

Table of Contents

1	Introduction	1
	1.1 Enumeration	2
	1.2 Running Time of Algorithms	5
	1.3 Linear Optimization Problems	8
	1.4 Sorting	9
	Exercises	11
	References	12
2	Graphs	15
	2.1 Basic Definitions	15
	2.2 Trees, Circuits, and Cuts	19
	2.3 Connectivity	26
	2.4 Eulerian and Bipartite Graphs	33
	2.5 Planarity	36
	2.6 Planar Duality	43
	Exercises	46
	References	49
3	Linear Programming	53
	3.1 Polyhedra	54
	3.2 The Simplex Algorithm	58
	3.3 Implementation of the Simplex Algorithm	62
	3.4 Duality	65
	3.5 Convex Hulls and Polytopes	69
	Exercises	70
	References	72
4	Linear Programming Algorithms	75
	4.1 Size of Vertices and Faces	75
	4.2 Continued Fractions	78
	4.3 Gaussian Elimination	81
	4.4 The Ellipsoid Method	84
	4.5 Khachiyan's Theorem	90

4.6	Separation and Optimization	93
	Exercises	99
	References	101
5	Integer Programming	103
5.1	The Integer Hull of a Polyhedron	105
5.2	Unimodular Transformations	109
5.3	Total Dual Integrality	111
5.4	Totally Unimodular Matrices	115
5.5	Cutting Planes	120
5.6	Lagrangian Relaxation	124
	Exercises	126
	References	129
6	Spanning Trees and Arborescences	133
6.1	Minimum Spanning Trees	134
6.2	Minimum Weight Arborescences	140
6.3	Polyhedral Descriptions	144
6.4	Packing Spanning Trees and Arborescences	147
	Exercises	151
	References	155
7	Shortest Paths	159
7.1	Shortest Paths From One Source	160
7.2	Shortest Paths Between All Pairs of Vertices	165
7.3	Minimum Mean Cycles	167
7.4	Shallow-Light Trees	169
	Exercises	171
	References	173
8	Network Flows	177
8.1	Max-Flow-Min-Cut Theorem	178
8.2	Menger's Theorem	182
8.3	The Edmonds-Karp Algorithm	184
8.4	Dinic's, Karzanov's, and Fujishige's Algorithm	186
8.5	The Goldberg-Tarjan Algorithm	190
8.6	Gomory-Hu Trees	194
8.7	The Minimum Capacity of a Cut in an Undirected Graph	201
	Exercises	203
	References	210
9	Minimum Cost Flows	215
9.1	Problem Formulation	215
9.2	An Optimality Criterion	218
9.3	Minimum Mean Cycle-Cancelling Algorithm	220
9.4	Successive Shortest Path Algorithm	223
9.5	Orlin's Algorithm	227

9.6	The Network Simplex Algorithm	232
9.7	Flows Over Time	236
	Exercises	238
	References	241
10	Maximum Matchings	245
10.1	Bipartite Matching	246
10.2	The Tutte Matrix	248
10.3	Tutte's Theorem	250
10.4	Ear-Decompositions of Factor-Critical Graphs	253
10.5	Edmonds' Matching Algorithm	259
	Exercises	269
	References	273
11	Weighted Matching	277
11.1	The Assignment Problem	278
11.2	Outline of the Weighted Matching Algorithm	280
11.3	Implementation of the Weighted Matching Algorithm	283
11.4	Postoptimality	296
11.5	The Matching Polytope	297
	Exercises	300
	References	302
12	<i>b</i>-Matchings and <i>T</i>-Joins	305
12.1	<i>b</i> -Matchings	305
12.2	Minimum Weight <i>T</i> -Joins	309
12.3	<i>T</i> -Joins and <i>T</i> -Cuts	313
12.4	The Padberg-Rao Theorem	317
	Exercises	319
	References	323
13	Matroids	325
13.1	Independence Systems and Matroids	325
13.2	Other Matroid Axioms	329
13.3	Duality	334
13.4	The Greedy Algorithm	337
13.5	Matroid Intersection	343
13.6	Matroid Partitioning	347
13.7	Weighted Matroid Intersection	349
	Exercises	353
	References	355
14	Generalizations of Matroids	359
14.1	Greedoids	359
14.2	Polymatroids	363
14.3	Minimizing Submodular Functions	367
14.4	Schrijver's Algorithm	370

14.5	Symmetric Submodular Functions	373
14.6	Submodular Function Maximization	375
	Exercises	378
	References	382
15	NP-Completeness	385
15.1	Turing Machines	386
15.2	Church's Thesis	388
15.3	P and NP	393
15.4	Cook's Theorem	397
15.5	Some Basic NP -Complete Problems	401
15.6	The Class $coNP$	408
15.7	NP -Hard Problems	410
	Exercises	415
	References	419
16	Approximation Algorithms	423
16.1	Set Covering	424
16.2	The Max-Cut Problem	429
16.3	Colouring	435
16.4	Approximation Schemes	443
16.5	Maximum Satisfiability	446
16.6	The PCP Theorem	451
16.7	L-Reductions	454
	Exercises	461
	References	464
17	The Knapsack Problem	471
17.1	Fractional Knapsack and Weighted Median Problem	471
17.2	A Pseudopolynomial Algorithm	474
17.3	A Fully Polynomial Approximation Scheme	476
17.4	Multi-Dimensional Knapsack	479
17.5	The Nemhauser-Ullmann Algorithm	481
	Exercises	484
	References	485
18	Bin-Packing	489
18.1	Greedy Heuristics	490
18.2	An Asymptotic Approximation Scheme	495
18.3	The Karmarkar-Karp Algorithm	499
	Exercises	502
	References	505
19	Multicommodity Flows and Edge-Disjoint Paths	509
19.1	Multicommodity Flows	510
19.2	Algorithms for Multicommodity Flows	515
19.3	Sparsest Cut and Max-Flow Min-Cut Ratio	519

19.4	The Leighton-Rao Theorem	521
19.5	Directed Edge-Disjoint Paths Problem	524
19.6	Undirected Edge-Disjoint Paths Problem	527
	Exercises	533
	References	537
20	Network Design Problems	543
20.1	Steiner Trees	544
20.2	The Robins-Zelikovsky Algorithm	549
20.3	Rounding the Directed Component LP	555
20.4	Survivable Network Design	561
20.5	A Primal-Dual Approximation Algorithm	564
20.6	Jain's Algorithm	572
20.7	The VPN Problem	578
	Exercises	581
	References	585
21	The Traveling Salesman Problem	591
21.1	Approximation Algorithms for the TSP	591
21.2	Euclidean TSP	596
21.3	Local Search	603
21.4	The Traveling Salesman Polytope	610
21.5	Lower Bounds	616
21.6	Branch-and-Bound	618
	Exercises	621
	References	624
22	Facility Location	629
22.1	The Uncapacitated Facility Location Problem	629
22.2	Rounding Linear Programming Solutions	631
22.3	Primal-Dual Algorithms	633
22.4	Scaling and Greedy Augmentation	639
22.5	Bounding the Number of Facilities	642
22.6	Local Search	645
22.7	Capacitated Facility Location Problems	651
22.8	Universal Facility Location	654
	Exercises	661
	References	662
	Notation Index	667
	Author Index	671
	Subject Index	683
