CONTENTS

Series Editor's Introduction v

Author's Introduction to the Second Edition vii

1. Linear Regression and the Logistic Regression Model 1

1.1 Regression Assumptions 4
1.2 Nonlinear Relationships and Variable Transformations 11
1.3 Probabilities, Odds, Odds Ratios, and the Logit Transformation for Dichotomous Dependent Variables 12
1.4 Logistic Regression: A First Look 14

2. Summary Statistics for Evaluating the Logistic Regression Model 17

2.1 R^2, F, and Sums of Squared Errors 18
2.2 Goodness of Fit: G_M, R^2_L, and the Log Likelihood 20
2.3 Predictive Efficiency: λ_p, τ_p, ϕ_p, and the Binomial Test 27
2.4 Examples: Assessing the Adequacy of Logistic Regression Models 36
2.5 Conclusion: Summary Measures for Evaluating the Logistic Regression Model 41

3. Interpreting the Logistic Regression Coefficients 41

3.1 Statistical Significance in Logistic Regression Analysis 43
3.2 Interpreting Unstandardized Logistic Regression Coefficients 48
3.3 Substantive Significance and Standardized Coefficients 51
3.4 Exponentiated Coefficients or Odds Ratios 56
3.5 More on Categorical Predictors: Contrasts and Interpretation 57
3.6 Interaction Effects 61
3.7 Stepwise Logistic Regression 63

4. An Introduction to Logistic Regression Diagnostics **67**

4.1 Specification Error 67
4.2 Collinearity 75
4.3 Numerical Problems: Zero Cells and Complete Separation 78
4.4 Analysis of Residuals 80
4.5 Overdispersion and Underdispersion 89
4.6 A Suggested Protocol for Logistic Regression Diagnostics 90

5. Polytomous Logistic Regression and Alternatives to Logistic Regression **91**

5.1 Polytomous Nominal Dependent Variables 94
5.2 Polytomous or Multinomial Ordinal Dependent Variables 97
5.3 Conclusion 101

Notes **103**

Appendix: Probabilities **107**
