Preface	xiii
I Introductory Survey, Electromagnetism as a Gauge Theory, and Relativistic Quantum Mechanics	1
1 The Particles and Forces of the Standard Model	3
1.1 Introduction: the Standard Model	3
1.2 The fermions of the Standard Model	4
1.2.1 Leptons	4
1.2.2 Quarks	8
1.3 Particle interactions in the Standard Model	12
1.3.1 Classical and quantum fields	12
1.3.2 The Yukawa theory of force as virtual quantum exchange	15
1.3.3 The one-quantum exchange amplitude	19
1.3.4 Electromagnetic interactions	21
1.3.5 Weak interactions	22
1.3.6 Strong interactions	26
1.3.7 The gauge bosons of the Standard Model	29
1.4 Renormalization and the Higgs sector of the Standard Model	30
1.4.1 Renormalization	30
1.4.2 The Higgs boson of the Standard Model	33
1.5 Summary	34
Problems	35
2 Electromagnetism as a Gauge Theory	41
2.1 Introduction	41
2.2 The Maxwell equations: current conservation	43
2.3 The Maxwell equations: Lorentz covariance and gauge invariance	45
2.4 Gauge invariance (and covariance) in quantum mechanics	49
2.5 The argument reversed: the gauge principle	52
2.6 Comments on the gauge principle in electromagnetism	56
Problems	62

3	Relativistic Quantum Mechanics	63
3.1	The Klein–Gordon equation	63
3.1.1	Solutions in coordinate space	64
3.1.2	Probability current for the KG equation	65
3.2	The Dirac equation	66
3.2.1	Free-particle solutions	69
3.2.2	Probability current for the Dirac equation	70
3.3	Spin	72
3.4	The negative-energy solutions	74
3.4.1	Positive-energy spinors	74
3.4.2	Negative-energy spinors	75
3.4.3	Dirac’s interpretation of the negative-energy solutions of the Dirac equation	76
3.4.4	Feynman’s interpretation of the negative-energy solutions of the KG and Dirac equations	77
3.5	Inclusion of electromagnetic interactions via the gauge principle: the Dirac prediction of $g = 2$ for the electron	80
	Problems	83
4	Lorentz Transformations and Discrete Symmetries	87
4.1	Lorentz transformations	87
4.1.1	The KG equation	87
4.1.2	The Dirac equation	89
4.2	Discrete transformations: P , C and T	95
4.2.1	Parity	95
4.2.2	Charge conjugation	99
4.2.3	CP	103
4.2.4	Time reversal	104
4.2.5	CPT	108
	Problems	109
II	Introduction to Quantum Field Theory	113
5	Quantum Field Theory I: The Free Scalar Field	115
5.1	The quantum field: (i) descriptive	115
5.2	The quantum field: (ii) Lagrange–Hamilton formulation	125
5.2.1	The action principle: Lagrangian particle mechanics	125
5.2.2	Quantum particle mechanics à la Heisenberg–Lagrange–Hamilton	129
5.2.3	Interlude: the quantum oscillator	131
5.2.4	Lagrange–Hamilton classical field mechanics	133
5.2.5	Heisenberg–Lagrange–Hamilton quantum field mechanics	137
5.3	Generalizations: four dimensions, relativity and mass	144
	Problems	146

6	Quantum Field Theory II: Interacting Scalar Fields	149
6.1	Interactions in quantum field theory: qualitative introduction	149
6.2	Perturbation theory for interacting fields: the Dyson expansion of the S -matrix	152
6.2.1	The interaction picture	153
6.2.2	The S -matrix and the Dyson expansion	156
6.3	Applications to the 'ABC' theory	158
6.3.1	The decay $C \rightarrow A + B$	159
6.3.2	$A + B \rightarrow A + B$ scattering: the amplitudes	163
6.3.3	$A + B \rightarrow A + B$ scattering: the Yukawa exchange mechanism, s and u channel processes	172
6.3.4	$A + B \rightarrow A + B$ scattering: the differential cross section	174
6.3.5	$A + B \rightarrow A + B$ scattering: loose ends	177
	Problems	179
7	Quantum Field Theory III: Complex Scalar Fields, Dirac and Maxwell Fields; Introduction of Electromagnetic Interactions	183
7.1	The complex scalar field: global $U(1)$ phase invariance, particles and antiparticles	184
7.2	The Dirac field and the spin-statistics connection	191
7.3	The Maxwell field $A^\mu(x)$	196
7.3.1	The classical field case	196
7.3.2	Quantizing $A^\mu(x)$	199
7.4	Introduction of electromagnetic interactions	206
7.5	P , C and T in quantum field theory	210
7.5.1	Parity	210
7.5.2	Charge conjugation	211
7.5.3	Time reversal	213
	Problems	215
III	Tree-Level Applications in QED	219
8	Elementary Processes in Scalar and Spinor Electrodynamics	221
8.1	Coulomb scattering of charged spin-0 particles	221
8.1.1	Coulomb scattering of s^+ (wavefunction approach)	221
8.1.2	Coulomb scattering of s^+ (field-theoretic approach)	224
8.1.3	Coulomb scattering of s^-	225
8.2	Coulomb scattering of charged spin- $\frac{1}{2}$ particles	227
8.2.1	Coulomb scattering of e^- (wavefunction approach)	227
8.2.2	Coulomb scattering of e^- (field-theoretic approach)	230
8.2.3	Trace techniques for spin summations	230
8.2.4	Coulomb scattering of e^+	233
8.3	e^-s^+ scattering	234
8.3.1	The amplitude for $e^-s^+ \rightarrow e^-s^+$	234
8.3.2	The cross section for $e^-s^+ \rightarrow e^-s^+$	239

8.4	Scattering from a non-point-like object: the pion form factor in $e^- \pi^+ \rightarrow e^- \pi^+$	242
8.4.1	e^- scattering from a charge distribution	243
8.4.2	Lorentz invariance	244
8.4.3	Current conservation	245
8.5	The form factor in the time-like region: $e^+e^- \rightarrow \pi^+\pi^-$ and crossing symmetry	247
8.6	Electron Compton scattering	250
8.6.1	The lowest-order amplitudes	250
8.6.2	Gauge invariance	251
8.6.3	The Compton cross section	252
8.7	Electron muon elastic scattering	254
8.8	Electron–proton elastic scattering and nucleon form factors	257
8.8.1	Lorentz invariance	258
8.8.2	Current conservation	259
	Problems	263
9	Deep Inelastic Electron–Nucleon Scattering and the Parton Model	269
9.1	Inelastic electron–proton scattering: kinematics and structure functions	269
9.2	Bjorken scaling and the parton model	272
9.3	Partons as quarks and gluons	281
9.4	The Drell–Yan process	284
9.5	e^+e^- annihilation into hadrons	288
	Problems	292
IV	Loops and Renormalization	297
10	Loops and Renormalization I: The ABC Theory	299
10.1	The propagator correction in ABC theory	300
10.1.1	The $O(g^2)$ self-energy $\Pi_C^{[2]}(q^2)$	300
10.1.2	Mass shift	307
10.1.3	Field strength renormalization	308
10.2	The vertex correction	311
10.3	Dealing with the bad news: a simple example	314
10.3.1	Evaluating $\Pi_C^{[2]}(q^2)$	314
10.3.2	Regularization and renormalization	316
10.4	Bare and renormalized perturbation theory	318
10.4.1	Reorganizing perturbation theory	318
10.4.2	The $O(g_{\text{ph}}^2)$ renormalized self-energy revisited: how counter terms are determined by renormalization conditions	321
10.5	Renormalizability	324
	Problems	326

11 Loops and Renormalization II: QED	327
11.1 Counter terms	327
11.2 The $O(e^2)$ fermion self-energy	329
11.3 The $O(e^2)$ photon self-energy	331
11.4 The $O(e^2)$ renormalized photon self-energy	333
11.5 The physics of $\bar{\Pi}_\gamma^{[2]}(q^2)$	336
11.5.1 Modified Coulomb's law	336
11.5.2 Radiatively induced charge form factor	338
11.5.3 The running coupling constant	339
11.5.4 $\bar{\Pi}_\gamma^{[2]}$ in the s -channel	344
11.6 The $O(e^2)$ vertex correction, and $Z_1 = Z_2$	345
11.7 The anomalous magnetic moment and tests of QED	348
11.8 Which theories are renormalizable – and does it matter?	353
Problems	360
A Non-relativistic Quantum Mechanics	361
B Natural Units	365
C Maxwell's Equations: Choice of Units	369
D Special Relativity: Invariance and Covariance	371
E Dirac δ-Function	377
F Contour Integration	387
G Green Functions	393
H Elements of Non-relativistic Scattering Theory	399
H.1 Time-independent formulation and differential cross section	399
H.2 Expression for the scattering amplitude: Born approximation	401
H.3 Time-dependent approach	402
I The Schrödinger and Heisenberg Pictures	405
J Dirac Algebra and Trace Identities	407
J.1 Dirac algebra	407
J.1.1 γ matrices	407
J.1.2 γ_5 identities	407
J.1.3 Hermitian conjugate of spinor matrix elements	408
J.1.4 Spin sums and projection operators	408
J.2 Trace theorems	409
