Contents

1 Thinking in Systems 1
1.1 Global Warming 1
1.2 What Is a System? 3
1.3 Examples of Systems in Real Life 4
1.3.1 A Home Heating System 4
1.3.2 A Bus Transportation System 5
1.3.3 A System of Predators and Prey 6
1.3.4 Controlling the Thickness of Rolled Steel 6
1.4 Similarities Between Disparate Systems 9
1.5 Open and Closed Loop Thinking 10
1.6 System View 11
1.7 System Types 13
1.7.1 Engineered Systems 14
1.7.2 Natural Systems 14
1.7.3 Social, Political, Economic, and Other Types of Systems 15
1.8 Information Is Fundamental to Systems' Behavior 15
1.9 The Importance of System View 16
1.10 The Way Forward 18

2 Engineered Systems 19
2.1 History of Engineered Systems 20
2.2 The Watt Governor 21
2.3 Depiction of Information Flow (Control Loop Diagram) 22

2.4 Going Round a Loop 24
2.4.1 Objective or Set Point 24
2.4.2 Controller 25
2.4.3 Actuator 28
2.4.4 Process 29
2.4.5 Process Output and Sensor 29
2.4.6 Feedback 30
2.5 Right Feedback to the Right Person at the Right Time 31
2.5.1 Improving Chemical Production 32
2.5.2 Conclusions 34
2.6 Process Characteristics 34
2.6.1 Instantaneous Response 34
2.6.2 Delayed Response 34
2.6.3 Lag 36
2.6.4 Simple and Cascaded Control Loops 38
2.7 System Interactions and Hierarchies 39
2.8 Simple Feedback Control: Strengths and Limitations 40
2.9 Engineered Systems Since the Days of James Watt 41

3 Political, Social, and Biological Systems 45
3.1 Jay W. Forrester and the History of System Dynamics 45
3.1.1 System Dynamics 46
3.1.2 Urban Dynamics 47
3.1.3 World Dynamics 47
3.1.4 System Dynamics as a Part of Children's Education 47
3.2 Causal Loop Diagram 48
3.3 Feedback 52
3.3.1 Biofeedback 53
3.3.2 Dopamine Treatment for Parkinson's Disease 53
3.3.3 Know Thyself 54
3.4 Dead Time and Lag 56
3.5 System Hierarchy 56
3.6 The System Dynamics of Youth Violence: A Case Study 58
3.6.1 Overall Project Design 58
3.6.2 The Development of Causal Loop Diagrams 59
3.6.3 A Comprehensive Loop Diagram for Youth Violence 61
3.7 The Advantages and Limitations of Causal Loop Diagrams 63
3.8 Systems Are Everywhere 64

4 The Fundamental Behavior Patterns 67
4.1 The Steady State Behavior 67
4.2 Nonlinearity and Time Variance 69
4.2.1 Linear and Nonlinear Behaviors 69
4.2.2 Time Invariant and Variant Behaviors 70
4.3 Dynamic Behavior Patterns 71
4.3.1 Growth and Decay 72
4.3.2 Sally's Bank Account 74
4.3.3 Rapid Escalation of Arguments Between a Courting Couple 74
4.3.4 The Chernobyl Disaster 76
4.3.5 China's Economic Growth 78
4.4 Oscillation and Instability 80
4.4.1 A Firsthand Experience of System Oscillation 82
4.5 Goal Seeking 83
4.6 Detail Complexity Versus Dynamic Complexity 86
4.7 The Puzzling Behaviors of Systems 87

5 Modeling and Simulation 89
5.1 What Is a Model? 89
5.2 Mental Models 91
5.3 Conceptual Models 92
5.4 An Interactive Model Is Worth a Thousand Pictures 94
5.4.1 Simulation of a First-Order Lag 96
5.4.2 Simulation of an Auto Dealership's Inventory and Sales 98
5.5 An Interactive Model for Youth Violence 99
5.5.1 Simulation of Youth Violence 100
5.5.2 Project Benefits 101
5.6 Black Box or Empirical Models 103
5.6.1 Artificial Neural Network 103
5.7 Models for Simulation and Training 106
5.7.1 Training Astronauts 106
5.7.2 Training Industrial Plant Operators 107
5.7.3 Training in an Academic Environment 107
5.8 Importance of Interactive Modeling and Simulation 108

6 Optimization 111
6.1 What Is Optimization? 111
6.2 Optimizing Manpower for a Project 113

6.3 Objectives and Constraints 115
6.3.1 Constraint Analysis 116
6.3.2 The Case of Heidi 117
6.4 Biological Systems 118
6.5 Industrial Systems 119
6.5.1 Multivariable Control 120
6.5.2 A Fruit Juice Blending System 121
6.5.3 Model-Based Control 122
6.5.4 Hill Climbing 125
6.6 Kaizen: Optimization in Small Steps 126
6.6.1 Kaizen in Daily Life 127
6.6.2 Kaizen in Manufacturing 128
6.7 An Objective Way to Optimize a Decision-Making Process 129
6.7.1 Steps for an Objective Decision-Making Process 131
6.8 Optimization: Challenges and Opportunities 132

7 Distributed Intelligence 137
7.1 A Robust Chilled Water System 138
7.2 Need for a Decentralized Structure 139
7.3 Swarm Intelligence 141
7.4 Distributed Autonomous Systems 142
7.5 Development of Distributed Computation 143
7.5.1 From Monolithic Software to Subroutines, Objects, and Intelligent Agents 144
7.6 Intelligent Agent Advantage 149
7.7 Intelligent Agent Applications 150
7.7.1 Daimler's Manufacturing Line Control 150
7.7.2 Designing of a Smart Grid 151
7.7.3 Buying and Selling of Electric Power 152
7.8 Agent-Based Modeling and Simulation 153

8 Discrete Events and Procedures 155
8.1 Why Study Procedures? 155
8.2 Procedures in Engineered Systems 158
8.2.1 Formula Variables 160
8.3 Procedural Functions in Social Systems 160
8.3.1 Taking Care of Abnormal Conditions 161
8.4 Procedural Functions in Natural Systems 161
8.5 Main Characteristics of Procedural Functions 162

8.6 Importance of Discrete and Procedural Functions 164
8.7 Modeling and Simulation of Procedural Functions 165

9 Unintended Consequences 167
9.1 Unintended Negatives and Positives 167
9.1.1 Unintended Negatives 168
9.1.2 Unintended Benefits 169
9.2 Examples of Unintended Consequences 169
9.2.1 The Cobra Effect 169
9.2.2 Prohibition in the USA 170
9.2.3 War on Drugs 171
9.2.4 Mysterious Killer of India's Vultures 173
9.2.5 The Great Fire of London 174
9.2.6 Viagra Leads to Wild Life Conservation 174
9.2.7 Negative Consequences of Increased Sanitization and Sterilization 175
9.2.8 Aswan High Dam 177
9.2.9 Australian Iron Ore Mining Boom 179
9.3 Minimizing Unintended Consequences 181

10 The Seven Habits of a System Savvy Person 185
10.1 Create Right Mental and Conceptual Models 185
10.1.1 Set Perspective at the Right Level 186
10.1.2 Close Feedback Loops 186
10.1.3 Think Dynamically 187
10.1.4 Document the Models 187
10.2 Make Interactive Models That Are Realistic and Useful 188
10.2.1 Choose Right Modeling Technique 188
10.2.2 Recognize Nonlinearity and Time Variance 189
10.2.3 Recognize the Power and Limitations of a Model 190
10.3 Optimize the System 190
10.3.1 Minimize Delay and Dead Time 190
10.3.2 Address System Constraints 191
10.3.3 Focus on the Underlying Causes Rather Than on Symptoms 191
10.3.4 Remove Obstacles Rather Than Push Harder 192

10.4 Make Systems More Robust 192
10.4.1 Minimize Uncontrolled Oscillations and Escalations 193
10.4.2 Design Decentralized Systems 194
10.4.3 Promote Redundancy 194
10.5 Strive for Continuous Improvements 195
10.6 Reduce Unintended Consequences 196
10.7 Cultivate a Holistic World View 197

Epilogue: Role of System Science in the Twenty-First Century 199

Appendix I: The PID Controller 221

Appendix II: Guidelines for Drawing Causal-Loop Diagrams 227

Appendix III: Generic System Behaviors 231

Appendix IV: Model Building and Simulation Software 241

Appendix V: Simulation of Manpower Needs for a Project 245

Appendix VI: Agent-Based Modeling Software 249

Appendix VII: Simulation of Gender-Based Segregation Patterns 253

Appendix VIII: Documentation of Procedural Functions 259

Appendix IX: Example of a Simple Batch Process 267
