

POLARIZATION IN SPECTRAL LINES

E. LANDI DEGL'INNOCENTI AND M. LANDOLFI

The scientific research based on spectropolarimetric techniques is undergoing a phase of rapid growth. Instruments of unprecedented sensitivity are nowadays available, particularly for solar observations. To fully exploit the rich diagnostic content of such observations, it is necessary to understand the physical mechanisms involved in the generation and transfer of polarized radiation in astrophysical (or laboratory) plasmas.

After an introductory part based on classical physics, this book tackles the subject by a rigorous quantum-mechanical approach. The transfer equations for polarized radiation and the statistical equilibrium equations for the atomic density matrix are derived directly from the principles of Quantum Electrodynamics. The two sets of equations are then used to present a number of applications, mainly concerning the diagnostics of solar magnetic fields.

This book is primarily addressed to scientists working in the field of spectropolarimetry. It may also serve as a textbook for a course at the graduate or advanced undergraduate level.

CHAPTER 1. DESCRIPTION OF POLARIZED RADIATION	1
1.1. The Polarization Ellipse	1
1.2. Special Cases of the Polarization Ellipse	5
1.3. Polarization Tensor	5
1.4. Quasi-monochromatic Wave	8
1.5. Polarizers and Retarders	11
1.6. Stokes Parameters	15
1.7. Measurements of the Stokes Parameters	18
1.8. Stokes Parameters and Polarization Tensor	22
1.9. Properties of the Stokes Parameters	25
1.10. Photons and Stokes Parameters	27
CHAPTER 2. ANGULAR MOMENTUM AND RACAHA ALGEBRA	29
2.1. Eigenvalues and Eigenvectors of Angular Momentum	29
2.2. Coupling of Two Angular Momenta: Vector-Coupling Coefficients and 3- j Symbols	32
2.3. Coupling of Three Angular Momenta: Racah Coefficients and 6- j Symbols	39
2.4. Coupling of Four Angular Momenta: 9- j Symbols	45
2.5. Rotations and Euler Angles	49
2.6. Rotation Matrices	53
2.7. Irreducible Spherical Tensors	60
2.8. The Wigner-Eckart Theorem and its Consequences	65
2.9. Properties of Reduced Matrix Elements	68
CHAPTER 3. ATOMIC SPECTROSCOPY	73
3.1. Zeeman Effect	73
3.2. Classical Theory of the Zeeman Effect	82
3.3. Classification of Zeeman Patterns	89
3.4. The Paschen-Back Effect	97
3.5. Magnetic Field and Hyperfine Structure	110
3.6. Atomic Level Polarization and Density Matrix	115
3.7. Multipole Moments of the Density Matrix	122

CHAPTER 4. QUANTIZATION OF THE ELECTROMAGNETIC FIELD (NON-RELATIVISTIC THEORY)	131
4.1. Quantization of the Harmonic Oscillator	131
4.2. The Electromagnetic Field as a Superposition of Plane Waves	134
4.3. Quantization of the Electromagnetic Field	137
4.4. The Stokes Parameters in the Formalism of Second Quantization	141
4.5. The Density Operator of the Radiation Field	144
CHAPTER 5. INTERACTION OF MATERIAL SYSTEMS WITH POLARIZED RADIATION (THE CLASSICAL APPROACH)	147
5.1. Propagation of Electromagnetic Waves in Anisotropic Media	147
5.2. Transfer Equations for Polarized Radiation	153
5.3. Application to Magnetic Lines	155
5.4. The Voigt Function and the Associated Dispersion Profile	162
5.5. Symmetry Properties of the Transfer Equations for Polarized Radiation	172
5.6. Geometrical Interpretation of the Transfer Equations for Polarized Radiation	176
5.7. Resonance Scattering and the Hanle Effect	179
5.8. The Scattering Phase Matrix in a Particular Case	185
5.9. Some Illustrations of the Hanle Effect	190
5.10. The Scattering Phase Matrix Expressed in Terms of Rotation Matrices	194
5.11. Spherical Tensors for Polarimetry	202
5.12. Further Properties of the Scattering Phase Matrix	212
5.13. Understanding Scattering Experiments through Oscillator Models	215
5.14. The Role of Collisions	220
5.15. Some Properties of the Collisional Kernels	230
5.16. Classification of the Physical Regimes	232
CHAPTER 6. INTERACTION OF MATERIAL SYSTEMS WITH POLARIZED RADIATION (THE QUANTUM APPROACH)	237
6.1. Equations of Motion	238
6.2. The Interaction Hamiltonian	240
6.3. The Dipole Approximation	244
6.4. Approximate Equations of Motion	249
6.5. Evolution Equations for the Atomic System	252
6.6. Evolution Equations for the Radiation Field	265
6.7. Evolution Equations for the Stokes Parameters	270

6.8. Magnetic Dipole Transitions	274
CHAPTER 7. STATISTICAL EQUILIBRIUM EQUATIONS AND RADIATIVE TRANSFER COEFFICIENTS FOR ATOMIC SYSTEMS	277
7.1. The Multi-Level Atom in the Standard Representation	278
7.2. The Multi-Level Atom in the Spherical Statistical Tensor Representation	284
7.3. Conjugation Properties of the Rates	290
7.4. The No-Coherence Case	291
7.5. The Multi-Term Atom in the Energy-Eigenvector Representation	295
7.6. The Multi-Term Atom in the Spherical Statistical Tensor Representation	301
7.7. Conjugation Properties of the Rates	311
7.8. The Multi-Level Atom as a Special Case of the Multi-Term Atom ...	312
7.9. The Multi-Level Atom with Hyperfine Structure	315
7.10. The Principle of Spectroscopic Stability	321
7.11. Selection Rules	325
7.12. Changing the Reference System	328
7.13. Collisional Rates	333
CHAPTER 8. RADIATIVE TRANSFER FOR POLARIZED RADIATION	349
8.1. Generalities	349
8.2. Formal Solution of the Radiative Transfer Equations: the Evolution Operator	350
8.3. Analytical Expressions for the Evolution Operator	353
8.4. Solution of the Radiative Transfer Equations by Diagonalization.....	358
8.5. Evolution Operator for Purely Dichroic or Purely Dispersive Media..	362
8.6. Evolution Operator and Mueller Matrices	364
8.7. Perturbative Solution of the Radiative Transfer Equations.....	366
8.8. An Alternative Form of the Radiative Transfer Equations	368
8.9. Solution of the Alternative Form of the Radiative Transfer Equations	370
CHAPTER 9. LINE FORMATION IN A MAGNETIC FIELD	375
9.1. Transfer Equation for Polarized Radiation in a Magnetized Stellar Atmosphere	375
9.2. Comparison with the Classical Theory	381

9.3. Collisional and Doppler Broadening.....	383
9.4. Different Forms of the Transfer Equation.....	386
9.5. Generalities and Symmetry Properties of the Transfer Equation.....	389
9.6. The Weak Field Approximation.....	397
9.7. Formal Solution through the Evolution Operator.....	409
9.8. The Unno-Rachkovsky Solution.....	411
9.9. More General Analytical Solutions.....	418
9.10. Solutions for Special Magnetic Field Orientations.....	422
9.11. The Stepanov Solution.....	426
9.12. The Intense Field Solution.....	428
9.13. The Seares Formulae.....	433
9.14. The Magnetic Field with Variable Azimuth.....	435
9.15. Numerical Solutions.....	437
9.16. Response Functions.....	449
9.17. Contribution Functions.....	456
9.18. Blends.....	459
9.19. The Magnetic Intensification Mechanism.....	460
9.20. Net Linear Polarization in Spectral Lines: the Differential Saturation Mechanism.....	466
9.21. Net Circular Polarization in Spectral Lines.....	473
9.22. The Importance of Magneto-Optical Effects.....	488
9.23. Transfer Equation for Fine-Structured and Hyperfine-Structured Lines.....	491
9.24. Line Formation in Stochastic Media.....	495
9.25. Isotropic, Microturbulent Magnetic Field.....	504
CHAPTER 10. NON-EQUILIBRIUM ATOMIC PHYSICS.....	509
10.1. The Two-Level Atom: Generalities.....	510
10.2. The Two-Level Atom: Resonance Polarization.....	513
10.3. The Two-Level Atom: the Hanle Effect.....	520
10.4. The Two-Level Atom: Spectral Details of the Hanle Effect.....	524
10.5. The Two-Level Atom: Resonance Polarization for Strong Magnetic Fields.....	528
10.6. The Two-Level Atom: the Role of Collisions.....	532
10.7. The Two-Level Atom: The Role of Lower-Level Polarization.....	535
10.8. The Two-Level Atom: the Hanle Effect with Lower-Level Polarization.....	545
10.9. The Two-Level Atom: the Role of Stimulated Emission.....	551
10.10. Three-Level Atoms: the Stepwise Excitation.....	557
10.11. Three-Level Atoms: the Raman Effect.....	560
10.12. Three-Level Atoms: an Example Leading to Population Inversion...	563
10.13. The Weak Anisotropy Approximation.....	567

10.14. The Two-Level Atom in the Weak Anisotropy Approximation	570
10.15. The Two-Term Atom: Generalities	580
10.16. The Two-Term Atom: Resonance Polarization	584
10.17. The Two-Term Atom: Spectral Details of Resonance Polarization ...	589
10.18. The Two-Term Atom: the Hanle Effect	598
10.19. The Two-Term Atom: the Franken Effect	605
10.20. The Two-Term Atom: the Alignment-to-Orientation Conversion Mechanism	607
10.21. The Two-Term Atom: the Role of Lower-Term Polarization	609
10.22. The Two-Level Atom with Hyperfine Structure	616
 CHAPTER 11. ASTROPHYSICAL APPLICATIONS: SOLAR MAGNETOMETRY	
11.1. The Longitudinal Magnetograph	626
11.2. The Vector Magnetograph	629
11.3. The Unno-fit Technique	634
11.4. The Bisector and the Center-of-Gravity Techniques	639
11.5. Unresolved Fields	644
11.6. Other Inversion Techniques	654
11.7. Disambiguation	661
 CHAPTER 12. ASTROPHYSICAL APPLICATIONS: RADIATION ANISOTROPY IN STELLAR ATMOSPHERES	
12.1. The Milne-Eddington Model Atmosphere	664
12.2. The Grey Atmosphere	668
12.3. Outer Atmospheres	673
12.4. Symmetry-Breaking Effects	677
 CHAPTER 13. ASTROPHYSICAL APPLICATIONS: THE OUTER LAYERS OF STELLAR ATMOSPHERES	
13.1. The Flat-Spectrum Approximation	689
13.2. Velocity/Density-Matrix Correlations and the Approximation of Complete Redistribution on Velocities	691
13.3. Resonance Polarization and the Hanle Effect in the Absence of Velocity/Density-Matrix Correlations	698
13.4. Diagnostics of Magnetic Fields in Solar Prominences	710
13.5. Diagnostics of Magnetic Fields from Coronal Forbidden Lines	715

13.6. Resonance Polarization in the Presence of Velocity/Density-Matrix Correlations	720
13.7. The Hanle Effect in the Presence of Velocity/Density-Matrix Correlations	730

CHAPTER 14. ASTROPHYSICAL APPLICATIONS:
 STELLAR ATMOSPHERES 737

14.1. The Non-LTE Problem	737
14.2. The Two-Level Atom: Non-LTE Theory for Weak Magnetic Fields (Hanle Effect Regime)	742
14.3. The Two-Level Atom: Non-LTE Theory for Strong Magnetic Fields	760
14.4. The Non-LTE Regime of Order 1.5	767
14.5. The Non-LTE Problem for More Complicated Atomic Models	769
14.6. Applications to Realistic Atmospheres: Polarization in the Continuum Spectrum	774
14.7. Applications to Realistic Atmospheres: Approximate Results on the Polarization of the Fraunhofer Spectrum	783
14.8. Alternative Methods for the Solution of the Non-LTE Problem	787

APPENDIX

A1. A Fortran Code for Computing 3- <i>j</i> , 6- <i>j</i> , and 9- <i>j</i> Symbols	791
A2. Sample Evaluation of a Quantity Involving the Contraction of 3- <i>j</i> Coefficients	794
A3. Momentum and Angular Momentum of the Electromagnetic Field ...	796
A4. Multipole Components of Collisional Rates	799
A5. Explicit Expression for the Exponential of the Propagation Matrix ..	803
A6. Diagonalization of the Propagation Matrix	809
A7. Formulae for the Calculation of the Evolution Operator	812
A8. The Feautrier Method: Numerical Details	813
A9. The Diagonal Element Lambda-Operator (DELO) Method: Numerical Details	818
A10. Equivalent Width in the Presence of Depth-Dependent Line Shifts ...	820
A11. Net Circular Polarization in Blends	822
A12. Evolution Operator in Stochastic Media	824
A13. Properties of the Generalized Profiles	829
A14. Properties of the Symbol $[W_{KK'Q}(\beta_\ell L_\ell S\beta_u L_u; B)]_{fs}$	835
A15. A Property of the Hopf Function	838
A16. A Numerical Algorithm for the Solution of the Hopf Equation	840
A17. Symmetry Properties of the Comoving-Frame Radiation Field Tensor for a Cylindrically Symmetrical Atmosphere	841

A18. Redistribution Matrix for a Maxwellian Distribution of Velocities....	843
A19. Properties of the Kernel $\mathcal{K}_{QQ'}^K(R_B)$	844
A20. The Multipole Coupling Coefficients	845
A21. The Calculation of a Double Integral.....	850
A22. The Generalization of the $\sqrt{\epsilon}$ -Law.....	853
A23. The Generalized Multipole Coupling Coefficients	859
A24. Reduced Matrix Elements for Photoionization Cross Sections.....	863
