	<i>Preface to the Third Edition</i>	vii
	<i>Preface to the Second Edition</i>	ix
	<i>Preface to the First Edition</i>	xi
1.	Introduction	1
1.1	Radiation and Particle Interactions	3
1.2	Particles and Types of Interaction	215
1.2.1	Quarks and Leptons	6
1.3	Relativistic Kinematics	227
1.3.1	The Two-Body Scattering	10
1.3.2	The Invariant Mass	13
1.3.2.1	Lorentz-Invariant Quantities and Phase Space	14
1.3.3	Relativistic Doppler Effect	18
1.3.3.1	Redshift Parameter and Astronomy	21
1.4	Atomic Mass, Weight, Standard Weight and Mass Unit	23
1.5	Cross Section and Differential Cross Section	24
1.6	Coulomb Single-Scattering Cross Section	26
1.6.1	Rutherford's Formula and Average Energy Transferred	30
1.7	Detectors and Large Experimental Apparatus	33
1.7.1	Trigger, Monitoring, Data Acquisition, Slow Control	35
1.7.2	General Features of Particle Detectors and Detection Media	254
1.7.3	Radiation Environments and Silicon Devices	36
1.7.3	Radiation Environments and Silicon Devices	42
2.	Electromagnetic Interaction of Radiation in Matter	45
2.1	Passage of Ionizing Particles through Matter	46
2.1.1	The Collision Energy-Loss of Massive Charged Particles	46
2.1.1.1	The Barkas–Andersen Effect	56
2.1.1.2	The Shell Correction Term	58

of Céline Lebel	2.1.1.3	Energy-Loss Minimum, Density Effect and Relativistic Rise	60
former PhD student at the	2.1.1.4	Restricted Energy-Loss and Fermi Plateau	63
laboratories of the	2.1.1.5	Energy-Loss Formula for Compound Materials . .	67
of high energy e-beam	2.1.2	Energy-Loss Fluctuations	68
sented in	2.1.2.1	δ -Rays, Straggling Function, and Transport Equation	68
droplet detectors	2.1.2.2	The Landau–Vavilov Solutions for the Transport Equation	71
and Viktor Zace	2.1.2.3	The Most Probable Collision Energy-Loss for Massive Charged Particles	73
with ionization	2.1.2.4	Improved Energy-Loss Distribution and Distant Collisions	77
purity borrows material	2.1.2.5	Distant Collision Contribution to Energy Straggling in Thin Silicon Absorbers	80
Alexander Tchepaklov and	2.1.2.6	Improved Energy-Loss Distribution for Multi-Particles in Silicon	83
iv We wish to adapt figures from their books. For their permission in reproducing	2.1.3	Range of Heavy Charged Particles and Bragg Curve	84
xierials and figures	2.1.4	Heavy Ions	91
American Physical Society	2.1.4.1	Nuclear Stopping Power at Non-Relativistic Energies	93
ix nization for Nuclear and Particle Physics	2.1.4.2	Nuclear Stopping Power at Relativistic Energies	99
I Agency (IAEA), the Institut	2.1.5	Ionization Yield in Gas Media	106
Zeitschrift für Physik	2.1.6	Passage of Electrons and Positrons through Matter	108
Italian Physical Society	2.1.6.1	Collision Losses by Electrons and Positrons	109
collaboration	2.1.6.2	Most Probable Energy-Loss of Electrons and Positrons	112
Rastausser	2.1.6.3	Practical Range of Electrons	114
Berkeley National Laboratory	2.1.7	Radiation Energy-Loss by Electrons and Positrons	117
for the	2.1.7.1	The Landau–Pomeranchuk–Migdal Effect: The Bremsstrahlung Suppression	130
according	2.1.7.2	Collision and Radiation Stopping Powers	138
AI	2.1.7.3	Radiation Yield and Bremsstrahlung Angular Distribution	138
81	2.1.7.4	Radiation Length and Complete Screening Approximation	146
IS	2.1.7.5	Critical Energy	150
83	2.2	Multiple and Extended Volume Coulomb Interactions	151
88	2.2.1	The Multiple Coulomb Scattering	151
96	2.2.2	Emission of Čerenkov Radiation	156
98	2.2.3	Emission of Transition Radiation	162

2.3	Photon Interaction and Absorption in Matter	168
2.3.1	The Photoelectric Effect	170
2.3.1.1	The Auger Effect	176
2.3.2	The Compton Scattering	177
2.3.2.1	The Klein–Nishina Equation for Unpolarized Photons	193
2.3.2.2	Electron Binding Corrections to Compton and Rayleigh Scatterings	187
2.3.2.3	The Thomson Cross Section	190
2.3.2.4	Radiative Corrections and Double Compton Effect	192
2.3.2.5	Inverse Compton Scattering	193
2.3.2.6	Power Loss of Electrons due to Inverse Compton Scattering	199
2.3.3	Pair Production	204
2.3.3.1	Pair Production in the Field of a Nucleus	204
2.3.3.2	Pair Production in the Electron Field	216
2.3.3.3	Angular Distribution of Electron and Positron Pairs	218
2.3.4	Photonuclear Scattering, Absorption and Production	218
2.3.5	Attenuation Coefficients, Dosimetric and Radiobiological Quantities	223
2.4	Electromagnetic Cascades in Matter	237
2.4.1	Phenomenology and Natural Units of Electromagnetic Cascades	238
2.4.2	Propagation and Diffusion of Electromagnetic Cascades in Matter	240
2.4.2.1	Rossi's Approximation B and Cascade Multiplication of Electromagnetic Shower	240
2.4.2.2	Longitudinal Development of the Electromagnetic Shower	243
2.4.2.3	Lateral Development of Electromagnetic Showers	247
2.4.2.4	Energy Deposition in Electromagnetic Cascades	254
2.4.3	Shower Propagation and Diffusion in Complex Absorbers	255
3.1	Nuclear Interactions in Matter	257
3.1	General Properties of the Nucleus	257
3.1.1	Radius of Nuclei and the Liquid Droplet Model	260
3.1.1.1	Droplet Model and Semi-Empirical Mass Formula	261
3.1.2	Form Factor and Charge Density of Nuclei	263

3.1.3	Angular and Magnetic Moment, Shape of Nuclei	266
3.1.4	Stable and Unstable Nuclei	267
3.1.4.1	The β -Decay and the Nuclear Capture	269
3.1.4.2	The α -Decay	271
3.1.5	Fermi Gas Model and Nuclear Shell Model	273
3.1.5.1	γ Emission by Nuclei	278
3.2	Phenomenology of Interactions on Nuclei at High Energy	279
3.2.1	Energy and A -Dependence of Cross Sections	280
3.2.1.1	Collision and Inelastic Length	281
3.2.2	Coherent and Incoherent Interactions on Nuclei	281
3.2.2.1	Kinematics for Coherent Condition	285
3.2.2.2	Coherent and Incoherent Scattering	288
3.2.3	Multiplicity of Charged Particles and Angular-Distribution of Secondaries	293
3.2.3.1	Rapidity and Pseudorapidity Distributions	298
3.2.4	Emission of Heavy Prongs	302
3.2.5	The Nuclear Spallation Process	305
3.2.6	Nuclear Temperature and Evaporation	308
3.3	Hadronic Shower Development and Propagation in Matter	312
3.3.1	Phenomenology of the Hadronic Cascade in Matter	313
3.3.2	Natural Units in the Hadronic Cascade	316
3.3.3	Longitudinal and Lateral Hadronic Development	318
4.	Radiation Environments and Damage in Silicon Semiconductors	325
4.1	Radiation Environments	327
4.1.1	High-Luminosity Machines Environments for Particle Physics Experiments	327
4.1.1.1	Ionization Process and LHC Collider Environment	331
4.1.1.2	Non-Ionization Processes, NIEL Scaling Hypothesis and Collider Environments	332
4.1.2	Space Radiation Environment	335
4.1.2.1	Solar Wind	339
4.1.2.2	Solar and Heliospheric Magnetic Field	346
4.1.2.3	Extension of the Heliosphere and the Earth Magnetosphere	357
4.1.2.4	Propagation of Galactic Cosmic Rays through Interplanetary Space	362
4.1.2.5	Diffusion Tensor	372
4.1.2.6	Modulated Differential Intensities of Cosmic Rays and Drift Velocity	375

6.8.1	4.1.2.7 Solar, Heliospheric and Galactic Cosmic Rays in the Interplanetary Space	578
6.8.1.1	4.1.2.8 Trapped Particles and Earth Magnetosphere	381
6.8.2	4.1.3 Neutron Spectral Fluence in Nuclear Reactor Environment	386
6.8.3	4.1.3.1 Fast Neutron Cross Section on Silicon	394
6.8.3.2	4.1.3.2 Energy Distribution of Reactor Neutrons and Classification	395
4.2	4.2 Relevant Processes of Energy Deposition and Damage	396
4.2.1	4.2.1 NIEL and Displacement Damage	397
4.2.1.1	4.2.1.1 Knock-On Atoms and Displacement Cascade	402
4.2.1.2	4.2.1.2 Norgett–Robinson–Torrens Expression	405
4.2.1.3	4.2.1.3 Neutron Interactions	406
4.2.1.4	4.2.1.4 Interactions of Protons, α -Particles and Heavy-Isotopes	407
4.2.1.5	4.2.1.5 Electron Interactions	412
4.2.1.6	4.2.1.6 Damage Function	421
4.2.2	4.2.2 Radiation Induced Defects	424
4.2.3	4.2.3 Ionization Energy-Loss and NIEL Processes	431
4.2.3.1	4.2.3.1 Imparted Dose in Silicon	431
4.2.3.2	4.2.3.2 Ionization Damage	435
4.3	4.3 Radiation Induced Defects and Modification of Silicon Bulk and $p - n$ Junction Properties	437
4.3.1	4.3.1 Displacement Damage Effect on Minority Carrier Lifetime	438
4.3.2	4.3.2 Carrier Generation and Leakage Current	440
4.3.3	4.3.3 Diode Structure and Rectification Down to Cryogenic Temperature	442
4.3.3.1	4.3.3.1 Rectification Property Up to Large Fast-Neutron Fluences at Room Temperature	443
4.3.3.2	4.3.3.2 Large Radiation Damage and $p - i - n$ Structure at Room Temperature	448
4.3.3.3	4.3.3.3 $I - V$ Characteristics Down to Cryogenic Temperature	449
4.3.4	4.3.4 Complex Impedance of Junctions and Cryogenic Temperatures	454
4.3.5	4.3.5 Resistivity, Hall Coefficient and Hall Mobility at Large Displacement Damage	461
4.3.6	4.3.6 AFM Structure Investigation in Irradiated Devices	472
5.	5. Scintillating Media and Scintillator Detectors	475
5.1	5.1 Scintillators	475

5.1.1	Organic Scintillators	476
5.1.2	Inorganic Scintillators	479
5.2	The Čerenkov Detectors	482
5.2.1	Threshold Čerenkov Detectors	485
5.2.2	Differential Čerenkov Detectors	489
5.2.3	Ring Imaging Čerenkov (RICH) Detectors	490
5.3	Wavelength Shifters	491
5.4	Transition Radiation Detectors (TRD)	493
5.5	Scintillating Fibers	495
5.6	Detection of the Scintillation Light	498
5.7	Applications in Calorimetry	503
5.8	Application in Time-of-Flight (ToF) Technique	504
6.	Solid State Detectors	507
6.1	Basic Principles of Operation	508
6.1.1	Unpolarized $p - n$ Junction	510
6.1.2	Polarized $p - n$ Junction	513
6.1.3	Capacitance	516
6.1.4	Charge Collection Measurements	517
6.1.5	Charge Transport in Silicon Diodes	518
6.1.6	Leakage or Reverse Current	529
6.1.7	Noise Characterization of Silicon Detectors	531
6.2	Charge Collection Efficiency and Hecht Equation	533
6.3	Spectroscopic Characteristics of Standard Planar Detectors	538
6.3.1	Energy Resolution of Standard Planar Detectors	541
6.4	Microstrip Detectors	542
6.5	Pixel Detector Devices	548
6.5.1	The MediPix-Type Detecting Device	549
6.5.2	Examples of Application: Particle Physics	552
6.5.2.1	Electrons and Photons	552
6.5.2.2	Neutrons	552
6.5.2.3	Muons, Pions and Protons	554
6.5.2.4	α -Particles and Heavier Ions	555
6.5.2.5	Charge Sharing	555
6.6	Photovoltaic and Solar Cells	559
6.7	Neutrons Detection with Silicon Detectors	564
6.7.1	Principles of Neutron Detection with Silicon Detectors	565
6.7.1.1	Signal in Silicon Detectors for Thermal Neutrons	568
6.7.1.2	Signals in Silicon Detectors by Fast Neutrons	573
6.7.2	3-D Neutron Detectors	577
6.8	Radiation Effects on Silicon Semiconductor Detectors	578

6.8.1	MESA Radiation Detectors	578
6.8.1.1	Electrical Features of Planar MESA Detectors	579
6.8.1.2	Spectroscopic Characteristics of MESA Detectors	581
6.8.2	Results of Irradiation Tests of Planar MESA Detectors . .	582
6.8.3	Irradiation with Low-Energy Protons in High-Resistivity Silicon Detectors and NIEL	587
7.	Displacement Damage and Particle Interactions in Silicon Devices	595
7.1	Displacement Damage in Irradiated Bipolar Transistors	597
7.1.1	Transit Time of Minority Carriers Across the Base	601
7.1.2	Gain Degradation of Bipolar Transistors and Messenger–Spratt Equation	602
7.1.3	Surface and Total Dose Effects on the Gain Degradation of Bipolar Transistors	606
7.1.4	Generalized Messenger–Spratt Equation for Gain Degradation of Bipolar Transistors	608
7.1.4.1	Experimental Evidence of Approximate NIEL Scaling	609
7.1.5	Transistor Gain and Self-Annealing	611
7.1.6	Radiation Effects on Low-Resistivity Base Spreading- Resistance	612
7.2	Single Event Effects	614
7.2.1	Classification of SEE	617
7.2.2	SEE in Spatial Radiation Environment	618
7.2.3	SEE in Atmospheric Radiation Environment	620
7.2.4	SEE in Terrestrial Radiation Environment	621
7.2.5	SEE Produced by Radioactive Sources	621
7.2.6	SEE in Accelerator Radiation Environment	624
7.2.7	SEE Generation Mechanisms	625
7.2.7.1	Direct Ionization	625
7.2.7.2	Indirect Ionization	627
7.2.7.3	Linear Energy Transfer (LET)	629
7.2.7.4	Sensitive Volume	630
7.2.7.5	Critical Charge	630
7.2.8	SEE Cross Section	634
7.2.8.1	Calculation of SEU Rate for Ions	635
7.2.8.2	Calculation of SEU Rate for Protons and Neutrons	638
7.2.9	SEE Mitigation	641
8.	Gas Filled Chambers	643

8.1	The Ionization Chamber	643
8.2	Recombination Effects	646
8.2.1	Germinate or Initial Recombination	647
8.2.2	Columnar Recombination	647
8.2.3	The Box Model	648
8.2.4	Recombination with Impurities	649
8.3	Example of Ionization Chamber Application: The α -Cell	652
8.3.1	The α -Cell	652
8.3.2	Charge Measurement with the α -Cell	655
8.3.3	Examples of Pollution Tests Using the α -Cell	660
8.4	Proportional Counters	662
8.4.1	Avalanche Multiplication	662
8.5	Proportional Counters: Cylindrical Coaxial Wire Chamber	665
8.6	Multiwire Proportional Chambers (MWPC)	672
8.7	The Geiger–Mueller Counter	674
9.	Principles of Particle Energy Determination	677
9.1	Experimental Physics and Calorimetry	677
9.1.1	Natural Units in Shower Propagation	681
9.2	Electromagnetic Sampling Calorimetry	681
9.2.1	Electromagnetic Calorimeter Response	681
9.2.2	The e/mip Ratio	684
9.2.2.1	e/mip Dependence on Z-Values of Readout and Passive Absorbers	688
9.2.2.2	e/mip Dependence on Absorber Thickness	692
9.2.3	e/mip Reduction in High-Z Sampling Calorimeters: The Local Hardening Effect	692
9.3	Principles of Calorimetry with Complex Absorbers	696
9.3.1	The Filtering Effect and How to Tune the e/mip Ratio	698
9.3.2	e/mip Reduction by Combining Local Hardening and Filtering Effects	703
9.4	Energy Resolution in Sampling Electromagnetic Calorimetry	705
9.4.1	Visible Energy Fluctuations	705
9.4.1.1	Calorimeter Energy Resolution for Dense Readout Detectors	707
9.4.1.2	Calorimeter Energy Resolution for Gas Readout Detectors	711
9.4.2	Effect of Limited Containment on Energy Resolution	715
9.5	Homogeneous Calorimeters	719
9.5.1	General Considerations	719
9.5.2	Energy Measurement	722
9.6	Position Measurement	729

9.7	Electron Hadron Separation	733
9.8	Hadronic Calorimetry (PET)	734
9.8.1	Intrinsic Properties of the Hadronic Calorimeter	734
9.8.1.1	The e/h , e/π , h/mip and π/mip Ratios	735
9.8.1.2	Compensating Condition $e/h = e/\pi = 1$ and Linear Response	739
9.9	Methods to Achieve the Compensation Condition	743
9.9.1	Compensation Condition by Detecting Neutron Energy . .	744
9.9.2	Compensation Condition by Tuning the e/mip Ratio . .	750
9.10	Compensation and Hadronic Energy Resolution	760
9.10.1	Non-Compensation Effects and the $\phi(e/\pi)$ Term . . .	766
9.10.2	Determination of Effective Intrinsic Resolutions	768
9.10.3	Effect of Visible-Energy Losses on Calorimeter Energy Resolution	770
9.11	Calorimetry at Very High Energy	771
9.11.1	General Considerations	771
9.11.2	Air Showers (AS) and Extensive Air Showers (EAS) . .	775
9.11.3	Electromagnetic Air Showers	778
9.11.3.1	Longitudinal Development	778
9.11.3.2	Lateral Development	779
9.11.4	Hadronic Extensive Air Showers	781
9.11.5	The Muon Component of Extensive Air Showers	783
10.	Superheated Droplet (Bubble) Detectors and CDM Search .	785
10.1	The Superheated Droplet Detectors and their Operation . .	788
10.1.1	Neutron Response Measurement	792
10.1.2	Alpha-Particle Response Measurement	796
10.1.3	Radon Detection	799
10.1.4	Spontaneous Nucleation	800
10.1.5	Signal Measurement with Piezoelectric Sensors	801
10.2	Search of Cold Dark Matter (CDM)	802
10.2.1	Calculation of the Neutralino–Nucleon Exclusion Limits .	803
10.2.1.1	Spin-Independent or Coherent Cross Section	804
10.2.1.2	Spin-Dependent or Incoherent Cross Section	807
10.2.1.3	Calculation of $\langle S_p \rangle$ and $\langle S_n \rangle$ in Nuclei	811
10.2.1.4	Shell Models Calculation and Validation of $\langle S_p \rangle$ and $\langle S_n \rangle$	817
10.2.2	The PICASSO Experiment, an Example	817
10.2.3	Status of Dark Matter Searches	819
10.3	Double Beta Decay	821
11.	Medical Physics Applications	827

11.1	Single Photon Emission Computed Tomography (SPECT)	829
11.2	Positron Emission Tomography (PET)	841
11.3	Magnetic Resonance Imaging (MRI)	845
11.3.1	Physical Basis of MRI	845
11.3.2	Forming an Image	848
11.3.2.1	Spin-Echo	848
11.3.2.2	Gradient-Echo	848
11.3.2.3	Space Positioning	849
11.3.2.4	Flows	850
11.3.2.5	Functional MRI	850
11.4	X-Ray Medical Imaging with MediPix Devices	851
11.4.1	The Contrast	852
11.4.2	The Modulation Transfer Function	852
11.4.3	The Detective Quantum Efficiency	853
Appendix A General Properties and Constants		857
