Preface.....	xix
Acknowledgments.....	xxi
About the Authors.....	xxiii
Chapter 1 Introduction to Toxicology: The Necessity of Measurement.....	1
Introduction.....	1
The Beginnings of Toxicological Measurement.....	4
Safety as a Concept.....	4
Strong Toxicants and Weak Toxicants.....	6
The Necessity for Toxicological Assessment.....	8
Toxicology and Toxicity Defined.....	9
It Is Natural, so It Must Be Safe—Everyday Toxicological Conundrums.....	11
Natural Medicines and Poisons.....	13
Natural versus Synthetic.....	14
General Objectives of Toxicological Study.....	16
Biology and Outcome of Toxic Reactions.....	18
Cellular Basis and Consequences of Toxic Change.....	20
Expression of Toxicity.....	24
Age.....	24
Genetics.....	24
Pregnancy.....	25
Diet.....	25
Occupation.....	25
Disease.....	26
Lifestyle.....	26
Target Organ Expression of Toxicity.....	26
Blood Supply.....	28
Oxidative Exposure.....	28
Cell Turnover.....	28
Repair Ability and Reversibility.....	28
Physiology.....	29
Morphology.....	29
Processing Ability.....	29
Hormonal Control.....	30
Accumulation.....	30
Protection Mechanisms.....	30
Ethics of Toxicological Assessment.....	31
The Three Rs: Reduce, Refine, and Replace.....	34
Summary.....	36
References.....	36

Chapter 2	Normality: Definition and Maintenance	37
	Introduction	37
	What Is Normality?	38
	Normality as a Range	41
	Experimental Normality	41
	Husbandry	43
	Environment	44
	Other Sources of Stress	44
	Other Sources of Experimental Variation	45
	Protocol Design and Procedure as Sources of Abnormality	45
	Control Groups as Normality	46
	Establishing and Maintaining Normality in Experimental Groups	48
	Baseline Data and Historical Controls	50
	Uses for Historical Control Data	51
	Types of Historical Control Data	51
	Defining a Normal Range	52
	Drift in Historical Control Ranges	52
	How Many Data Points?	53
	Transferability of Normality—Data from Other Laboratories	55
	Criteria for Comparison of Historical Controls	56
	Summary	58
	References	58
Chapter 3	Determination of Toxicity: The Basic Principles	61
	Introduction	61
	Circumstances of Toxicity Testing	61
	Effects Sought in Toxicity Studies	62
	Basic Principles of Toxicological Investigation	63
	Objectives	63
	Test Substance Considerations	64
	Carrying System and Route of Administration	65
	Choice of Test System	68
	Study Design Basics and Confounding Factors	70
	Choice of Dose Levels or Test Concentrations	73
	Duration of Treatment	74
	Demonstration of Test System Exposure—Toxicokinetics	76
	Toxicokinetic Design	77
	Regulatory Framework and Influences	78
	Legislation, Guidelines, and Animal Use	79
	Legislative Influences on the Conduct of Testing	80
	Regulatory Conservatism—The Way Forward	80
	Public Perceptions	80

Regulation of Study Conduct—Good Laboratory Practice	81
The Basic Elements of GLP	82
Facility Management	82
Quality Assurance	83
Standard Operating Procedures	83
Facilities and Equipment	84
The Study Director and Study Personnel	84
The Study Plan or Protocol	85
Test Item and Test System	85
Raw Data	86
The Study Report.....	86
Other Aspects of GLP	87
Summary	87
References	87
Chapter 4 Determination of Toxicity: <i>In Vitro</i> and Alternatives	89
Introduction	89
Rationale for <i>In Vitro</i> Toxicology.....	92
How and When to Use <i>In Vitro</i> or Alternative Techniques	94
Considerations in Screening Program Design	95
Areas of Use of <i>In Vitro</i> Toxicology	95
Considerations in the Development of <i>In Vitro</i> Tests.....	96
Validation of <i>In Vitro</i> Methods	98
Test Systems and Endpoints	100
Target Organ Toxicity.....	103
Liver.....	104
Kidney	105
Nervous System	106
Immune System.....	106
Other Organs	107
Integrated Systems in Development	107
Functional Toxicity Testing.....	108
Pharmacology and Safety Pharmacology <i>In Vitro</i>	108
Metabolism.....	109
Kinetics	109
Toxicity Testing	110
Carcinogenicity	110
Reproductive Toxicity	111
Sensitization	111
Irritation and Corrosion.....	112
Phototoxicity.....	112
Ecotoxicology.....	112
Pitfalls in <i>In Vitro</i> Toxicology	113
Omics	113
Future Utility	116

	Summary	117
	References	117
Chapter 5	Toxicology <i>In Silico</i>	119
	Introduction	119
	(Q)SAR Methodologies	120
	Model Validity	123
	Regulations, QSARs, and Experts	124
	Choosing a (Q)SAR.....	128
	Endpoints.....	129
	Commercial versus Noncommercial	130
	Pitfalls in <i>In Silico</i> Toxicology	131
	Summary	132
	References	132
Chapter 6	Safety Pharmacology	133
	Introduction	133
	General Principles	134
	Tests to Be Conducted.....	134
	What to Test?.....	135
	Design.....	137
	Test Systems for Safety Pharmacology	138
	Safety Pharmacology in Toxicity Studies	138
	Tests and Their Conduct.....	140
	Central Nervous System—Modified Irwin Screen	140
	Cardiovascular System	140
	The hERG Inhibition Assay.....	142
	<i>In Vivo</i> Cardiovascular Studies.....	143
	Other Tests	144
	Respiratory System.....	144
	GI Tract.....	145
	Renal Function.....	146
	Pitfalls of Safety Pharmacology Studies	146
	Summary	147
	References	147
Chapter 7	Determination: General and Reproductive Toxicology	149
	General Toxicology	149
	Test Systems for General Toxicology	149
	Study Designs in General Toxicology	152
	Dose Selection in General Toxicology	152
	Study Duration	154

Parameters Measured in General Toxicology	155
Assessment of Exposure	155
In-Life Observations	155
Clinical Pathology	156
Postmortem Examinations	158
Additional Examinations	160
Reversibility or Recovery Studies	161
Examinations for Specific Toxicities	162
Immunotoxicity	162
Neurotoxicity	163
Respiratory Toxicology	165
Dermal Toxicity	166
Pitfalls in General Toxicology	167
Reproductive and Developmental Toxicology	169
General Principles in Reproductive and Developmental Toxicology	169
Juvenile Toxicity Studies	171
Test Systems for Reproductive Toxicology	172
Reproductive Toxicity <i>In Vitro</i>	173
Study Designs for Reproductive Toxicology	175
Basic Design and Dose Selection	176
Mating	178
Group Sizes	178
Parameters Measured in Reproductive Toxicology	178
Fertility	179
Embryonic Development	180
Perinatal and Postnatal Development—Multigeneration Studies	180
Pitfalls in Reproductive Toxicology	181
Summary	182
References	183
Chapter 8 Determination: Genotoxicity and Carcinogenicity	185
Genotoxicity	185
General Principles in Genotoxicity	185
Test Battery and Study Design	187
Test Systems and Tests	190
<i>In Vitro</i> Systems: Bacterial Cultures	191
<i>In Vitro</i> Systems: Mammalian Cells in Culture	192
<i>Ex Vivo</i> Systems	194
<i>In Vivo</i> Systems	194
<i>In Silico</i> Systems	196
Pitfalls in Genotoxicity	197
Genotoxicity Testing <i>In Vitro</i> —Sensitivity and Specificity	199

	Carcinogenicity	202
	General Principles in Carcinogenicity	202
	Test Systems for Carcinogenicity	203
	Study Design and Methods of Assessment.....	205
	Choice of Dose Levels	206
	Parameters Measured	206
	Other Systems for Carcinogenicity Assessment.....	208
	Pitfalls in Carcinogenicity Studies	213
	Overview of the Future of Carcinogenicity Assessment.....	215
	Summary	222
	References	222
Chapter 9	Determination: Dermal Toxicity—Sensitization, Irritation, and Corrosion	225
	Introduction	225
	General Principles of Dermal Toxicology.....	225
	Factors in Dermal Toxicity.....	227
	Test Systems	229
	Study Design and Parameters Measured.....	230
	Dermal Irritation and Corrosion.....	230
	Ocular Irritation.....	232
	Irritation by Other Routes	232
	Sensitization	232
	Allergic Sensitization in Guinea Pigs.....	233
	Allergic Sensitization in Mice (Local Lymph Node Assay)	234
	Pitfalls in Irritation and Sensitization	235
	Summary	236
	References	236
Chapter 10	Determination: Environmental Toxicology and Ecotoxicology.....	239
	Introduction	239
	Relevance of Environmental Assessment to Chemical Development.....	240
	General Principles of Environmental Toxicology and Ecotoxicology	241
	Pollution, Routes of Entry, and Environmental Absorption, Distribution, Metabolism, and Elimination	241
	Factors in Testing for Environmental Effect.....	244
	Test Systems and Study Types for Ecotoxicology.....	246
	Ecotoxicology <i>In Vitro</i>	246
	Invertebrates	247
	Vertebrates.....	248
	Mesocosms and Field Tests and Studies.....	248
	Environmental Assessment of Agrochemicals	250

Environmental Assessment of Pharmaceuticals	251
Pitfalls in Environmental Toxicology	252
Summary	253
References	254
Chapter 11 Interpretation: Basic Principles	255
Introduction	255
The Interpretation Challenge.....	255
The Scope of Interpretation.....	256
Interpretation as a Dynamic Process.....	256
Steps in Interpretation	257
Study Design.....	257
Controls and Expectation	258
Use of Background Data in Interpretation	259
Statistics and Significance in Toxicology.....	260
Statistical Process.....	263
Data Treatment and Transformation.....	266
Assessing Exposure.....	266
Integration of Exposure Information.....	267
Toxicokinetics.....	270
The Reality of Difference—The Interpretation of Small Differences	272
The Reproducibility of Difference	274
Summary	274
References	275
Chapter 12 Interpretation: Different Data Types	277
Individual Data Sets	277
Safety Pharmacology	278
General Toxicology	279
Toxicokinetics.....	282
Clinical Pathology	283
Hematology.....	284
Clinical Chemistry and Urinalysis	284
Morphological Pathology	286
The Cell	287
Subcellular Organelles	287
Composition of the Cytoplasm or Cell Contents.....	288
Plasma Membrane Changes	288
Hypertrophy and Atrophy	289
Hyperplasia and Metaplasia	289
Changes to Whole Tissues or Organs.....	289
Inflammation	290
Changes in Blood Supply	290

	Repair and Reversibility	291
	Neoplasia	292
	Overview of Interpretation in General Toxicology	293
	Reproductive Toxicology	293
	Genotoxicity	295
	Carcinogenicity	298
	Environmental Toxicology and Ecotoxicology	301
	Epidemiology and Occupational Toxicology	304
	Epidemiology	304
	Occupational Toxicology	307
	Summary	312
	References	312
Chapter 13	Prediction of Hazard	315
	Introduction	315
	Hazard, Risk, and Human-Relevant Hazard	316
	Circumstances of Hazard Prediction	317
	Principles of Prediction	318
	Steps in the Prediction Process	320
	Basic Preliminary Questions	320
	Databases for Prediction—Quality and Composition	321
	Data Handling	323
	Factors for Consideration in Prediction	324
	Prediction from Minimal Databases	328
	Prediction for Individuals	329
	Summary	331
	References	332
Chapter 14	Background to Risk due to Toxicity	333
	Introduction	333
	Overview of Risk Analysis	333
	Levels of Risk and Factors That Affect Risk	336
	Risk Perception	339
	Acceptability and Tolerability of Risk	341
	Comparative Risk	343
	Synthetic versus Natural	346
	Risk Expression and Quantification	348
	Summary	349
	References	349
Chapter 15	Risk Assessment in Practice and Setting Exposure Limits	351
	Introduction	351
	Risk Assessment as a Process	352

Data Quality	352
Data Selection for Risk Assessment.....	353
Single Effect versus General Risk Assessment.....	356
Tools and Models in Risk Assessment.....	357
PBPK Models and Scaling	357
Models for Rodent Bioassay Data	360
Target Population, Dose, and Exposure	361
Prediction of Exposure	362
Measurement of Exposure.....	364
Process and Factors in Risk Assessment.....	365
Physical Form and Formulation	365
Route of Exposure	367
Bioavailability.....	368
Dose Response.....	368
Safety Evaluation and Human Data	369
Purpose and Target Population.....	371
Setting Safety Factors and Margins	372
Hazard Weighting and Safety Factors.....	372
Safety Factor Rationale	374
Exposure Limits	374
Dose Level Selection for Starting Risk Assessment	378
NOEL and NOAEL	378
The Benchmark Dose.....	380
Setting Exposure Limits.....	382
Use of the Therapeutic Dose for Setting WELs/OELs for Pharmaceuticals	382
Thresholds of Toxicological Concern	384
Summary	386
References	387
Chapter 16 Safety Assessment of Extractables, Leachables, and Impurities	389
Introduction	389
Definitions	389
Regulatory Background.....	390
Toxicological Assessment	391
Risk Assessment.....	392
Impurities in Practice	394
Summary	397
References	397
Chapter 17 Risk Assessment and Management in the Workplace.....	399
Introduction	399
Classification and Exposure Limits.....	401
Factors in Workplace Risk Assessment.....	402

	Workplace Risk Assessment	402
	Workplace Exposure Assessment.....	403
	Risk Management in the Workplace	405
	Compound Categories for Containment.....	405
	The Process of Risk Management in the Workplace	407
	Monitoring for Exposure or Effect.....	408
	Summary	411
	References	411
Chapter 18	Risk Assessment: Carcinogenicity, the Environment, Evolution, and Overview of Risk Assessment.....	413
	Introduction	413
	Risk Assessment and Carcinogenicity	414
	DNA Vulnerability, Genotype, and Phenotype.....	415
	Epidemiology and Background Incidence.....	416
	Data Used in Carcinogenicity Risk Assessments for Novel Chemicals	418
	Thresholds in Carcinogenicity and Genotoxicity.....	418
	Low-Dose Extrapolation.....	423
	Overview of Carcinogenicity Risk Assessment	423
	Risk Assessment and the Environment.....	425
	Factors in Environmental Risk Assessment.....	427
	International Management of Environmental Risks	429
	The Evolution of Risk Assessment.....	431
	Summary	432
	References	432
Chapter 19	Evaluation of Specific Classes of Chemical.....	435
	Introduction	435
	Regulatory Influences.....	436
	The Basic Toxicity Test Package.....	438
	Human Pharmaceuticals.....	438
	Veterinary Pharmaceuticals	444
	Medical Devices.....	445
	Agrochemicals/Plant Protection Products	449
	Biocides	451
	Cosmetics	453
	General and Industrial Chemicals—REACH.....	455
	Tobacco Products	460
	Summary	462
	References	463

Chapter 20	Errors in Toxicology.....	465
	Introduction	465
	Errors through the Ages	466
	A Brief History of Early Regulations.....	467
	Modern Mistakes and Mismanagement	468
	Clinical Trials with New Medicinal Products.....	471
	Contamination	471
	Misunderstanding.....	474
	Correlation, Causation, and Statistics.....	474
	The Public and Toxicology.....	477
	Toxicology and the Internet.....	477
	Summary	479
	References	480
Chapter 21	The Future of Toxicity Testing and Risk Assessment.....	483
	Introduction	483
	Challenges for Toxicology.....	484
	Evolution of Toxicity Testing	485
	Development of New Test Methods and Models.....	486
	The Future of Toxicity Testing.....	488
	The Tools Available and Their Problems	488
	Toxicology <i>In Silico</i>	489
	<i>In Vitro</i> Systems	489
	<i>In Vivo</i> : Animals in Toxicity Testing.....	490
	A New Paradigm for Safety Evaluation	492
	What Will the Future of Testing Look Like?.....	494
	Challenges for Risk Assessment and Management.....	495
	Evolution of Risk Assessment	495
	Summary	497
	References	498
Glossary	501
Index	507
