

An extensive introduction to all the mathematical tools an economist needs is provided in this worldwide bestseller.

'The scope of the book is to be applauded.'

Dr Michael Reynolds, University of Bradford

'Excellent book on calculus with economic applications.'

Mauro Bambi, University of York

New to this edition:

- The introductory chapters have been restructured more logically to fit with teaching.
- Several new exercises have been introduced, as well as fuller solutions to existing ones.
- More coverage of the history of mathematical and economic ideas has been added, as well as of the scientists who developed them.
- New example based on the 2014 UK reform of housing taxation illustrates how a discontinuous function can have significant economic consequences.
- The associated material in **MyMathLab** has been expanded and improved.
- New Student's Manual with worked solutions to problems.

MyMathLab

Join over 10 million students benefiting from Pearson MyLabs

This title can be supported by **MyMathLab**, an online homework and tutorial system designed to test and build your understanding. MyMathLab provides a personalised approach, with instant feedback and numerous additional resources to support your learning.

- A personalised study plan
- Usable either following chapter-by-chapter structure or by learning objective
- Worked solutions show you how to solve difficult problems
- Limitless opportunities to practise

Use the power of MyMathLab to accelerate your learning. You need both an access card and a course ID to access MyMathLab:

1. Is your lecturer using MyMathLab? **Ask your lecturer** for your course ID
2. Has an access card been included with the book? **Check the inside back cover of the book**
3. If you have a course ID but no access card, go to: <http://www.mymathlab.com> to buy access to this interactive study programme

Knut Sydsæter was Emeritus Professor of Mathematics in the Economics Department at the University of Oslo, where he had taught mathematics for economists for over 45 years.

Peter Hammond is currently a Professor of Economics at the University of Warwick, where he moved in 2007 after becoming an Emeritus Professor at Stanford University. He has taught mathematics for economists at both universities, as well as at the Universities of Oxford and Essex.

Arne Strøm is Associate Professor Emeritus at the University of Oslo and has extensive experience in teaching mathematics for economists in the Department of Economics there.

Andrés Carvajal is an Associate Professor in the Department of Economics at University of California, Davis.

Preface	xi	3 Solving Equations	67
Publisher's Acknowledgement	xvii	3.1 Solving Equations	67
1 Essentials of Logic and Set Theory	1	3.2 Equations and Their Parameters	70
1.1 Essentials of Set Theory	1	3.3 Quadratic Equations	73
1.2 Some Aspects of Logic	7	3.4 Nonlinear Equations	78
1.3 Mathematical Proofs	12	3.5 Using Implication Arrows	80
1.4 Mathematical Induction	14	3.6 Two Linear Equations in Two Unknowns	82
Review Exercises	16	Review Exercises	86
2 Algebra	19	4 Functions of One Variable	89
2.1 The Real Numbers	19	4.1 Introduction	89
2.2 Integer Powers	22	4.2 Basic Definitions	90
2.3 Rules of Algebra	28	4.3 Graphs of Functions	96
2.4 Fractions	33	4.4 Linear Functions	99
2.5 Fractional Powers	38	4.5 Linear Models	106
2.6 Inequalities	43	4.6 Quadratic Functions	109
2.7 Intervals and Absolute Values	49	4.7 Polynomials	116
2.8 Summation	52	4.8 Power Functions	123
2.9 Rules for Sums	56	4.9 Exponential Functions	126
2.10 Newton's Binomial Formula	59	4.10 Logarithmic Functions	131
2.11 Double Sums	61	Review Exercises	136
Review Exercises	62	5 Properties of Functions	141
		5.1 Shifting Graphs	141
		5.2 New Functions from Old	146

5.3	Inverse Functions	150	8.6	Local Extreme Points	305
5.4	Graphs of Equations	156	8.7	Inflection Points, Concavity, and Convexity	311
5.5	Distance in the Plane	160		Review Exercises	316
5.6	General Functions	163			
	Review Exercises	166			
6	Differentiation	169	9	Integration	319
6.1	Slopes of Curves	169	9.1	Indefinite Integrals	319
6.2	Tangents and Derivatives	171	9.2	Area and Definite Integrals	325
6.3	Increasing and Decreasing Functions	176	9.3	Properties of Definite Integrals	332
6.4	Rates of Change	179	9.4	Economic Applications	336
6.5	A Dash of Limits	182	9.5	Integration by Parts	343
6.6	Simple Rules for Differentiation	188	9.6	Integration by Substitution	347
6.7	Sums, Products, and Quotients	192	9.7	Infinite Intervals of Integration	352
6.8	The Chain Rule	198	9.8	A Glimpse at Differential Equations	359
6.9	Higher-Order Derivatives	203	9.9	Separable and Linear Differential Equations	365
6.10	Exponential Functions	208		Review Exercises	371
6.11	Logarithmic Functions	212			
	Review Exercises	218	10	Topics in Financial Mathematics	375
7	Derivatives in Use	221	10.1	Interest Periods and Effective Rates	375
7.1	Implicit Differentiation	221	10.2	Continuous Compounding	379
7.2	Economic Examples	228	10.3	Present Value	381
7.3	Differentiating the Inverse	232	10.4	Geometric Series	383
7.4	Linear Approximations	235	10.5	Total Present Value	390
7.5	Polynomial Approximations	239	10.6	Mortgage Repayments	395
7.6	Taylor's Formula	243	10.7	Internal Rate of Return	399
7.7	Elasticities	246	10.8	A Glimpse at Difference Equations	401
7.8	Continuity	251		Review Exercises	404
7.9	More on Limits	257	11	Functions of Many Variables	407
7.10	The Intermediate Value Theorem and Newton's Method	266	11.1	Functions of Two Variables	407
7.11	Infinite Sequences	270	11.2	Partial Derivatives with Two Variables	411
7.12	L'Hôpital's Rule	273	11.3	Geometric Representation	417
	Review Exercises	278	11.4	Surfaces and Distance	424
8	Single-Variable Optimization	283	11.5	Functions of More Variables	427
8.1	Extreme Points	283	11.6	Partial Derivatives with More Variables	431
8.2	Simple Tests for Extreme Points	287	11.7	Economic Applications	435
8.3	Economic Examples	290	11.8	Partial Elasticities	437
8.4	The Extreme Value Theorem	294		Review Exercises	439
8.5	Further Economic Examples	300			

12 Tools for Comparative Statics **443**

12.1	A Simple Chain Rule	443
12.2	Chain Rules for Many Variables	448
12.3	Implicit Differentiation along a Level Curve	452
12.4	More General Cases	457
12.5	Elasticity of Substitution	460
12.6	Homogeneous Functions of Two Variables	463
12.7	Homogeneous and Homothetic Functions	468
12.8	Linear Approximations	474
12.9	Differentials	477
12.10	Systems of Equations	482
12.11	Differentiating Systems of Equations	486
	Review Exercises	492

13 Multivariable Optimization **495**

13.1	Two Choice Variables: Necessary Conditions	495
13.2	Two Choice Variables: Sufficient Conditions	500
13.3	Local Extreme Points	504
13.4	Linear Models with Quadratic Objectives	509
13.5	The Extreme Value Theorem	516
13.6	The General Case	521
13.7	Comparative Statics and the Envelope Theorem	525
	Review Exercises	529

14 Constrained Optimization **533**

14.1	The Lagrange Multiplier Method	533
14.2	Interpreting the Lagrange Multiplier	540
14.3	Multiple Solution Candidates	543
14.4	Why the Lagrange Method Works	545
14.5	Sufficient Conditions	549
14.6	Additional Variables and Constraints	552
14.7	Comparative Statics	558
14.8	Nonlinear Programming: A Simple Case	563

14.9	Multiple Inequality Constraints	569
14.10	Nonnegativity Constraints	574
	Review Exercises	578

15 Matrix and Vector Algebra **581**

15.1	Systems of Linear Equations	581
15.2	Matrices and Matrix Operations	584
15.3	Matrix Multiplication	588
15.4	Rules for Matrix Multiplication	592
15.5	The Transpose	599
15.6	Gaussian Elimination	602
15.7	Vectors	608
15.8	Geometric Interpretation of Vectors	611
15.9	Lines and Planes	617
	Review Exercises	620

16 Determinants and Inverse Matrices **623**

16.1	Determinants of Order 2	623
16.2	Determinants of Order 3	627
16.3	Determinants in General	632
16.4	Basic Rules for Determinants	636
16.5	Expansion by Cofactors	640
16.6	The Inverse of a Matrix	644
16.7	A General Formula for the Inverse	650
16.8	Cramer's Rule	653
16.9	The Leontief Model	657
	Review Exercises	661

17 Linear Programming **665**

17.1	A Graphical Approach	666
17.2	Introduction to Duality Theory	672
17.3	The Duality Theorem	675
17.4	A General Economic Interpretation	679
17.5	Complementary Slackness	681
	Review Exercises	686

Appendix **689**

Solutions to the Exercises **693**

Index **801**
