Contents

1 Motivating Examples and Other Preliminaries 1
1.1 Some Motivating Examples 1
1.2 Application: Polymerase Chain Reaction and Branching Processes . 3
1.2.1 Introduction About the Mechanics of PCR 3
1.2.2 Mathematical Model 4
1.2.3 Genealogical Approach 5
1.2.4 Statistical Estimation of the Mutation Rate 7
1.2.5 Mutagenic PCR and Artificial Evolution 7
1.3 The Branching Property 9
1.4 Probability Generating Functions and Analytical Methods 11
1.5 Classifications of the Branching Processes 13
1.5.1 Lifetime 13
1.5.2 Type Space 13
1.5.3 Criticality 13
1.6 Modeling with Branching Processes 15

2 Biological Background 19
2.1 Genomes: Changes in DNA and Chromosomes 19
2.1.1 Genome 19
2.1.2 DNA and Genes 19
2.1.3 Mutation 20
2.1.4 Noncoding Sequences of DNA 21
2.1.5 Repeated Sequences of DNA 21
2.1.6 Gene Amplification 22
2.1.7 Chromosomes 22
2.1.8 DNA Replication 23
2.1.9 Recombination 24
2.2 Cells: Cell Cycle Kinetics and Cell Division 25
2.2.1 Cells as the Basic Units of Life 25
2.2.2 Cell Growth, Division, and Death 26
2.2.3 Stem Cells 27
2.2.4 Cell Cycle Kinetics 28

2.3 Cancer 28
2.3.1 Cancer Cell Populations Are Immortal 28
2.3.2 Tumor Heterogeneity and Instability 29
2.3.3 Cell Cycle and Resistance to Chemotherapy 29
2.3.4 Mutations in Cancer Cells 30
2.3.5 Tumor Progression 30
2.4 Population Genetics and Evolution 31
2.4.1 Wright–Fisher Model and Coalescent-Based Models 31
2.4.2 Human Immunodeficiency Virus 31
2.5 References 32
2.5.1 Textbooks and Monographs in Biology 32
2.5.2 Mathematical Biology 34
2.5.3 Arguments for Mathematical Modeling Biological Phenomena, with Examples 36

3 The Galton–Watson Process 37
3.1 Construction, Functional Equation, and Elementary Properties 37
3.1.1 Backward Equation 38
3.1.2 Forward Equation 39
3.1.3 Moments 40
3.1.4 The Linear-Fractional Case 40
3.2 Application: Cell Cycle Model with Death and Quiescence 41
3.2.1 The Mathematical Model 41
3.2.2 Modeling Biological Data 42
3.3 Extinction and Criticality 45
3.4 Application: Complexity Threshold in the Evolution of Early Life . . 46
3.5 Asymptotic Properties 47
3.5.1 Supercritical Process 47
3.5.2 Subcritical Process 49
3.5.3 Critical Process 50
3.6 Application: Cancer Mutations 51
3.6.1 Modeling Driver and Passenger Mutations 51
3.6.2 Distribution of Mutational Events in Various Phases of Tumor Growth 52
3.7 Application: Gene Amplification 53
3.7.1 Gene Amplification and Drug Resistance 54
3.7.2 Galton–Watson Process Model of Gene Amplification and Deamplification 54
3.7.3 Mathematical Model of the Loss of Resistance 56
3.7.4 Probabilities of Gene Amplification and Deamplification from MTX Data 57
3.8 Application: Iterated Galton–Watson Process and Expansion of DNA Repeats 58
3.8.1 Dynamics of DNA Repeats in Human Pedigrees 58
3.8.2 Definition of the Process 59

3.8.3 Example . . . 61
3.8.4 Properties . . . 61
3.9 Application: Galton–Watson Processes in Random Environment and Macroevolution . . . 64
3.9.1 Reduced Trees for Subcritical GWBPRE . . . 64
3.9.2 Evolutionary Interpretation . . . 65
3.10 Other Works and Applications . . . 66
3.10.1 Stochastic Dependence . . . 66
3.10.2 Process State Dependence . . . 66
3.10.3 Bisexual Galton–Watson Process . . . 67
3.10.4 Age of the Process . . . 67
3.10.5 Family Trees and Subtrees . . . 68
3.10.6 Model of Next Generation Sequencing . . . 68
3.11 Problems . . . 69

4 The Age-Dependent Process: Markov Case . . . 71
4.1 Differential Equation for the pgf and its Elementary Properties . . . 71
4.1.1 Definition of the Process . . . 71
4.1.2 Probability of Extinction and Moments . . . 73
4.2 Application: Clonal Resistance Theory of Cancer Cells . . . 74
4.2.1 Single-Mutation Case . . . 75
4.2.2 Two-Mutations Case . . . 79
4.3 Other Works and Applications . . . 83
4.3.1 Fluctuation Analysis . . . 83
4.4 Problems . . . 84

5 The Bellman–Harris Process . . . 87
5.1 Integral Equations for the pgf and Basic Properties . . . 87
5.1.1 Heuristic Derivations . . . 87
5.2 Renewal Theory and Asymptotics of the Moments . . . 88
5.2.1 Basics of the Renewal Theory . . . 89
5.2.2 The Moments . . . 90
5.3 Asymptotic Properties of the Process in the Supercritical Case . . . 91
5.4 Application: Analysis of the Stathmokinetic Experiment . . . 92
5.4.1 Age Distributions . . . 92
5.4.2 The Stathmokinetic Experiment . . . 92
5.4.3 Model . . . 94
5.4.4 Estimation . . . 96
5.5 Other Works and Applications . . . 97
5.5.1 Cell Populations . . . 97
5.5.2 Cell Proliferation . . . 99
5.5.3 Estimation of Cell Lifetimes . . . 101
5.5.4 Bifurcating Autoregression . . . 103
5.5.5 Branching Processes and Cancer Therapy . . . 103
5.6 Problems . . . 104

6 Multitype Processes 107
6.1 Application: Mutations and Fluctuation Analysis 107
6.1.1 Luria–Delbrück Model 108
6.1.2 The Markov Branching Process Model 110
6.1.3 The Galton–Watson Process Model 111
6.1.4 The Galton–Watson Process Model with Cell Death 112
6.1.5 Two-Stage Galton–Watson Process Model 113
6.1.6 The Single-Stage Models Versus Data 115
6.1.7 The Two-Stage Model Versus Data 118
6.1.8 Modified Median Estimator of Mutation Rates 119
6.1.9 Modified Median Estimator Versus Data 123
6.1.10 Recent Developments in Theory and Application of Fluctuation Analysis 126
6.2 The Positive Regular Case of the Multitype Galton–Watson Process 129
6.2.1 Basics 129
6.2.2 Positivity Properties 131
6.2.3 Asymptotic Behavior in the Supercritical Case 131
6.2.4 Probability of Extinction 132
6.3 Application: A Model of Two-Cell Populations 132
6.4 Application: Stochastic Model of the Cell Cycle with Chemotherapy 133
6.4.1 Model of Drug-Perturbed Stathmokinesis 134
6.4.2 Model Parameters 138
6.4.3 Prediction of the Effects of Continuous Exposure to the Drug 139
6.4.4 Results 139
6.4.5 Discussion 142
6.5 Application: Cell Surface Aggregation Phenomena 142
6.5.1 Relationship Between the Galton–Watson Process and the Aggregation Process 143
6.5.2 Progeny Distributions 144
6.5.3 Antigen Size Distribution on a Cell Surface 144
6.6 Sampling Formulae for Multitype Galton–Watson Process 146
6.6.1 Formulae for Mean and Variance 147
6.6.2 The Markov Property 147
6.7 Application: Deletions in Mitochondrial DNA 148
6.8 Application: Polymerase Chain Reaction 150
6.9 Other Works and Applications 151
6.9.1 Hemopoiesis and Clonal Cell Populations 151
6.9.2 Gene Amplification 152
6.9.3 Modeling in Varying Environments 153
6.9.4 Model of Ovarian Cancer Progression and Metastasis 153
6.9.5 HIV Modeling 154

7 Branching Processes with Infinitely Many Types 155
7.1 Galton–Watson and Bellman–Harris Processes with Denumerably Many Types and Branching Random Walks 155
7.2 Generalized Linear-Fractional Distributions and Their Applications 157
7.2.1 Introduction 157
7.2.2 Definitions and Basic Properties 158
7.2.3 Applications in Branching Processes 160
7.3 Biological Models with Denumerable Infinity of Types 161
7.4 Application: A Model of Unstable Gene Amplification 162
7.5 Application: Stable Gene Amplification 165
7.5.1 Assumptions 166
7.5.2 Pgf's and Expectations 168
7.5.3 Model Versus Data 170
7.6 Application: Quasistationarity in a Branching Model of Division-Within-Division 171
7.6.1 Definition of the Process 172
7.6.2 Quasistationarity 174
7.6.3 Gene Amplification 175
7.7 Application: Mathematical Modeling of the Loss of Telomere Sequences 175
7.7.1 Stochastic Model 175
7.7.2 Branching Process 178
7.7.3 Analysis in the Markov Case 180
7.7.4 Model Versus Data 181
7.7.5 Further Work on Telomere Modeling 183
7.8 Application: Structured Cell Population Models 185
7.8.1 A Model of Unequal Division and Growth Regulation in Cell Colonies 186
7.8.2 Cell Cycle Model with Cell-Size Control, Unequal Division of Cells, and Two Cell Types 190
7.9 Application: Yule's Evolutionary Process 196
7.10 Application: Branching Process with Infinite-Allele Mutations 198
7.10.1 Proliferation of Alu Repeats 198

8 Genealogies of Branching Processes and Their Applications 207
8.1 Genealogies of Branching Processes 207
8.2 "Near-Critical" Processes 209
8.3 Application: Estimation of the Age of the Mitochondrial Eve 212
8.3.1 Population Genetic Model 212
8.3.2 Numerical Estimates 215
8.3.3 Robustness of Mitochondrial Eve 216

Appendix A Multivariate Probability Generating Functions 221

Appendix B Probability Distributions for the Bellman–Harris Process ... 223
B.1 Construction 223
B.1.1 The Families 223
B.1.2 The Number of Objects at Given Time 224
B.1.3 Probability Measure 224
B.1.4 The Embedded Galton–Watson Process and Extinction Probability 225
B.2 Integral Equation 226
B.2.1 Decomposition into Subfamilies 226
B.2.2 Generating Functions 226
B.2.3 Uniqueness of $F(s,t)$ and Finiteness of $Z(t)$ 227

Appendix C General Processes 229
C.1 Introduction to the Jagers-Crump-Mode Process 229
C.1.1 Definition of the General Branching Process 229
C.1.2 Random Characteristics and Basic Decomposition 230
C.1.3 Expectations, Malthusian Parameter and Exponential Growth 231
C.1.4 Abstract Type Spaces and Composition of the Process 233
C.2 Application: Alexandersson's Cell Population Model Using a General Branching Process 235
C.2.1 The Model 235
C.2.2 Existence of the Stable Birth Size Distribution 237
C.2.3 Asymptotics of the Cell Model 237

Glossary 239
Biological Glossary for Mathematicians 239
Mathematical Glossary for Biologists 245
