

CONTENTS

The institute and its scientific board	V
The staff and field of work	VI
1. INTRODUCTION	1
2. RESERVOIRS	7
2.1 Dissolved and dispersed substances in reservoir water (Slapy and Římov)	7
2.2 Phosphorus uptake by settling seston in the Římov reservoir	8
2.3 Sedimentation processes in the Jordán reservoir	9
2.4 Microbial characteristics of the Slapy and Římov reservoirs	11
2.5 Comparing the effects of resource enrichment and grazing on bacterioplankton communities and viral production in the Římov reservoir	12
2.6 The effect of flooding on bacteria and decomposition in the Římov and Slapy reservoirs	13
2.7 Seasonal development of phytoplankton in relation to the effect of flooding events in the Římov reservoir in 2002	13
2.8 Seasonal study on expression of extracellular phosphatases in the phytoplankton of the Římov reservoir	14
2.9 Rotifer relations to components of a microbial food web in the Římov reservoir	15
2.10 The clear water rotifer population declines in the reservoir	16
2.11 Comparison of zooplankton of the last three years in relation to the extremely intensive through flow in 2002 (Slapy reservoir)	16
2.12 Fish stock composition in the Římov reservoir in 2002	20
3. LAKES	21
3.1 Photochemical, chemical, and biological transformations of dissolved organic carbon and its impact on alkalinity production in acidified lakes	21
3.2 Physical, chemical, and biochemical characteristics of soils and bedrock in catchments of the Bohemian Forest lakes	21
3.3 Biogeochemical cycles of nutrients in mountain catchment-lake ecosystems: Anthropogenic impacts and possibilities of recovery	22
3.4 Pelagic food webs in lakes of European mountain districts	24
3.5 Long term pattern of picoplankton development in a deep monomictic saline lake in a semi-desert area	27
4. SPECIAL INVESTIGATIONS	29
4.1 Dissolved organic matter changes in water	29
4.2 Impact of enhanced protozoan grazing and different nutrient availability on bacterial community composition	30
