| About the Book..... | xvii |
| Preface..... | xix |
| Acknowledgments..... | xxi |
| Recommended Reading..... | xxiii |
| Nomenclature..... | xxvii |
| Authors..... | xxxix |
| 1 Introduction..... | 1 |
| 1.1 Process Development..... | 2 |
| 1.2 Basic Building Blocks of Chemical Reaction Engineering..... | 3 |
| 1.3 Outline of the Book..... | 4 |
| 1.4 Introduction to Chemical Reactions..... | 5 |
| 1.4.1 Rate of Reaction..... | 6 |
| 1.5 Classification and Types of Reactors..... | 7 |
| 1.5.1 Batch and Semibatch Operation..... | 7 |
| 1.5.1.1 Batch Reactor..... | 7 |
| 1.5.1.2 Semibatch Reactor..... | 8 |
| 1.5.2 Continuous Flow Reactors..... | 8 |
| 1.5.2.1 Perfectly Mixed Flow Reactor..... | 9 |
| 1.5.2.2 Plug Flow Reactor..... | 9 |
| 1.5.3 Classification by Number of Phases..... | 10 |
| 1.5.4 Catalytic Reactors..... | 10 |
| 1.6 Reactor Performance Measures..... | 11 |
| 1.6.1 Conversion..... | 11 |
| 1.6.2 Space Velocity..... | 12 |
| 1.6.3 Liquid Hourly Space Velocity..... | 12 |
| 1.6.4 Gas Hourly Space Velocity..... | 13 |
| 1.6.4.1 Space Time..... | 13 |
| 1.6.4.2 Residence Time..... | 13 |
| 1.7 Introduction to Rate Function..... | 13 |
| 1.8 Transport Phenomena in Reactors..... | 15 |
| 1.8.1 Material Balances..... | 15 |
| 1.8.2 Energy Balance..... | 16 |
| 1.8.3 Momentum Balances..... | 16 |
| 1.8.4 Coupling of Material, Energy, and Momentum Balances..... | 16 |
| 1.9 Numerical Methods..... | 17 |
| References..... | 17 |
| 2 Thermodynamics of Chemical Reactions..... | 19 |
| 2.1 Basic Definitions..... | 19 |
| 2.1.1 Open and Closed Systems..... | 19 |
| 2.1.2 Thermodynamic Standard State..... | 20 |
| 2.1.3 Equations of State..... | 20 |
| 2.1.3.1 Ideal Gas Law..... | 20 |

| | | | |
|----------|---------|---|-----------|
| | 2.1.3.2 | Nonideal Gas Behavior..... | 20 |
| | 2.1.4 | Multicomponent Mixtures..... | 21 |
| 2.2 | | Energy Changes in Systems | 23 |
| | 2.2.1 | Enthalpy | 23 |
| | 2.2.2 | Energy Change Resulting from Temperature Change: Heat Capacity | 23 |
| | 2.2.3 | Enthalpy Change with Pressure..... | 26 |
| | 2.2.4 | Energy Change owing to Composition Change: Heat of Reaction | 26 |
| | 2.2.4.1 | Computing the Enthalpy of Reaction at Other Temperatures..... | 28 |
| | 2.2.4.2 | Generalized Stoichiometric Coefficient | 32 |
| 2.3 | | Chemical Reaction Equilibrium..... | 33 |
| | 2.3.1 | Derivation of Equilibrium Constant | 34 |
| | 2.3.2 | Computing Standard Free Energy Change..... | 35 |
| | 2.3.3 | Temperature Dependence of Equilibrium Constant | 36 |
| | 2.3.4 | Computing Equilibrium Composition | 37 |
| | 2.3.4.1 | Liquid-Phase Reactions | 38 |
| | 2.3.4.2 | Gas-Phase Reactions | 39 |
| | 2.3.4.3 | Solid-Phase Reactions..... | 43 |
| | 2.3.5 | Equilibrium Compositions with Multiple Reactions..... | 44 |
| 2.4 | | Summary..... | 45 |
| | | Problems..... | 45 |
| | | References | 47 |
| 3 | | Mole Balances in Ideal Reactors | 49 |
| | 3.1 | General Mole Balance Equation..... | 49 |
| | 3.2 | Perfectly Mixed Batch Reactor | 50 |
| | 3.2.1 | Constant-Volume Batch Reactor..... | 51 |
| | 3.2.2 | Variable-Volume Batch Reactor..... | 52 |
| | 3.3 | Plug Flow Reactor | 57 |
| | 3.3.1 | Plug Flow Assumptions..... | 57 |
| | 3.3.2 | Plug Flow Mole Balance..... | 58 |
| | 3.3.3 | Space Time in Plug Flow Reactor | 59 |
| | 3.3.4 | Mean Residence Time in Plug Flow Reactor..... | 60 |
| | 3.4 | Continuous Stirred Tank Reactor | 64 |
| | 3.4.1 | Space Time and Mean Residence Time in CSTR..... | 66 |
| | 3.4.2 | Summary of Mole Balance Equations for Three Ideal Reactors | 69 |
| | 3.5 | Reaction Rate in Terms of Catalyst Mass..... | 69 |
| | 3.6 | Comparison of PFR and CSTR Performance..... | 76 |
| | 3.7 | Multiple Reactions | 78 |
| | 3.7.1 | Series Reactions..... | 78 |
| | 3.7.2 | Parallel Reactions..... | 78 |
| | 3.7.3 | Series-Parallel Reactions | 79 |
| | 3.8 | Multiple-Reactor Systems | 83 |
| | 3.8.1 | Plug Flow Reactors in Series | 83 |
| | 3.8.2 | Plug Flow Reactors in Parallel | 84 |
| | 3.8.3 | CSTR in Parallel | 85 |
| | 3.8.4 | CSTR in Series | 86 |
| | 3.8.4.1 | Minimum Total Reactor Volume for CSTR in Series..... | 87 |

| | | |
|----------|--|------------|
| 3.8.5 | CSTR–PFR in Series | 91 |
| 3.8.6 | Reactors with Side Streams | 94 |
| 3.9 | Further Thoughts on Defining Conversion..... | 96 |
| 3.10 | Transient Reactor Operation..... | 98 |
| 3.10.1 | Transient Plug Flow Reactor..... | 98 |
| 3.10.2 | Single Transient CSTR..... | 98 |
| 3.10.2.1 | Transient CSTR with Constant Volume | 99 |
| 3.10.2.2 | Transient CSTR with Variable Volume: Semibatch Operation | 101 |
| 3.10.3 | Transient CSTR in Series: Constant Volume | 102 |
| 3.11 | Summary | 112 |
| | Problems..... | 113 |
| 4 | Energy Balances in Ideal Reactors | 119 |
| 4.1 | Influence of Temperature on Reactor Operation | 119 |
| 4.1.1 | Temperature Dependence of Reaction Rate Constants | 119 |
| 4.1.2 | Effect of Temperature on Equilibrium Conversion..... | 120 |
| 4.1.3 | Energy Balance for Ideal Reactors | 120 |
| 4.2 | General Energy Balance | 120 |
| 4.3 | Batch Reactor | 122 |
| 4.3.1 | Constant-Volume Batch Reactor..... | 123 |
| 4.3.2 | Relationship between ΔU_R and ΔH_R | 125 |
| 4.3.2.1 | Assuming a Constant Value for Heat Capacity | 128 |
| 4.3.3 | External Heat Transfer in CVBR..... | 129 |
| 4.3.4 | Adiabatic Temperature Change for CVBR..... | 129 |
| 4.3.5 | Energy Balance for CVBR Containing a Catalyst | 134 |
| 4.3.6 | Multiple Reactions in a Batch Reactor | 135 |
| 4.3.7 | Variable-Volume Batch Reactor..... | 136 |
| 4.4 | Plug Flow Reactor | 147 |
| 4.4.1 | Basic Energy Balance Equation..... | 148 |
| 4.4.1.1 | Use of Average Heat Capacity | 150 |
| 4.4.2 | Temperature and Concentration Profiles as Function of Reactor Length..... | 151 |
| 4.4.3 | Adiabatic Operation of PFR: Adiabatic Reaction Line | 151 |
| 4.4.4 | External Heat Transfer to PFR | 155 |
| 4.4.5 | Multiple Reactions in PFR | 164 |
| 4.4.6 | Parametric Sensitivity of PFR | 171 |
| 4.4.7 | Equilibrium Effects in PFR..... | 174 |
| 4.4.7.1 | Equilibrium Effects in Endothermic Reactions | 175 |
| 4.4.7.2 | Equilibrium Effects in Exothermic Reactions..... | 175 |
| 4.4.7.3 | Multibed Adiabatic Reactors for Equilibrium Limited Reactions..... | 177 |
| 4.5 | Continuous Stirred Tank Reactor | 178 |
| 4.5.1 | Steady-State CSTR: Basic Energy Balance | 179 |
| 4.5.2 | Adiabatic Operation of CSTR: Adiabatic Reaction Line | 182 |
| 4.5.3 | External Heat Exchange in CSTR | 182 |
| 4.5.4 | Multiple Reactions in CSTR..... | 186 |
| 4.5.5 | Multiple Steady States in a CSTR..... | 187 |

| | | |
|----------|---|------------|
| 4.5.6 | Transient CSTR with Energy Effects: Constant-Volume Case..... | 195 |
| 4.5.7 | Semibatch Operation..... | 199 |
| 4.6 | Summary..... | 208 |
| | Problems..... | 208 |
| | References..... | 213 |
| 5 | Chemical Kinetics for Homogeneous Reactions..... | 215 |
| 5.1 | General Nature of Rate Functions..... | 215 |
| 5.2 | Reaction Mechanism..... | 217 |
| 5.2.1 | Rate Expressions for Elementary Reactions..... | 217 |
| 5.2.2 | Rate Expressions for Nonelementary Reactions..... | 219 |
| 5.3 | Theoretical Analysis of Reaction Rate..... | 219 |
| 5.3.1 | Collision Theory..... | 219 |
| 5.3.2 | Absolute Reaction Rate Theory..... | 221 |
| 5.3.3 | Temperature Dependence of Rate Constant..... | 222 |
| 5.4 | Rate Equations for Nonelementary Reactions..... | 223 |
| 5.4.1 | Unimolecular Reactions..... | 224 |
| 5.4.1.1 | Lindeman Mechanism..... | 224 |
| 5.4.1.2 | Steady-State Hypothesis for Lindeman Mechanism..... | 225 |
| 5.4.2 | Rice–Herzfeld Mechanisms..... | 226 |
| 5.4.3 | Complex Gas-Phase Reactions..... | 230 |
| 5.4.4 | Rate-Determining Step Method for Deriving Rate Expressions..... | 232 |
| 5.5 | Mechanisms and Models..... | 235 |
| 5.6 | Experimental Methods in Rate Data Collection and Analysis..... | 236 |
| 5.6.1 | Rate Data in Constant-Volume Batch Reactor..... | 237 |
| 5.6.2 | Differential Method of Analysis of CVBR Data..... | 237 |
| 5.6.2.1 | Finite Difference Formulae..... | 238 |
| 5.6.2.2 | Fitting a Curve to the Data..... | 239 |
| 5.6.3 | Determining Form of Rate Expression..... | 239 |
| 5.6.3.1 | Power Law Models..... | 239 |
| 5.6.3.2 | Complex Rate Expressions..... | 243 |
| 5.6.4 | Integral Method of Analysis of CVBR Data..... | 247 |
| 5.6.4.1 | Power Law Kinetics..... | 247 |
| 5.6.4.2 | Complex Kinetics..... | 249 |
| 5.6.5 | Temperature Dependence of Rate Constants..... | 252 |
| 5.6.6 | Methods of Isolation and Excess..... | 252 |
| 5.6.6.1 | Method of Isolation..... | 253 |
| 5.6.6.2 | Method of Excess..... | 253 |
| 5.6.7 | Using a CSTR to Collect Rate Data..... | 255 |
| 5.6.8 | Using PFR to Collect Rate Data..... | 255 |
| 5.7 | Summary..... | 255 |
| | Problems..... | 256 |
| 6 | Nonideal Reactor Analysis..... | 261 |
| 6.1 | Causes of Nonideal Reactor Behavior..... | 261 |
| 6.1.1 | Nonideal Behavior in CSTR..... | 262 |
| 6.1.2 | Deviations from Plug Flow Performance..... | 262 |
| 6.1.3 | Deviations from Perfect Mixing in Batch and Fed Batch Reactors..... | 263 |
| 6.2 | Residence Time and Mixing..... | 263 |

| | | |
|----------|---|------------|
| 6.3 | RTD Function..... | 263 |
| 6.3.1 | Measurement of RTD | 264 |
| 6.3.2 | RTD Function | 264 |
| 6.3.3 | Cumulative Distribution and Washout Functions..... | 265 |
| 6.3.4 | Determination of $f(t)$ from Pulse Input..... | 265 |
| 6.3.5 | Determination of $f(t)$ from Step Change..... | 267 |
| 6.3.6 | Means and Moments | 267 |
| 6.3.7 | Normalized RTD Functions | 269 |
| 6.4 | RTD in Ideal Reactors..... | 273 |
| 6.4.1 | RTD in Perfectly Mixed CSTR..... | 274 |
| 6.4.2 | RTD in Plug Flow System | 275 |
| 6.5 | Modeling RTD | 276 |
| 6.5.1 | Multiple Vessel Models | 276 |
| 6.5.1.1 | Parallel Plug Flow Reactors | 277 |
| 6.5.1.2 | Fractional Tubularity Model..... | 277 |
| 6.5.1.3 | Tanks-in-Series Model..... | 279 |
| 6.5.1.4 | Extensions of Tanks in Series: Gamma Function and Fractional Tanks | 283 |
| 6.5.1.5 | Backflow, Crossflow, and Side Capacity Models | 286 |
| 6.5.2 | Theoretical Model for Laminar Flow Tubular Reactor | 287 |
| 6.5.3 | Dispersion Model for Tubular Reactors..... | 290 |
| 6.5.4 | Convection–Diffusion Equation for Tubular Reactors | 295 |
| 6.5.4.1 | Taylor–Aris Dispersion..... | 297 |
| 6.5.5 | Summary of RTD | 297 |
| 6.6 | Mixing in Chemical Reactors..... | 297 |
| 6.6.1 | Laminar and Turbulent Mixing..... | 299 |
| 6.6.2 | Mixing Process: Micromixing and Macromixing..... | 299 |
| 6.6.2.1 | Macromixing and Macrofluids | 299 |
| 6.6.2.2 | Micromixing and Microfluids | 300 |
| 6.6.2.3 | Mixing and RTD..... | 300 |
| 6.6.3 | Segregated Tank Reactor | 300 |
| 6.6.3.1 | Conversion in Segregated Tank Reactor | 301 |
| 6.6.4 | General Segregated Flow Model | 303 |
| 6.6.5 | Maximum Mixedness Model..... | 304 |
| 6.6.6 | Bounding Mixing Regions | 306 |
| 6.7 | Summary..... | 308 |
| | Problems..... | 309 |
| | References | 312 |
| 7 | Introduction to Catalysis..... | 313 |
| 7.1 | Origins of Catalysis: Historical Perspectives | 313 |
| 7.2 | Definitions and Fundamental Concepts..... | 315 |
| 7.2.1 | Classification by Number of Phases..... | 315 |
| 7.2.2 | Catalyst Activity and Active Sites | 315 |
| 7.2.3 | Adsorption..... | 316 |
| 7.2.4 | Selectivity and Functionality | 316 |
| 7.3 | Thermodynamics | 316 |
| 7.4 | Catalyst Types and Basic Structure | 317 |
| 7.4.1 | Basic Catalyst Structure | 317 |

| | | |
|----------|--|------------|
| 7.4.2 | Supported Catalysts | 319 |
| 7.4.3 | Metal Catalysts | 319 |
| 7.4.4 | Deactivation | 320 |
| 7.5 | Classification of Vapor-Phase Reactions | 320 |
| 7.5.1 | Acid-Catalyzed Reactions | 321 |
| 7.5.1.1 | Catalytic Cracking | 321 |
| 7.5.1.2 | Alkylation | 321 |
| 7.5.1.3 | Isomerization | 322 |
| 7.5.1.4 | Polymerization | 322 |
| 7.5.1.5 | Hydrogen Transfer | 322 |
| 7.5.2 | Hydrogenation–Dehydrogenation | 322 |
| 7.5.2.1 | Carbon Bond Saturation or Reverse | 322 |
| 7.5.2.2 | Hydrogenation of Aromatics and Aromatization | 322 |
| 7.5.2.3 | Dehydrogenation of Oxyorganic Compounds without Water Removal | 322 |
| 7.5.2.4 | Hydrogenolysis of Carbon–Oxygen or Nitrogen– Oxygen Bonds | 323 |
| 7.5.2.5 | Hydrogenolysis of Oxides of Carbon | 323 |
| 7.5.2.6 | Hydrodesulfurization | 323 |
| 7.5.2.7 | Ammonia Synthesis | 323 |
| 7.5.3 | Oxidation | 323 |
| 7.5.3.1 | Oxygen Addition Reactions | 324 |
| 7.5.3.2 | Oxygenolysis | 324 |
| 7.5.4 | Hydration and Dehydration | 324 |
| 7.5.5 | Dehydration–Dehydrogenation | 324 |
| 7.5.6 | Isotope Exchange | 325 |
| 7.5.7 | Miscellaneous | 325 |
| 7.6 | Basic Steps in Heterogeneous Catalytic Reactions | 325 |
| 7.7 | Introduction to Catalytic Reactors | 326 |
| 7.7.1 | Fixed Bed Reactor | 327 |
| 7.7.2 | Fluidized Bed Reactor | 327 |
| 7.7.3 | Reactors for Liquids and Gas/Liquid Mixtures | 328 |
| 7.7.3.1 | Trickle Bed Reactor | 328 |
| 7.7.3.2 | Slurry Reactor | 328 |
| 7.8 | Summary | 329 |
| 8 | Kinetics of Catalytic Reactions | 331 |
| 8.1 | Adsorption | 331 |
| 8.1.1 | Physical Adsorption | 331 |
| 8.1.2 | Chemisorption | 331 |
| 8.1.3 | Differentiating Chemical and Physical Adsorption | 332 |
| 8.1.4 | Energetics of Adsorption | 333 |
| 8.1.4.1 | Activated Chemisorption | 334 |
| 8.1.4.2 | Nonactivated Chemisorption | 335 |
| 8.1.4.3 | Endothermic Adsorption | 336 |
| 8.1.4.4 | Dual Site Adsorption | 336 |
| 8.1.5 | Equilibrium Adsorption | 337 |
| 8.1.5.1 | Adsorption Isotherms | 338 |
| 8.1.5.2 | Models for Adsorption Isotherms | 338 |

| | | | |
|----------|---------|--|------------|
| | 8.1.5.3 | Adsorption Isobars | 339 |
| | 8.1.5.4 | Adsorption Isoterms..... | 340 |
| 8.1.6 | | Heat of Adsorption..... | 340 |
| 8.1.7 | | Langmuir Adsorption Model: Detailed Consideration..... | 342 |
| | 8.1.7.1 | The Langmuir Model: Single-Component Systems | 342 |
| | 8.1.7.2 | Langmuir Model: Dissociative Chemisorption | 344 |
| | 8.1.7.3 | Langmuir Model: Multicomponent Systems, Single Site Type..... | 345 |
| 8.1.8 | | Models Accounting for Variable Heat of Adsorption..... | 346 |
| 8.2 | | Rate Expressions for Catalytic Reactions..... | 348 |
| | 8.2.1 | Langmuir–Hinshelwood–Hougen–Watson Rate Equations | 348 |
| | 8.2.1.1 | General Form of LHHW Reaction Models | 360 |
| | 8.2.2 | Models for Oxidation Reactions | 364 |
| 8.3 | | Mechanisms and Models..... | 366 |
| 8.4 | | Summary..... | 367 |
| | | Problems..... | 367 |
| | | Reference..... | 370 |
| 9 | | Transport Processes in Catalysis..... | 371 |
| 9.1 | | Diffusion in Bulk Phase | 371 |
| | 9.1.1 | Basics of Bulk Diffusion: Diffusion Coefficient..... | 371 |
| | 9.1.2 | Calculating Molecular Diffusion Coefficients in Binary Systems | 373 |
| | 9.1.3 | Total Molar Diffusive Flux in Binary System | 374 |
| | 9.1.4 | Diffusion in Multicomponent Mixtures: Generalized Fick's Law | 374 |
| | 9.1.5 | Multicomponent Diffusion in Dilute Mixtures | 375 |
| 9.2 | | External Mass and Heat Transfer Effects | 376 |
| | 9.2.1 | Mass and Heat Transfer Coefficients | 376 |
| | 9.2.2 | Effect of External Mass Transfer on Observed Reaction Rate..... | 379 |
| | 9.2.3 | Combined Heat and Mass Transfer | 382 |
| | 9.2.4 | Effect of External Transport on Selectivity | 383 |
| | 9.2.4.1 | Isothermal Series Reaction..... | 383 |
| | 9.2.4.2 | Parallel Isothermal Reactions..... | 385 |
| | 9.2.4.3 | Nonisothermal Reactions..... | 385 |
| 9.3 | | Diffusion in Porous Catalysts..... | 386 |
| | 9.3.1 | Diffusion in Catalyst Pores..... | 386 |
| | 9.3.2 | Effective Diffusivity | 387 |
| | 9.3.3 | Parallel Pore Model..... | 388 |
| | 9.3.4 | Random Pore Model..... | 389 |
| 9.4 | | Diffusion with Reaction in Porous Catalysts | 391 |
| | 9.4.1 | Effectiveness Factor | 391 |
| | 9.4.2 | Effectiveness Factor for Isothermal Flat Plate..... | 392 |
| | 9.4.2.1 | Thiele Modulus for First-Order Reaction | 395 |
| | 9.4.2.2 | Effectiveness Factor for First-Order Reaction in Flat Plate | 396 |
| | 9.4.2.3 | Asymptotic Solutions for Effectiveness Factor | 398 |
| | 9.4.3 | Effectiveness Factor for Isothermal Spherical Catalyst Pellet | 399 |
| | 9.4.4 | Effectiveness Factor for Isothermal Cylindrical Catalyst Pellet..... | 401 |
| | 9.4.5 | Generalized Thiele Modulus and Effectiveness Factors..... | 401 |
| | 9.4.6 | Effectiveness Factors for Non-First-Order Reactions | 403 |

| | | |
|-----------|---|------------|
| 9.4.7 | Nonisothermal Effectiveness Factors..... | 405 |
| 9.4.7.1 | Solving Coupled Mole and Energy Balance Equations | 407 |
| 9.4.7.2 | Solution Algorithm Using Only Initial Value Problems..... | 409 |
| 9.4.8 | Effect of Internal Diffusion Limitation on Observed Kinetics..... | 410 |
| 9.4.9 | Combined Internal and External Mass Transfer Resistance | 411 |
| 9.5 | Summary | 416 |
| | Problems..... | 416 |
| | References | 420 |
| 10 | Analysis of Catalytic Reactors | 421 |
| 10.1 | Packed-Bed Reactor: Introduction and Overview..... | 421 |
| 10.2 | Conservation Equations for Packed Beds..... | 422 |
| 10.2.1 | Momentum Balance in Packed Beds..... | 422 |
| 10.2.1.1 | Velocities in Packed Beds | 422 |
| 10.2.1.2 | One-Dimensional Flow | 423 |
| 10.2.1.3 | Ergun Equation..... | 424 |
| 10.2.1.4 | Deriving the Ergun Equation | 425 |
| 10.2.1.5 | Continuity Equation | 428 |
| 10.2.2 | Mole and Energy Balances in Packed Beds..... | 431 |
| 10.3 | One-Dimensional Steady-State Plug Flow Models | 432 |
| 10.3.1 | Pseudo-Homogeneous Model for an Adiabatic-Packed Bed..... | 432 |
| 10.3.1.1 | Steady-State Mole Balance Equation..... | 433 |
| 10.3.1.2 | Steady-State Energy Balance Equation..... | 435 |
| 10.3.2 | Heterogeneous Model for an Adiabatic-Packed Bed..... | 435 |
| 10.3.2.1 | Steady-State Mole Balance Equation for the Fluid | 436 |
| 10.3.2.2 | Steady-State Mole Balance Equation for the Solid Catalyst..... | 437 |
| 10.3.2.3 | Steady-State Energy Balance Equation for the Fluid..... | 437 |
| 10.3.2.4 | Steady-State Energy Balance Equation for the Solid Catalyst..... | 438 |
| 10.3.3 | Pseudo-Homogeneous Model for a Nonadiabatic-Packed Bed | 439 |
| 10.3.4 | Heterogeneous Model for a Nonadiabatic-Packed Bed..... | 441 |
| 10.3.4.1 | Heat Transfer Coefficient for Nonadiabatic Reactors..... | 441 |
| 10.4 | One-Dimensional Steady-State Axial Dispersion Models | 442 |
| 10.4.1 | Pseudo-Homogeneous Axial Dispersion Model | 443 |
| 10.4.1.1 | Mole Balance Equation | 443 |
| 10.4.1.2 | Energy Balance Equation | 443 |
| 10.4.1.3 | Boundary Conditions for the 1D Axial Dispersion Model ... | 444 |
| 10.4.2 | Heterogeneous Axial Dispersion Model | 444 |
| 10.4.2.1 | Mole Balance Equations | 444 |
| 10.4.2.2 | Energy Balance Equation in the Fluid Phase | 444 |
| 10.4.2.3 | Energy Balance Equation for the Solid Phase | 445 |
| 10.4.2.4 | Boundary Conditions | 445 |
| 10.5 | Two-Dimensional Steady-State Models | 446 |
| 10.5.1 | Pseudo-Homogeneous 2D Model..... | 446 |
| 10.5.1.1 | Fluid Transport Mechanisms Are Dispersion Only Mole Balance Equation | 446 |
| 10.5.1.2 | Energy Balance Equation | 447 |
| 10.5.1.3 | Boundary Conditions | 447 |
| 10.5.2 | Heterogeneous 2D Model | 448 |

| | | |
|-----------|--|------------|
| 10.5.2.1 | Mole Balance Equation for the Fluid | 448 |
| 10.5.2.2 | Mole Balance Equation for the Solid | 449 |
| 10.5.2.3 | Energy Balance Equation for the Fluid | 449 |
| 10.5.2.4 | Energy Balance Equation for the Solid | 449 |
| 10.5.2.5 | Boundary Conditions | 449 |
| 10.6 | Transient Packed-Bed Models | 451 |
| 10.6.1 | One-Dimensional Reactor: Pseudo-Homogeneous Case | 451 |
| 10.6.2 | One-Dimensional Reactor: Heterogeneous Case | 452 |
| 10.6.3 | Two-Dimensional Reactor: Pseudo-Homogeneous Case | 452 |
| 10.6.4 | Two-Dimensional Reactor: Heterogeneous Case | 453 |
| 10.7 | Transport Properties in Packed Beds | 454 |
