<b>1 Introduction and Overview</b>	<b>1</b>
<i>Rationale of the study 1—Objectives of the study 2—Methods and data sources 4—Land degradation defined 7—The community, its composition and origins 9—The Qala en Nahal refugee settlement scheme 11—Environment, insecurity and involuntary migration 18—Environmental impacts of refugees 21—Demographic consequences of environmental change 26—Population-based theory of agricultural change 29—Notes 33</i>	
<b>2 Overcultivation and Land Degradation on the Qala en Nahal Scheme</b>	<b>34</b>
<i>The extent of soil erosion on the scheme 37—Effects of continuous cultivation on the physical and chemical properties of vertisol soils on the scheme 41—Methodology 42—Discussion of results 43—Changes in soil texture 44—Changes in soil structure 45—Changes in soil fertility 46—Conclusion 48—Notes 48</i>	
<b>3 Change in Vegetation Resources On and Around the Qala en Nahal Refugee Settlement Scheme</b>	<b>50</b>
<i>Assessment of vegetation change on the scheme 51—The methodology of the vegetation survey 53—Vegetation species distribution 54—Vegetation cover 60—Plant density 61—Forage value 62—Distribution of grasses and forbs 62—Grass cover 65—Density of grasses and forbs 67—Biomass of grasses and forbs 68—Discussion of the findings 69—Distribution of tree species 69—Distribution of grasses and forbs 71—Conclusion 73—Notes 74</i>	
<b>4 Decline in Crop Yields</b>	<b>75</b>
<i>Causes of crop-yield decline 77—Soil exhaustion 80—Weed infestation 82—Climatic fluctuation 85—Insect-pest infestation 92—Flooding and waterlogging 93—Conclusion 93—Notes 94</i>	

## 5 The Impact of Wood-fuel Use on Environmental Degradation

95

*Consumption of wood fuel and construction materials on the scheme 98—Timber consumption for house construction 99—Firewood and charcoal consumption in the refugee and Sudanese villages 103—Activities for which wood fuel is used on the scheme 108—The impact of the use of wood fuel and construction materials on deforestation 108—Changes between 1982 and 1992 and consequences of biomass depletion 111—Conclusion 121—Notes 122*

## 6 Overstocking and the Problem of Overgrazing of Range Resources

124

*Livestock population on the scheme 127—Livestock management 130—Types of livestock 137—Causes of decline of range resources 139—Impact of water resources on livestock production 146—Range-resource usership rights 147—Why the livestock build-up? 148—Flexibility and insurance against crop failure 148—Lack of tenurial security 150—Asset transferability 150—Labour-saving strategy 150—Increased supply of veterinary services 151—Conclusion 152—Notes 153*

## 7 Institutions and Resource-management Systems in Eritrea, the Refugees' Country of Origin

154

*Socio-economic backgrounds of the refugees on the scheme 156—Scarcity, tenurial security and development of resource-regulating institutions: the example of the plateau 159—Periodic redistribution and sustainability of land use 164—Resource abundance, tenurial insecurity and development of resource-management systems: the example of the Beni Amer in the western lowlands 169—Coping strategies to counter land degradation 177—Diversification of crops 181—Manuring 182—Terracing and water harvesting 182—Short fallow periods 183—Seasonal and permanent migration 183—Conclusion 186—Notes 188*

## 8 Institutions, Social Stability and Depletion of Common Resources on the Scheme

189

*Tenurial security and conservation 189—Indigenous farming knowledge and conservation 193—Farm size and conservation 195—Governance of the common resources on the scheme 196—Impact of refugee status, lack of social stability and uncertainty on resource use 204—Breakdown of traditional authority and its consequence for resource management 207—Conclusion 213—Notes 214*

## 9 Ecological Perception and Conservation

215

*Ecological perception of the farmers 216—Farmer participation in tree planting 221—Why the sluggish response? 224—Lack of tree tenure and future rights of exploitation 224—The dream of returning home and long-term investment 226—Fear of relocation to a new site 227—Tree planting conflicts with animal production 227—Competition for family labour time 228—Improper choice of seedlings and budgetary constraints 229—Conclusion 230—Notes 230*

## 10 Population Pressure and Resource Depletion 231

*Population growth on the scheme 1970–1991 233—Population pressure on scheme resources 236—Non-demographic factors as causes of resource depletion 240—Allocation of inadequate land 240—Inequitable distribution of resources 242—Policy of confinement 243—Commercialization of agriculture and other economic activities 246—Breakdown of traditional resource-management regimes 247—Poverty 248—Conclusion 252—Notes 253*

## 11 The Farmers' Response to Land Degradation 255

*Bringing new land into the production process 256—Extension of cultivation on to marginal areas 257—Sharecropping 257—Land renting 258—Difference in coping strategies 258—Measures against land degradation 258—Short fallow 259—Crop rotation 261—Previous indigenous knowledge and the present practice of natural-resource conservation 264—Conclusion 268—Notes 268*

## 12 Environmental Degradation and Predisposition to Change 269

*Openness to a new cultivation technology – tractors 271—Production for the market 275—Non-farm income-generating activities 276—Labour-market participation 278—Trading activities 280—Firewood and thatch-grass collection 280—Charcoal production 281—Water sale 281—Shepherding 282—Sale of crop residues 282—Conclusion 283—Notes 283*

## 13 Farmers' Responses to ACORD's Natural-resource Programmes 284

*Promotion of hand cultivation and local capacity building 288—From capacity building to dependence 289—Advantages of manual cultivation 291—Subsistence security and inappropriate land-use practice 293—ACORD's natural-resource programme 295—Diffusion of the results of the adaptive research programme 295—Point of departure 297—Four-crop rotation 298—Weed-control trials 300—Response to the Striga-resistant SRN39 sorghum seed variety 300—Response to improved sesame seed 301—Varied responses to sorghum and sesame improved seed varieties 301—Response to four-course rotation 303—An exceptional farmer 303—EEC project: a tool for dissemination of agricultural innovation 305—Response to legume crops in the EEC project 308—Response to jab-planter cultivation in the EEC project 308—'Freedom' without choice 311—Conclusion 312—Notes 313*

## 14 Concluding Remarks 314

*Notes 322*
