Introduction 1

Part I: Fundamental Issues 5

1 Worldviews 7

Aristotle's Beliefs and the Aristotelian Worldview 7

Aristotle's beliefs 8

The Aristotelian worldview 12

The Newtonian Worldview 12

Concluding Remarks 13

Evidence 13

Common sense 14

2 Truth 17

Preliminary Issues 17

Clarifying the Question 18

Correspondence Theories of Truth 19

Coherence Theories of Truth 20

Different versions of coherence theories 20

Problems/Puzzles about Correspondence Theories of Truth 22

Assessing the accuracy of representations 23

The *Total Recall* scenario 24

A word of caution 26

Problems/Puzzles for Coherence Theories of Truth 26

Philosophical Reflections: Descartes and the *Cogito* 28

Concluding Remarks 29

3 Empirical Facts and Philosophical/Conceptual Facts 31

Preliminary Observations 31

A Note on Terminology 34

Concluding Remarks 34

- 4 Confirming and Disconfirming Evidence and Reasoning 36**
 Confirmation Reasoning 36
 Disconfirmation Reasoning 37
 Inductive and Deductive Reasoning 37
 Concluding Remarks 42
- 5 The Quine–Duhem Thesis and Implications for Scientific Method 43**
 The Quine–Duhem Thesis 43
 Bodies of beliefs and the tribunal of experience 44
 Crucial experiments 45
 The underdetermination of theories 46
 Implications for Scientific Method 47
 Aristotle’s axiomatic approach 48
 Descartes’ axiomatic approach 51
 Popper’s falsificationism 51
 The hypothetico-deductive method 52
 Concluding Remarks 53
- 6 A Philosophical Interlude: Problems and Puzzles of Induction 54**
 Hume’s Problem of Induction 54
 Hempel’s Raven Paradox 57
 Goodman’s Gruesome Problem 59
 Concluding Remarks 60
- 7 Falsifiability 61**
 Basic Ideas 61
 Complicating Factors 62
 Concluding Remarks 64
- 8 Instrumentalism and Realism 66**
 Prediction and Explanation 66
 Instrumentalism and Realism 67
 Concluding Remarks 70
- Part II: The Transition from the Aristotelian Worldview to the Newtonian Worldview 73**
- 9 The Structure of the Universe on the Aristotelian Worldview 75**
 The Physical Structure of the Universe 75
 Conceptual Beliefs about the Universe 77
 Concluding Remarks 80
- 10 The Preface to Ptolemy’s *Almagest*: The Earth as Spherical, Stationary, and at the Center of the Universe 81**
 The Earth as Spherical 82
 The Earth as Stationary 84

	Common-sense arguments	84
	The argument from objects in motion	86
	The argument from stellar parallax	88
	The Earth as the Center of the Universe	90
	Concluding Remarks	91
11	Astronomical Data: The Empirical Facts	92
	The Movement of the Stars	93
	The Movement of the Sun	94
	The Movement of the Moon	95
	The Movement of the Planets	95
	Concluding Remarks	98
12	Astronomical Data: The Philosophical/Conceptual Facts	99
	A Scientific Problem with the Motion of the Heavenly Bodies	99
	Three cautionary notes	102
	Could This Account Be Used for a Moving Earth?	103
	Concluding Remarks	104
13	The Ptolemaic System	106
	Background Information	106
	A Brief Description of the Components of Ptolemy's Treatment of Mars	107
	The Rationale behind These Components	108
	Concluding Remarks	114
14	The Copernican System	115
	Background Information	115
	Overview of the Copernican System	116
	Comparison of the Ptolemaic and Copernican Systems	117
	Respecting the facts	117
	Complexity	118
	Retrograde motion and other more "natural" explanations	118
	From a realist standpoint, which system is the more plausible model of the universe?	120
	What Motivated Copernicus?	121
	Neoplatonism	121
	Copernicus' commitment to uniform, circular movement	122
	The Reception of the Copernican Theory	123
	Concluding Remarks	124
15	The Tychonic System	125
16	Kepler's System	128
	Background Information	128
	Tycho Brahe's empirical observations	128
	Tycho and Kepler	129
	Kepler's System	130

	What Motivated Kepler? 131
	Kepler's desire to read the mind of God 132
	Concluding Remarks 136
17	Galileo and the Evidence from the Telescope 138
	Background Information 138
	Galileo and the Catholic church 138
	A note on the nature of the evidence from the telescope 139
	Galileo's Evidence from the Telescope 141
	Mountains on the moon 141
	Sunspots 142
	The rings, or "ears," of Saturn 142
	The moons of Jupiter 143
	The phases of Venus 144
	The stars 148
	The Reception of Galileo's Discoveries 148
	Falsifiability issues 149
	Concluding Remarks 152
18	A Summary of Problems Facing the Aristotelian Worldview 154
	Problems for the Aristotelian Worldview 154
	The Need for a New Science 157
	Concluding Remarks 157
	A word of caution 158
19	Philosophical and Conceptual Connections in the Development of the New Science 159
	The Size of the Universe 159
	Concluding Remarks 162
20	Overview of the New Science and the Newtonian Worldview 164
	The New Science 164
	The three laws of motion 165
	Universal gravitation 165
	Overview of the Newtonian Worldview 166
	Philosophical Reflections: Instrumentalist and Realist Attitudes
	Toward Newton's Concept of Gravity 168
	Concluding Remarks 170
21	Philosophical Interlude: What Is a Scientific Law? 171
	Scientific Laws 171
	Common features associated with scientific laws 172
	Exceptionless regularities 174
	Counterfactuals 174
	Context dependence 176
	<i>Ceteris paribus</i> clauses 177
	Concluding Remarks 178

- 22 The Development of the Newtonian Worldview, 1700–1900** 179
- Remarks on the Development of the Major Branches of Science, 1700–1900 179
 - Chemistry 180
 - Biology 181
 - Electromagnetic theory 182
 - General comments 184
 - Minor Clouds 184
 - The Michelson–Morley experiment 184
 - Black body radiation 187
 - Other issues 188
 - Concluding Remarks 190
- Part III: Recent Developments In Science and Worldviews** 191
- 23 The Special Theory of Relativity** 193
- Absolute Space and Absolute Time 193
 - Overview of the Special Theory of Relativity 195
 - The Irresistible Why Question 201
 - Is Special Relativity Self-Contradictory? 201
 - What about their disagreements on what the other clocks read? 204
 - From Joe’s point of view 205
 - From Sara’s point of view 205
 - Spacetime, Invariants, and the Geometrical Approach to Relativity 206
 - Concluding Remarks 210
- 24 The General Theory of Relativity** 211
- Basic Principles 211
 - The Einstein Field Equations and Predictions of General Relativity 213
 - Philosophical Reflections: General Relativity and Gravity 217
 - Concluding Remarks 218
- 25 Philosophical Interlude: Are (Some) Scientific Theories Incommensurable?** 219
- Preliminary Considerations 219
 - Exploring Incommensurability 221
 - Terminological incommensurability 222
 - Methodological incommensurability 224
 - Different worlds incommensurability 226
 - Discussion: Incommensurability and Scientific Progress 227
 - Concluding Remarks 229

26 Introduction to Quantum Theory: Basic Empirical Facts and the Mathematics of Quantum Theory	230
Facts, Theory, and Interpretation	230
The quantum facts	231
Quantum theory itself	231
Interpretations of quantum theory	232
Some Quantum Facts	232
A brief excursion into a reality issue	233
Four experiments	235
Overview of the Mathematics of Quantum Theory	239
Descriptive overview of the mathematics of quantum theory	239
If the mathematics of quantum theory is a familiar sort of wave mathematics, why do we often hear that quantum theory is such an unusual theory?	240
A somewhat more detailed, but still descriptive, overview of the mathematics of quantum theory	242
The evolution of states over time	247
Concluding Remarks	247
27 The Reality Question: The Measurement Problem and Interpretations of Quantum Theory	248
The Measurement Problem	248
What is a measurement?	248
The role of measurement in Newtonian science	250
The role of measurement in quantum theory	250
Schrödinger's cat	253
The Measurement Problem	255
Subjectivity vs. objectivity	255
Measurement contexts vs. nonmeasurement contexts	256
System vs. apparatus; macroscopic vs. microscopic levels	256
Universality	257
Concluding thoughts on the measurement problem	258
Interpretations of Quantum Theory	258
Collapse interpretations	259
Mild measurement-dependent reality	261
Moderate measurement-dependent reality	262
Radical measurement-dependent reality (consciousness-dependent reality)	262
Non-collapse interpretations	263
Einstein's realism	263
Bohm's realism	265
The many-worlds interpretation	267
Observations on the interpretations of quantum theory	268
Concluding Remarks	271

28 Quantum Theory and Locality: EPR, Bell's Theorem, and the Aspect Experiments	272
Background Information	272
The EPR Thought Experiment	273
The argument for (1)	275
Bell's Theorem	276
Aspect's Experiments	280
Locality, Nonlocality, and Spooky Action at a Distance	281
Concluding Remarks	285
29 Overview of the Theory of Evolution	286
Overview of the Basics of Evolutionary Theory	286
Darwin's and Wallace's discovery: Evolution by natural selection	286
A brief overview of evolutionary theory since Darwin and Wallace	288
A word of caution	292
Darwin's and Wallace's Paths to Natural Selection	293
The development of Darwin's views	293
The development of Wallace's views	296
Darwin's <i>On the Origin of Species</i>	297
The reception of the <i>Origin of Species</i>	299
Concluding Remarks	299
30 Reflections on Evolution	300
Implications for Religion	300
Dennett, Dawkins, Weinberg, and others: "no"	301
Haught, process philosophy, and process theology	302
Discussion	305
Morality and Ethics	307
Empirical Studies	310
The iterated prisoner's dilemma	310
The ultimatum game	313
Additional notes on cooperation and altruism	315
The trust game	316
Concluding Remarks	318
31 Worldviews: Concluding Thoughts	320
Overview	320
Reflections on Relativity Theory	322
Reflections on Quantum Theory	324
Reflections on Evolutionary Theory	325
Metaphors	326
Chapter Notes and Suggested Reading	329
References	349
Index	357
