Author xxiii
List of Symbols xxv
List of Abbreviations xxix

PART ONE Fundamentals **1**

1 Introduction **3**
1.1 The Concept of Distributed Optical Fibre Sensors 3
1.1.1 Optical Fibre Sensors 3
1.1.2 The Advent of Multiplexed Sensors 6
1.1.3 Distributed Optical Fibre Sensors 7
1.2 Historical Development of DOFS 9
1.2.1 Optical TDR: An Enabling Technology 9
1.2.2 Distributed Temperature Sensors 11
1.2.3 Elastic and Inelastic Scattering 11
1.2.4 Raman OTDR 13
1.2.5 Brillouin-Based Distributed Sensing 14
1.2.6 Distributed Sensing with Rayleigh Backscatter 15
1.3 Performance Criteria in Distributed Fibre-Optic Sensors 16
1.3.1 Four Key Criteria 16
1.3.1.1 Measurand resolution 17
1.3.1.2 Range 17
1.3.1.3 Spatial resolution 17
1.3.1.4 Sampling resolution 19
1.3.1.5 Measurement time 19
1.3.2 Interplay between Performance Criteria 20
1.3.3 Estimation of Key Performance Parameters 21
1.3.4 Sensor Accuracy and Cross-Talk 22
1.4 History of Commercialisation: Successes and Failures 22
1.4.1 Raman DTS 22
1.4.2 Commercial Brillouin-Based Distributed Strain and Temperature Sensors 24
1.4.3 Distributed Vibration Sensing 24
1.5 Other Technologies 25
1.6 Distributed Sensing and Dense Point Sensor Arrays 25
1.7 Organisation of the Book 26
References 26

2 Optical Fibre Technology **31**
2.1 Propagation in Optical Fibres 31
2.1.1 Types of Optical Fibre 33
2.1.1.1 Step-index multimode fibres 33
2.1.1.2 Graded-index multimode fibres 34
2.1.1.3 Single-mode optical fibres 36
2.1.2 Loss Mechanisms 37
2.1.2.1 Absorption 37
2.1.2.2 Scattering 37
2.1.2.3 Other loss mechanisms 39
2.1.3 Bandwidth of Optical Fibres 40
2.2 Construction of Optical Fibres 41
2.3 Principal Components Used in Distributed Sensing Systems 42
2.3.1 Lasers 42
2.3.1.1 Broad contact semiconductor lasers 42
2.3.1.2 Fabry-Pérot single-mode laser diodes 43
2.3.1.3 Semiconductor distributed feedback lasers 44
2.3.1.4 External cavity feedback semiconductor lasers 44
2.3.1.5 Semiconductor DFB lasers with active phase/frequency feedback 44
2.3.1.6 Fibre DFB lasers 44
2.3.1.7 Tunable lasers 45
2.3.1.8 Symbols for optical sources 45
2.3.2 Optical Amplifiers 45
2.3.2.1 Doped fibre amplifiers 45
2.3.2.2 Semiconductor optical amplifiers 46
2.3.2.3 Symbol for optical amplifiers 46
2.3.3 Fused-Taper Couplers 46
2.3.4 Micro-Bulk Optics 47
2.3.5 Isolators, Circulators and Faraday Rotation Mirrors 47
2.3.6 Fibre Bragg Gratings 47
2.3.7 Modulators 48
2.3.7.1 Acousto-optic modulators 48
2.3.7.2 Electro-optic modulators 49
2.3.8 Switches 49
2.3.9 Polarisation Controllers 50
2.3.10 Connectors and Splices 50
2.3.11 Detectors 50
2.3.12 Other Symbols 52
References 52

3 Principles of Optical Time-Domain Reflectometry (OTDR) for Distributed Sensing **55**
3.1 Optical Time-Domain Reflectometry 55
3.1.1 Single-Ended Measurement 56
3.1.2 Double-Ended Measurement 60
3.1.3 Capture Fraction 64
3.1.4 Coherence Effects 66
3.1.5 Signal Levels 72
3.2 OTDR System Design 73
3.2.1 Sources and Detectors 73
3.2.2 Common System Designs 74
3.2.3 Noise in Optical Receivers 75

3.2.3.1 Worked example 1: Multimode, short-wavelength OTDR 78
3.2.3.2 Worked example 2: Single-mode, long-wavelength OTDR 85
3.2.4 Overload Considerations 85
3.2.5 Acquisition and Further Processing 86
3.2.6 Limitations to Power Launched 87
3.3 Enhancing the OTDR Range 88
3.3.1 Improved Detection 88
3.3.1.1 Coherent detection systems 88
3.3.2 Photon Counting 91
3.3.3 Spread-Spectrum Techniques 92
3.3.3.1 OFDR 92
3.3.3.2 Coherent OFDR 92
3.3.3.3 Incoherent OFDR 94
3.3.3.4 Pulse compression coding 94
3.3.3.5 Frequency-diverse C-OTDR 99
3.3.4 Amplified OTDR Systems 101
3.4 Trends in OTDR 102
3.5 Applying Fibre Reflectometry to Distributed Sensing 102
References 103

PART TWO Distributed Sensing Technology 107

4 Raman-Based Distributed Temperature Sensors (DTSs) 109
4.1 Principles of Raman OTDR 109
4.1.1 Spontaneous Raman Scattering 109
4.1.2 Temperature Sensitivity of the Raman Scattering 111
4.1.3 Raman Backscatter Signals 114
4.2 Raman OTDR Design 115
4.2.1 Wavelength, Laser and Fibre Selection 117
4.2.2 Reference Coil Design 119
4.2.3 Receiver Design 120
4.2.4 Principal Types of Raman OTDR Systems 120
4.2.4.1 Short-range systems 120
4.2.4.2 High-performance systems operating at around 1064 nm 121
4.2.4.3 Long-range systems 121
4.3 Performance of Raman OTDR DTS Systems 121
4.3.1 Spatial Resolution 121
4.3.2 Temperature Resolution 122
4.3.3 Fundamental Limitations 122
4.3.4 Signal-to-Noise Ratio 125
4.3.5 Performance Comparisons: A Figure of Merit and Typical Specifications 125
4.4 Alternative Approaches to Raman OTDR 128
4.4.1 Optical Frequency-Domain Reflectometry (OFDR) 128
4.4.1.1 Data acquisition in Raman OFDR 129
4.4.1.2 Signal recovery 130
4.4.1.3 Comparison with OTDR methods 130
4.4.2 Pulse Compression Coding (PCC) 131
4.4.3 Systems for Very High Spatial Resolution 132

4.4.3.1 Time-correlated single-photon counting 134
4.4.3.2 Multichannel photon counting 136
4.4.3.3 Correction for dead time and other detector imperfections 136
4.4.3.4 Recent improvements in photon counting 136
4.4.3.5 Comparison with analog direct detection 137
4.5 Practical Issues and Solutions 137
4.5.1 Loss Compensation 137
4.5.1.1 Fibre degradation 138
4.5.1.2 Doubled-ended measurements 143
4.5.1.3 'J-fibre' configuration 144
4.5.1.4 Multi-wavelength measurements 145
4.5.1.5 Raman ratio with separate sources 145
4.5.1.6 Anti-Stokes Raman with Rayleigh loss correction 147
4.5.1.7 Dual sources separated by two Stokes shifts 148
4.5.1.8 Summary of the loss compensation methods 148
4.5.2 Calibration 149
4.5.3 Probe Power Limitations 150
4.5.3.1 Addressing the linear power limitation 151
4.5.3.2 The role of wavelength selection in extending linearity 152
4.5.4 Insufficient Filter Rejection 152
4.5.5 Forward Raman Scattering 153
4.5.6 High-Temperature Operation of Raman Sensors: Addressing the Reduction in Sensitivity 154
4.5.7 Brillouin Backscatter 154
4.6 Summary 155
References 155

5 Brillouin-Based Distributed Temperature and Strain Sensors 161
5.1 Spontaneous Brillouin Scattering 162
5.1.1 The Effect 162
5.1.2 Frequency Shift 162
5.1.3 Spectral Width 163
5.1.4 Sensitivity to Temperature and Strain 164
5.1.4.1 Sensitivity coefficients 164
5.1.4.2 Sensitivity of the intensity to temperature 165
5.1.4.3 Sensitivity of intensity to strain 166
5.1.4.4 Loss compensation for intensity measurements 166
5.1.4.5 Sensitivity of the Brillouin frequency shift 167
5.1.4.6 Coating and coupling effects 168
5.2 Stimulated Brillouin Scattering 169
5.3 Systems Based on SpBS 171
5.3.1 Optical Separation 171
5.3.2 Electrical Separation 177
5.3.3 Estimation of Frequency, Gain and Linewidth 183
5.3.4 Limitations and Benefits 184
5.3.4.1 Launched power 185
5.3.4.2 Spatial resolution 186
5.4 Recent Advances in Distributed Strain Sensing Based on SpBS 187
5.4.1 Remote Amplification for Range Extension 187

5.4.1.1 Distributed Raman amplification 188
5.4.1.2 Remotely pumped rare-earth-doped fibre amplifiers 190
5.4.1.3 Hybrid Raman/EDFA amplification 192
5.4.2 Fast Measurement Techniques 192
5.4.2.1 Frequency discriminators 192
5.4.2.2 Parallel multi-frequency acquisition 192
5.4.2.3 Signal tracking 193
5.4.3 Pulse Compression Coding 194
5.4.4 Simultaneous Multi-Frequency Measurement 194
5.4.5 Dual-Pulse Method in BOTDR 195
5.4.6 Spectral Efficiency 197
5.5 System Based on SBS 197
5.5.1 BOTDA 197
5.5.2 Optical Arrangements for BOTDA 199
5.5.3 Sensitivity and Spatial Resolution 203
5.5.4 Trade-Offs in BOTDA 203
5.5.5 Composite Pulse Methods in BOTDA 203
5.5.5.1 Single shaped pump interrogation 203
5.5.5.2 Differential pump interrogation 205
5.5.5.3 Simultaneous gain/loss interrogation 206
5.5.6 Pulse Compression Coding 206
5.5.6.1 Pulse compression coding for range extension 206
5.5.6.2 Pulse compression coding as an extension of composite pulse techniques 207
5.5.7 Slow Light Correction 207
5.5.8 BOFDA 208
5.5.9 Performance and Limitations 208
5.5.9.1 Parallel (multi-tone) acquisition approaches 208
5.5.9.2 Slope-assisted fast acquisition 210
5.5.9.3 Distance enhancements in BOTDA through remote amplification 210
5.5.9.4 Power limitations due to SPM 211
5.5.10 Phase Measurement in BOTDA 211
5.6 Brillouin Sensors Based on Coherence-Domain Reflectometry: BOCDA and BOCDR 213
5.6.1 BOCDA 213
5.6.1.1 Simplified BOCDA approach 215
5.6.1.2 Range extension 215
5.6.1.3 Background noise suppression 216
5.6.1.4 BOCDA using phase coding 216
5.6.1.5 Low coherence BOCDA 217
5.6.2 BOCDR 217
5.7 Dynamic Bragg Gratings 218
5.8 Polarisation Effects 220
5.9 Summary 221
References 222

6 Rayleigh Backscatter: Distributed Vibration Sensors and Static Measurements 231
6.1 Distributed Vibration Sensors 232
6.1.1 Recall of Coherent Rayleigh Backscatter 232
6.1.2 Timescales in Distributed Vibration Sensing 232
6.1.3 Modelling of Coherent OTDR 234
6.2 Amplitude-Based Coherent Rayleigh Backscatter DVS 235

6.3 Differential Phase-Measuring DVS (dΦ-DVS) 239
6.3.1 Techniques for dΦ-DVS 240
6.3.2 Phase Unwrapping 240
6.3.3 Dual-Pulse DVS 241
6.3.4 Interferometric Phase Recovery dΦ-DVS 246
6.3.5 Heterodyne DVS (hDVS) 249
6.3.6 Homodyne DVS 254
6.4 Comparison and Performance of the DVS Techniques 256
6.5 Issues and Solutions 257
6.5.1 Fading 257
6.5.1.1 Requirements for statistically independent signals 257
6.5.1.2 The effect of diversity on signal quality 259
6.5.1.3 Specific arrangements for frequency diversity 260
6.5.1.4 Alternative approaches to diversity in DVS 261
6.5.2 Reflections 262
6.5.3 Dynamic Range of the Signal 262
6.5.4 Dynamic Range of the Measurand 263
6.5.5 Linearity in dΦ-DVS Systems 264
6.5.6 Optical Non-Linearity 266
6.6 Dynamic Measurements Converted to Strain 267
6.7 Static Measurements with Coherent Rayleigh Backscatter 267
6.7.1 Static vs. Dynamic Measurements 267
6.7.2 Coherent Rayleigh Backscatter in Static Measurements 267
6.7.2.1 Illustration of the coherent Rayleigh response to static measurements 267
6.7.2.2 Relationship between the backscatter power spectrum and the refractive index variations 271
6.7.3 Obtaining Location-Dependent Data from Frequency-Domain Rayleigh Backscatter 271
6.7.3.1 Frequency-domain-only interrogation 271
6.7.3.2 Combined time-/frequency-domain interrogation 272
6.7.4 Limitations in Frequency-Scanned Coherent Rayleigh Backscatter 272
6.7.5 Quasi Static Strain Measurements as a Vibration Sensor 273
6.8 Linearisation of the Dynamic Strain Measurement in Intensity Coherent OTDR 274
6.9 Summary 274
References 275

PART THREE Applications of Distributed Sensors 279

7 Applications of Distributed Temperature Sensors (DTSs) 281
7.1 Energy Cables: Dynamic Rating of Carrying Capacity 281
7.2 Transformers 282
7.3 Generators and Circuit Breakers 283
7.4 Fire Detection 283
7.5 Process Plant 284
7.6 Cryogenic Measurements 285
7.7 Pipelines: Leak Detection and Flow Assurance 286
7.8 Borehole Measurement (Geothermal, Oil and Gas) 288
7.8.1 Completion of Oil and Gas Wells 288
7.8.2 Deployment of Optical Fibres in Wells 290

7.8.3 Steam-Assisted Heavy Oil Production 294
7.8.4 Conventional Oil 295
7.8.5 Thermal Tracer Techniques 297
7.8.6 Injector Wells: Warm Back and Hot Slugs 297
7.8.7 Intervention Services 298
7.8.8 Geothermal Energy Extraction 299
7.8.9 CO_2 Sequestration 299
7.8.10 Gas Wells 299
7.8.11 Gas Lift Valves 300
7.8.12 Electric Submersible Pumps (ESP) 300
7.8.13 Well Integrity Monitoring 301
7.8.14 Hydrate Production 301
7.8.15 Subsea DTS Deployment 302
7.9 Cement and Concrete Curing 302
7.10 Hydrology 303
7.10.1 Dams and Dykes 303
7.10.2 Near-Surface Hydrology, Streams and Estuaries 304
7.11 Environment and Climate Studies 305
7.12 Building Efficiency Research 305
7.13 Nuclear 306
7.14 Mining 307
7.15 Conveyors 307
7.16 Measurements Inferred from Temperature 308
7.16.1 Thermal Measurement of Air Flow 308
7.16.2 Liquid-Level Measurement 309
7.16.3 Performance of Active Fibre Components 310
7.17 Summary 310
References 310

8 Distributed Strain Sensors: Practical Issues, Solutions and Applications 315
8.1 Separation of Temperature and Strain Effects 315
8.1.1 Separation through Cable Design 315
8.1.2 Hybrid Measurement 316
8.1.2.1 Spontaneous Brillouin intensity and frequency measurement 316
8.1.2.2 Raman/Brillouin hybrid approach 316
8.1.2.3 Coherent Rayleigh/Brillouin hybrid 317
8.1.2.4 Brillouin/fluorescence 317
8.1.3 Discrimination Based Solely on Features of the Brillouin Spectrum 317
8.1.3.1 Independent optical cores 317
8.1.3.2 Multiple Brillouin peaks with distinct properties 318
8.1.3.3 Polarisation-maintaining fibres and photonic crystal fibres 318
8.1.3.4 Few-mode fibres 318
8.1.3.5 Multi-wavelength interrogation 319
8.1.3.6 Direct measurement of the Brillouin beat spectrum 319
8.1.3.7 Fibres designed for Brillouin measurand discrimination 320
8.2 Inferring Other Measurands from Temperature or Strain 322
8.2.1 Pressure 322
8.2.2 Liquid Flow 322
8.2.3 Chemical Detection 323
8.3 Polymer Fibre Based Strain Measurement 324

8.4 Applications of Distributed Strain Measurements 325
8.4.1 Mechanical Coupling and Limitations on Strain Measurements 325
8.4.2 Energy Cables 326
8.4.3 Telecommunications 326
8.4.4 Civil Engineering 327
8.4.4.1 Tunnels 327
8.4.4.2 Crack detection 327
8.4.4.3 Damage in offshore structures 328
8.4.5 Nuclear 328
8.4.6 Shape Sensing 328
8.4.7 Composite Structural Health Monitoring 329
8.4.8 Casing Deformation 329
8.4.9 Pipeline Integrity Monitoring 329
8.4.10 Compaction and Subsidence in Subterranean Formations 330
8.4.11 Ground Movement and Geomechanics 330
8.4.12 River Banks and Levees 332
8.4.13 Security/Perimeter Fence 332
8.5 Summary 333
References 333

9 Applications of Distributed Vibration Sensors (DVSs) 339
9.1 Active Seismic Applications 340
9.1.1 Surface Seismic Acquisition 340
9.1.2 Borehole Seismic Surveying 341
9.1.2.1 Introduction to borehole seismic acquisition 341
9.1.2.2 Optical borehole seismic acquisition on wireline cable 343
9.1.2.3 Borehole seismic acquisition using permanently installed optical cables 345
9.1.3 Response of Distributed Vibration Sensors to Acoustic or Seismic Waves 346
9.1.3.1 Distance resolution in differential phase DVS systems 346
9.1.3.2 Nature of the measurement 347
9.1.3.3 Gauge length effects 348
9.1.3.4 Angular and directional response 353
9.1.3.5 Interaction of wavenumber filtering and angular response 354
9.1.3.6 Polarity of the seismic signal captured with DVS 356
9.1.3.7 Pulse duration 356
9.1.3.8 Sampling rates 358
9.1.3.9 Diversity in borehole seismic acquisition with DVS 358
9.1.4 Examples of Borehole Seismic DVS Data 359
9.1.5 Coupling in Borehole Seismic 361
9.1.6 DVS in Surface Seismic 363
9.2 Security – Perimeter, Pipeline Surveillance 364
9.3 Transportation 370
9.4 Energy Cables 371
9.4.1 Subsea Cables 371
9.4.2 Detection of Faults and Partial Discharge 372
9.4.3 Wind and Ice Loading in Overhead Cables 372
9.5 Production and Integrity Applications in Boreholes 373
9.5.1 Flow Monitoring 373
9.5.1.1 Total vibration energy 374
9.5.1.2 Spectral discrimination in DVS analysis 374

9.5.1.3 Tube wave velocity 376
9.5.1.4 Turbulent structure velocity 376
9.5.1.5 Ultra-low frequency 376
9.5.1.6 Sensor placement 377
9.5.1.7 Conveyance methods for DVS 377
9.5.1.8 Applications of DVS flow monitoring in boreholes 377
9.5.2 Hydrofracturing Monitoring Using Microseismic Events 378
9.5.3 Artificial Lift Monitoring 378
9.5.4 Perforation 380
9.5.5 Well Abandonment 381
9.6 Multimode Fibre in Distributed Vibration Sensing 381
9.7 Interpretation of DVS Data 382
References 382

10 Other Distributed Sensors 387
10.1 Loss-Based Sensors 387
10.1.1 Micro-Bending-Based Sensors 387
10.1.1.1 Safety barriers 389
10.1.1.2 Linear heat detection 389
10.1.1.3 Moisture/hydrocarbon sensing 390
10.1.2 Radiation Detection 390
10.1.3 Loss of Numerical Aperture 391
10.1.4 Rare-Earth-Doped Fibre Temperature Sensing 392
10.2 Fluorescence 394
10.3 Changes in Capture Fraction 394
10.4 Polarisation Optical Time-Domain Reflectometry (POTDR) 395
10.4.1 Basic Principles of POTDR 395
10.4.2 POTDR in High-Birefringence Fibres 396
10.4.3 Polarisation Optical Frequency-Domain Reflectometry 398
10.4.4 Dual-Wavelength Beat Length Measurements 398
10.4.5 Full Polarimetric Analysis of POTDR Signals 399
10.4.6 Alternative Approaches to Estimating the Distribution of the State of Polarisation 400
10.4.7 Applications of POTDR 400
10.4.7.1 Distributed pressure sensing 400
10.4.7.2 Current/magnetic fields 401
10.4.7.3 Polarisation mode dispersion 402
10.4.7.4 Vibration sensing 402
10.5 Blackbody Radiation 403
10.6 Forward-Scattering Methods 403
10.6.1 Mode Coupling in Dual-Mode Fibres 404
10.6.2 Modalmetric Sensors 405
10.6.3 Distributed Interferometers 406
10.7 Non-Linear Optical Methods 408
10.7.1 Stimulated Raman 409
10.7.2 The Kerr Effect in Distributed Temperature Sensing 409
10.7.3 The Kerr Effect for POTDR in High-Birefringence Fibres 410
10.7.4 Two-Photon Fluorescence 411
10.8 Closing Comments 413
References 413

11 Conclusions **419**
11.1 Selection Process 421
11.2 Choice of Distributed Sensors vs. Multiplexed Point Sensors 423
11.3 Trends in DOFS 424
