Contents

Preface ix

Introduction 1

CHAPTER 1 ***Selection on One Locus*** 5

Fitness 6

Fitness and Population Growth 7

Two Alleles with Viability Selection 9

Frequency-Independent Selection 11

Frequency-Dependent Selection 13

Continuous Time 14

Introducing Mutation 17

Mutational Load 20

The Evolution of Outcrossing 20

Multiple Alleles 23

Fertility Selection 27

Regression Interpretation 31

Additive Genetic Variance 33

Fitness Maximization, Optimization, and Potential Functions 36

CHAPTER 2 ***Selection on Two Loci 39***

No Selection 41
Gametic Disequilibrium 42
Introducing Selection 44
Evolution of Gametic Disequilibrium 47
Quasi-Gametic Equilibrium 50
Epistasis 51
Nomenclature of Epistasis 54
Additive Genetic Variance 55
Applications of Two-Locus Theory 59
Sexual Selection 59
Cultural Transmission 66
Meiotic Drive 69

CHAPTER 3 ***Drift at Neutral Loci 73***

Reproduction as Sampling 73
Drift as a Markov Process 74
Evolution as a Random Walk 76
Drift as Random Covariance 78
The Coalescent Process 80
Time to Coalescence 82
Drift and Neutral Variation 84
Gene Trees and Species Trees 85
Coalescence of Multiple Alleles 86
Distribution of Pairwise Allelic Differences 90
The Structured Coalescent 93
Finite Island Model with Symmetric Migration 97
Asymmetric Migration 99
Conservative Migration 101
Proportional Migration 102
Balancing Selection at a Linked Locus 102
The Coalescent versus Inbreeding Coefficients 104

CHAPTER 4 ***Effective Population Size 109***

Inbreeding Effective Population Size (N_e^i) 111
Fluctuating Population Size 111
Breeding Sex Ratio 113
Variation in Family Size 114
Subdivided Population 117
Variance Effective Population Size (N_e^v) 119
Separate Sexes 125
Ecology of Effective Population Size 127

CHAPTER 5 ***Diffusion Theory: Combining Evolutionary Mechanisms 129***

The Structure of Diffusion Theory 130
Assumptions of the Diffusion Approximation 132
The Kolmogorov Forward Equation 133
Geometry of Diffusion 135
The Equilibrium Distribution 139
Mutation and Drift 141
Selection and Drift 143
Heterozygote Advantage 143
Heterozygote Intermediate 144
Mutation, Selection, and Drift 146
Migration between Populations 147
Migration Maintaining Variation 148
Migration Opposing Selection 150
Probability of Fixation with Selection 151
The Kolmogorov Backward Equation 152
The Equilibrium Distribution 153
Probability of Fixation 154
Fixation of Deleterious Alleles 160

CHAPTER 6 ***The Algebra of Evolution: Price's Theorem 165***

Price's Theorem 166
Concepts Underlying Price's Theorem 169
A Note on Regressions and Covariances 170
Generalized Marginal Fitness 171
The Selection Differential 173
Directional and Stabilizing Selection 176
Relationship between Parents and Offspring 178
Breeder's Equation 180
Fisher's Fundamental Theorem 181
Generalized Drift 181
Putting It All Together 187

CHAPTER 7 ***Quantitative Genetics 189***

A Preliminary Warning about Terminology 190
Multivariate Normality 191
Selection on One Trait: The Breeder's Equation 192
Multivariate Evolution 194
Path Analysis 194
Sexual Selection 199
Parent–Offspring Covariance versus Additive Genetic Variance 203
Measuring Selection: The Multivariate Selection Differential 205
Maintenance of Genetic Variation 209
Diallelic Loci Model 210
Continuum of Alleles Model 214

CHAPTER 8 ***Developmental Evolution 219***

Phenotype Landscapes 220
Tensor Analysis 224
Moments 227
Selection on a Single Phenotypic Trait 228
The Meaning of Q Vectors 230
The General Equation 232

Selection on Higher Moments 237
Multiple Characters 240
Adaptive Phenotypic Plasticity 241
Evolution of the Reaction Norm Slope 244
Evolution of the Reaction Norm Curvature 248
Covariance between Traits 251
Uncurved Landscapes 253
Curved Landscapes 254
Parent–Offspring Covariance 256
Entangled Traits 260

CHAPTER 9 ***Evolutionary Game Theory and Strategy Dynamics 263***

An Early Example: Sex Ratio Evolution 263
Origins of Game Theory 265
A Two-Strategy Game 266
Mixed versus Pure Strategies 269
General Rules for Discrete Games 270
Nash Equilibrium 270
Evolutionarily Stable Strategy (ESS) 270
Game Geometry 273
Asymmetric Games 275
Cooperation and the Prisoner's Dilemma 277
Repeated Prisoner's Dilemma Game 278
Continuous Games and Adaptive Dynamics 282
Assumptions of Game Theory 288
Drift in Strategy Evolution 291

CHAPTER 10 ***Multilevel Selection 297***

Kin Selection 298
Two Levels with the Same Generation Time 302
A General Version of Hamilton's Inequality 304
Inclusive Fitness 307
Groups Persisting for a Few Individual Generations 308
Sex Ratio Evolution 308

Levels with Very Different Generation Times 312
Nonoverlapping Group Generations 314
Interactions between the Two Levels of Selection 319
Groups with Overlapping Generations 320
Properties Influencing the Efficacy of Multilevel Selection 321
Identifying the Units of Selection 323

Appendix A 327
Variances, Covariances, and Regressions 327
Path Analysis 330

Appendix B 333
Distributions and Moments 333
Binomial Distribution 333
Poisson Distribution 335
Normal Distribution 336
Moments 337
Moment Generating Functions 338

Appendix C 341
Calculus 341
Taylor Series 342
Differential Equations 343
Separable Equations 344
First Order Linear Equations 345

Appendix D 347
Vectors, Matrices, and Tensors 347
Tensors 351
Coordinate Systems 351
The Geometric Meaning of Inner Products 354

Bibliography 355

Index 365
