

# Table of Contents

<b>Introduction</b> .....	1	Errors in Replication .....	78
<b>Chronology</b> .....	19	Processing of DNA .....	80
Important Advances that Contributed to the Development of Genetics .....	19	DNA Repair Systems .....	80
<b>Fundamentals</b> .....	25	Transposition .....	82
<b>Prologue</b> .....	26	Trinucleotide Repeat Expansion .....	84
Phylogenetic Tree of Living Organisms	26	<b>Eukaryotic Cells</b> .....	86
Origins of Humans .....	28	Cell Communication .....	86
Out of Africa: Toward Modern Humans .....	30	Haploid and Diploid Yeast Cells .....	88
The Cell and Its Components .....	32	Cell Cycle Control .....	90
Genetic Background of Aging Processes .....	34	Cell Division: Mitosis .....	92
<b>Molecular Basis of Genetics</b> .....	36	Meiosis in Germ Cells .....	94
Carbohydrates .....	36	Meiosis Prophase I .....	96
Lipids (Fatty Acids) .....	38	Formation of Gametes .....	98
Amino Acids .....	40	Programmed Cell Death .....	100
Nucleotides and Nucleic Acids .....	42	Cultured Cells .....	102
DNA and Its Components .....	44	<b>Formal Genetics</b> .....	104
DNA as a Carrier of Genetic Information .....	46	The Mendelian Traits .....	104
DNA Structure .....	48	Transmission to the Next Generation .....	106
DNA Replication .....	50	Independent Distribution .....	108
The Flow of Genetic Information: Transcription and Translation .....	52	Phenotype and Genotype: Application in Genetic Counseling .....	110
Genetic Code .....	54	Segregation of Parental Genotypes ...	112
Eukaryotic Gene Structure .....	56	Monogenic Inheritance .....	114
<b>Analysis of DNA</b> .....	58	Genetic Linkage and Recombination .	116
Restriction Enzymes .....	58	Genetic Linkage and Association .....	118
DNA Amplification (PCR) .....	60	Quantitative Genetic Traits .....	120
DNA Sequencing .....	62	Distribution of Alleles in a Population ...	122
Parallel DNA Sequencing (Next-Generation Sequencing) .....	64	Hardy–Weinberg Equilibrium Principle ...	124
DNA Cloning .....	66	Geographical Differences in Allelic Distribution .....	126
DNA Libraries .....	68	Inbreeding .....	128
Southern Blot Hybridization .....	70	Twins and Twinning .....	130
<b>Variability of DNA</b> .....	72	<b>Chromosomes</b> .....	132
DNA Variants .....	72	Chromosomes and Genes .....	132
Genes and Mutation .....	74	Chromosome Organization .....	134
Mutations Due to Base Modifications .....	76	Functional Elements of Chromosomes	136
		Nucleosomes .....	138
		Packing DNA in Chromosomes .....	140
		The Telomere .....	142
		Chromosomes in Metaphase .....	144
		The Banding Patterns of Human Chromosomes .....	146

Karyotype of Man and Mouse . . . . .	148	Genome Scan and Array–Comparative	
Preparation of Metaphase . . . . .	150	Genomic Hybridization . . . . .	216
Fluorescence <i>in Situ</i> Hybridization . . .	152	Comparative Genomic	
Multicolor Fluorescence <i>In Situ</i>		Hybridization . . . . .	218
Hybridization (FISH) . . . . .	154	Genome-Wide Association Study . . . .	220
Aneuploidy . . . . .	156	Mobile Genetic Elements . . . . .	222
Chromosome Translocation . . . . .	158	Genome Editing by the CRISPR–Cas	
Structural Chromosomal Aberrations .	160	System . . . . .	224
Regulation of Gene Function . . . . .	162	Evolution of Genes and Genomes . . . .	226
Ribosomal RNA and Protein Assembly	162	Comparative Genomics . . . . .	228
Stages of Transcription . . . . .	164	Genomic Structure of the Human	
Basic Principles of Gene Control . . . . .	166	X and Y Chromosomes . . . . .	230
Regulation of Gene Expression in		The Mitochondrial Genome of Man . .	232
Eukaryotes . . . . .	168		
DNA–Protein Interactions . . . . .	170	<b>Genetics in Medicine</b> . . . . .	235
Other Forms of Transcription Control	172	Genetic Classification of Diseases . . . . .	236
Noncoding RNAs . . . . .	174	Genomic Disorders . . . . .	236
Targeted Gene Disruption . . . . .	176	Disorders due to Dysregulated	
Epigenetic Modifications . . . . .	178	Chromatin Structure . . . . .	238
DNA Methylation . . . . .	178	Disorders Resulting from	
Reversible Changes in Chromatin . . . .	180	Rearrangement of <i>Cis</i> -Regulatory	
Genomic Imprinting . . . . .	182	Elements . . . . .	240
Mammalian X Chromosome Inactivation	184	Defects in Telomeres . . . . .	242
Genetic Signal Pathways . . . . .	186	Defective Lamins . . . . .	244
Cellular Signal Transduction . . . . .	186	Dysfunctional Cohesin . . . . .	246
Heterotrimeric G Proteins . . . . .	188	Dysfunctional Cilia (Ciliopathies) . . . .	248
TGF $\beta$ and Wnt/ $\beta$ -Catenin Signaling		Neurocristopathies . . . . .	250
Pathways . . . . .	190	Dysregulated RAS–MAPK Signaling	
Hedgehog and TNF Signal Pathways . .	192	Pathway . . . . .	252
The Notch/Delta Signaling Pathway . .	194	Unstable Repeat Expansion . . . . .	254
Genes in Embryonic Development . . . . .	196	Fragile X Syndrome . . . . .	256
Embryonic Development Genes in		Imprinting Disorders . . . . .	258
<i>Drosophila melanogaster</i> . . . . .	196	Imbalanced Homeostasis . . . . .	260
Hox Genes . . . . .	198	Mitochondrial Diseases . . . . .	260
Zebrafish: A Translucent Vertebrate . .	200	Chloride Channel Defects: Cystic	
Cell Lineage in a Nematode,		Fibrosis . . . . .	262
<i>Caenorhabditis elegans</i> . . . . .	202	Genetic Defects in Ion Channels: LQT	
		Syndromes . . . . .	264
<b>Genomics</b> . . . . .	205	$\alpha_1$ -Antitrypsin Deficiency . . . . .	266
Genomics . . . . .	206	Hemophilia A and B . . . . .	268
Genomics: The Study of the		von Willebrand Bleeding Disease . . . .	270
Organization of Genomes . . . . .	206	Pharmacogenetics . . . . .	272
Genomes of Microorganisms . . . . .	208	Cytochrome P450 (CYP) Genes . . . . .	274
Architecture of the Human Genome . .	210	Metabolic Disorders . . . . .	276
Regulatory Architecture of the Human		Genetics of Diabetes Mellitus . . . . .	276
Genome . . . . .	212	Amino Acid Degradation and Urea	
Genome Analysis with DNA		Cycle Disorders . . . . .	278
Microarrays . . . . .	214	Cholesterol Biosynthesis Pathway . . . .	280

Distal Cholesterol Biosynthesis		Hemoglobin Disorders . . . . .	350
Pathway . . . . .	282	Hemoglobin . . . . .	350
Familial Hypercholesterolemia . . . . .	284	Hemoglobin Genes . . . . .	352
LDL Receptor Mutations . . . . .	286	Sickle Cell Disease . . . . .	354
Lysosomal Storage Disorders . . . . .	288	Mutations in Globin Genes . . . . .	356
Lysosomal Enzyme Defects . . . . .	290	The Thalassemias . . . . .	358
Mucopolysaccharide Storage Diseases	292	Hereditary Persistence of Fetal	
Peroxisomal Disorders . . . . .	294	Hemoglobin (HPFH) . . . . .	360
Immune System . . . . .	296	Sex Determination and Differentiation . .	362
Components of the Immune System .	296	Mammalian Sex Determination . . . . .	362
Immunoglobulin Molecules . . . . .	298	Sex Differentiation . . . . .	364
Generation of Antibody Diversity . . . .	300	Disorders of Sexual Development . . . .	366
Immunoglobulin Gene		Congenital Adrenal Hyperplasia . . . . .	368
Rearrangement . . . . .	302	Sensory Perception . . . . .	370
T-cell Receptor . . . . .	304	Rhodopsin, a Photoreceptor . . . . .	370
The MHC Region . . . . .	306	Pigmentary Retinal Degeneration . . . .	372
Evolution of the Immunoglobulin		Color Vision . . . . .	374
Superfamily . . . . .	308	Auditory System . . . . .	376
Primary Immunodeficiency Diseases .	310	Odorant Receptors . . . . .	378
Origins of Cancer . . . . .	312	Mammalian Taste Receptors . . . . .	380
Genetic Causes of Cancer . . . . .	312	Chromosomal Aberrations . . . . .	382
Categories of Cancer Genes . . . . .	314	Numerical Chromosomal	
Cancer Genomes . . . . .	316	Aberrations . . . . .	382
The <i>TP53</i> Tumor Suppressor Gene . . .	318	Triploidy, Monosomy X, Additional X	
The <i>APC</i> Gene and Polyposis Coli . . . .	320	or Y Chromosome . . . . .	384
Breast and Ovarian Cancer . . . . .	322	Microdeletion Syndromes . . . . .	386
Oncogenic Chromosome		A Brief Guide to Genetic Diagnosis . . . . .	388
Translocations . . . . .	324	A Brief Guide to Genetic Diagnosis . . .	388
Retinoblastoma . . . . .	326	Gene and Stem Cell Therapy . . . . .	390
Neurofibromatosis . . . . .	328	Morbid Anatomy of the Human Genome	392
Genomic Instability Diseases . . . . .	330	Chromosomal Locations of Human	
DNA Excision Repair Disorders . . . . .	332	Genetic Diseases . . . . .	392
Impaired Cell and Tissue Structure . . . .	334	Chromosomal Locations—Alphabetical	
Cytoskeletal Proteins in Erythrocytes .	334	List . . . . .	398
Hereditary Muscular Dystrophies . . . .	336	Appendix . . . . .	403
Duchenne's Muscular Dystrophy . . . .	338	Glossary . . . . .	421
FGF Receptor Mutations in Skeletal		Index . . . . .	447
Dysplasias . . . . .	340		
Marfan's and Loeys–Dietz Syndromes .	342		
Collagen Molecule Disorders . . . . .	344		
Osteogenesis Imperfecta . . . . .	346		
Molecular Basis of Bone			
Development . . . . .	348
