Preface xv

## PART I

---

---

### INTRODUCTION

1. **General Scheme of Protein Biosynthesis** 3
  - Further reading 6
  
2. **Messenger RNA and the Genetic Code** 7
  - 2-1 Discovery of mRNA 7
  - 2-2 Deciphering the code 9
  - 2-3 Some features of the code dictionary 14
  - 2-4 Structure of mRNA 15
    - Primary structure* 15 / *Functional regions* 18 /
    - Folding* 21
    - References 27
    - Further reading 30
  
3. **Transfer RNA and Aminoacyl-tRNA Synthetases** 32
  - 3-1 Discovery 32
  - 3-2 Structure of tRNA 34
    - Primary structure* 34 / *Secondary structure* 39 /
    - Tertiary structure* 44

3-3	Aminoacyl-tRNA synthetases	48
3-4	Aminoacylation of tRNA	51
3-5	Specificity of tRNA aminoacylation	55
	<i>Specificity for amino acids</i>	55 /
	<i>Specificity for tRNA</i>	56
	References	58
	Further reading	60

#### 4. Ribosomes and Translation 62

4-1	First observations	62
4-2	Localization of ribosomes in the cell	64
4-3	Prokaryotic and eukaryotic ribosomes	64
4-4	Sequential readout of mRNA by ribosomes: Polyribosomes	68
4-5	Stages of translation: Initiation, elongation, and termination	70
4-6	Cell-free translation systems	71
	References	72
	Further reading	74

#### 5. Chemical Reactions and the Overall Energy Balance of Protein Biosynthesis 76

Appendix	78
Further reading	80

## PART II

---

### STRUCTURE OF THE RIBOSOME

#### 6. Morphology of the Ribosome 83

6-1	Size, appearance, and subdivision	83
6-2	Detailed shape of ribosomal subunits	85
	<i>Small subunit</i>	85 /
	<i>Large subunit</i>	87
6-3	Association of subunits into the complete ribosome	90
	References	91

#### 7. Ribosomal RNA 93

7-1	Significance of ribosomal RNA	93
-----	-------------------------------	----

7-2	Ribosomal RNA species	94
	<i>High-molecular-mass RNA of the small ribosomal subunit</i>	94 /
	<i>High-molecular-mass RNA of the large ribosomal subunit</i>	95 /
	<i>5S RNA of the large ribosomal subunit</i>	96
7-3	Primary and secondary structures	96
	16S (18S) RNA	96 /
	23S (28S) RNA	103 /
	5S RNA	106
7-4	Structural domains and compact folding of RNA molecules	111
	16S (18S) RNA	111 /
	23S (28S) RNA	114
	References	116
	Further reading	121

## 8. Ribosomal Proteins

123

8-1	Diversity: Nomenclature	123
8-2	Primary structures	126
8-3	Three-dimensional structures	129
8-4	Protein complexes	132
8-5	Interactions with ribosomal RNA	134
	References	138
	Further reading	140

## 9. Mutual Arrangement of Ribosomal RNA and Proteins (Quaternary Structure)

142

9-1	Peripheral localization of proteins on the RNA core	142
9-2	Topography of proteins	145
	<i>Identification of neighboring proteins</i>	145 /
	<i>Measuring distances between proteins</i>	147 /
	<i>Immuno-electron microscopy</i>	148
9-3	Topography of RNA	153
	<i>Immuno-electron microscopy</i>	153 /
	<i>Assignment to protein topography</i>	154
9-4	Quaternary structure	157
	References	158
	Further reading	160

<b>10. Structural Transformations of Ribosomes (<i>in vitro</i>)</b>	<b>162</b>
10-1 Dissociation of ribosomes into subunits	162
10-2 Unfolding of subunits	167
10-3 Disassembly and reassembly of subunits	173
<i>Disassembly</i>	173 / <i>Reassembly</i> 177
References	181

## PART III

---

### FUNCTIONING OF THE RIBOSOME

<b>11. Functional Activities and Functional Sites of the Ribosome</b>	<b>187</b>
11-1 Working cycle of the ribosome	187
11-2 Binding functions	189
<i>Binding and retention of the template polynucleotide (mRNA-binding site)</i>	189 / <i>Retention of peptidyl-tRNA or deacylated tRNA (tRNA-binding P-site)</i> 194 / <i>Binding of aminoacyl-tRNA (tRNA-binding A-site)</i> 197 / <i>Binding of translation factors and GTP (factor-binding site)</i> 200
11-3 Catalytic functions	204
<i>GTPase</i>	204 / <i>Peptidyl transferase</i> 204
11-4 Function of ligand displacement (translocation)	209
References	210
Further reading	214
<b>12. Elongation I: Aminoacyl-tRNA Binding with the Ribosome</b>	<b>216</b>
12-1 Codon-anticodon interaction	216
<i>Adaptor hypothesis and its proof</i>	216 / <i>The concept of anticodon</i> 217 / <i>Wobble hypothesis</i> 218 / <i>Corrections to wobbling rules</i> 222 / <i>Stereochemistry of codon-anticodon pairing</i> 223

12-2	Participation of the elongation factor (EF-T <sub>u</sub> or EF-1) in aminoacyl-tRNA binding	225
	<i>EF-T<sub>u</sub> and its interactions</i>	225 /
	<i>Binding the ternary complex with the ribosome</i>	228 /
	<i>Role of GTP hydrolysis</i>	228
12-3	"Nonenzymatic" (factor-free) binding of aminoacyl-tRNA	230
12-4	Inhibitors	231
12-5	Miscoding	234
	<i>Misreading of poly(U)</i>	234 /
	<i>Principal types of mispairing</i>	236 /
	<i>Factors contributing to miscoding</i>	236 /
	<i>Miscoding level in vivo under normal conditions</i>	238 /
	<i>Kinetic mechanisms of miscoding and miscoding correction</i>	241
12-6	Sequence of events and molecular mechanisms	244
	<i>Scanning of tRNA species</i>	244 /
	<i>Recognition of anticodon</i>	246 /
	<i>GTP hydrolysis</i>	247 /
	<i>Correction of aminoacyl-tRNA selection</i>	247 /
	<i>Locking of aminoacyl-tRNA in the A-site</i>	248 /
	<i>General scheme</i>	248
	References	250
	Further reading	256
<b>13.</b>	<b>Elongation II: Transpeptidation (Peptide Bond Formation)</b>	<b>258</b>
13-1	Chemistry of the reaction	258
13-2	Energy balance of the reaction	262
13-3	Inhibitors	263
13-4	Stereochemistry	266
	References	271
<b>14.</b>	<b>Elongation III: Translocation</b>	<b>274</b>
14-1	Definition and experimental tests	274
14-2	Participation of the elongation factor (EF-G or EF-2)	276

14-3	Role of EF-G-mediated GTP hydrolysis	279
14-4	Sequence of events in EF-G-catalyzed translocation: Inhibitors	280
14-5	"Nonenzymatic" (factor-free) translocation	283
14-6	Movement of the template during translocation	285
14-7	Energetics of translocation	286
14-8	Molecular mechanisms of translocation	288
14-9	Summary: The material and energy balance of the elongation cycle	289
	References	290
	Further reading	293
<b>15.</b>	<b>Elongation IV: Rate Modulation</b>	<b>295</b>
15-1	Discontinuities in elongation	295
15-2	Selective regulation of elongation rate on different mRNAs	297
15-3	Total regulation of elongation rate	298
	<i>Slowing-down of elongation upon virus infections</i>	298
	<i>Total repression of elongation by bacterial and plant toxins</i>	299
	<i>Regulation of the elongation rate through endogeneous modifications of elongation factors</i>	304
	References	305
<b>16.</b>	<b>Initiation of Translation and Its Regulation in Procaryotes</b>	<b>308</b>
16-1	Significance of initiation	308
16-2	Initiation codons, initiator tRNA, and protein initiation factors	309
16-3	State of ribosomes before initiation	312
16-4	Association of the ribosome with the template polynucleotide	312
16-5	Sequence of events during initiation	313
16-6	Initiation in the absence of some initiation components	319
16-7	Regulation of initiation: Control of protein synthesis at the translational level	321

<i>Regulation of translation of MS2 phage RNA</i>	322	/	<i>Regulation of the synthesis of ribosomal proteins</i>	325
References	332			
Further reading	338			

**17. Initiation of Translation and Its Regulation in Eucaryotes** **339**

17-1	Characteristics of eucaryotic mRNA	339
17-2	Initiation codon, initiator tRNA, and protein initiation factors	341
17-3	State of ribosomes before initiation	346
17-4	Formation of the complex between the 40S ribosomal subunit and the initiator tRNA	346
17-5	Association of the ribosomal 40S subunit with mRNA	347
17-6	Recognition of the initiation codon	350
17-7	Formation of the initiation ribosomal 80S complex	352
17-8	Regulation of initiation	353
	<i>Selective discrimination of mRNA</i>	355 /
	<i>Repression of initiation</i>	357
	References	361
	Further reading	367

**18. Termination of translation** **369**

18-1	Termination codons	369
18-2	Termination protein factors	371
18-3	Ribosomal site for binding termination factors	372
18-4	Hydrolysis of peptidyl-tRNA	373
18-5	Sequence of events during termination	374
	References	376

**19. Cotranslational Folding, Compartmentalization, and Modifications of Proteins** **378**

19-1	Contribution of ribosomes to protein folding	378
19-2	Interaction of the ribosome and the nascent peptide with the membrane: Cotranslational transmembrane transport	381

*Synthesis of proteins by free and membrane-bound polyribosomes* 381 / *Interaction between the ribosome and the membrane* 382 / *N-terminal signal sequence of the nascent polypeptide* 385 / *Signal recognition particles and their membrane receptors* 391

19-3 Cotranslational modifications of proteins 394

References 398

Further reading 403
