Ligand Specificity: Hard versus Soft	698
T.II.5.	Coordination Chemistry and Ligand-Field Theory	700
T.II.6.	Consequences of Ligand-Field Theory	703
T.II.7.	Kinetic Aspects of Metal Ion Binding	708
T.II.8.	Redox Potentials and Electron-Transfer Reactions	709
Appendix I	Abbreviations	713
Appendix II	Glossary	717
Appendix III	The Literature of Biological Inorganic Chemistry	727
Appendix IV	Introduction to the Protein Data Bank (PDB)	729
	Index	731
