

# Contents

Preface .....	xvii
<b>CHAPTER 1 Introduction .....</b>	<b>1</b>
1.1 Compression Techniques .....	3
1.1.1 Lossless Compression .....	4
1.1.2 Lossy Compression .....	4
1.1.3 Measures of Performance .....	5
1.2 Modeling and Coding .....	6
1.3 Summary .....	9
1.4 Projects and Problems .....	10
<b>CHAPTER 2 Mathematical Preliminaries for Lossless Compression .....</b>	<b>11</b>
2.1 Overview .....	11
2.2 A Brief Introduction to Information Theory .....	11
2.2.1 Derivation of Average Information ★ .....	17
2.3 Models .....	22
2.3.1 Physical Models .....	22
2.3.2 Probability Models .....	23
2.3.3 Markov Models .....	23
2.3.4 Composite Source Model .....	26
2.4 Coding .....	27
2.4.1 Uniquely Decodable Codes .....	27
2.4.2 Prefix Codes .....	30
2.4.3 The Kraft–McMillan Inequality ★ .....	31
2.5 Algorithmic Information Theory .....	34
2.6 Minimum Description Length Principle .....	34
2.7 Summary .....	36
2.8 Projects and Problems .....	36
<b>CHAPTER 3 Huffman Coding .....</b>	<b>41</b>
3.1 Overview .....	41
3.2 The Huffman Coding Algorithm .....	41
3.2.1 Minimum Variance Huffman Codes .....	45
3.2.2 Canonical Huffman Codes .....	47
3.2.3 An In-Place Implementation .....	50
3.2.4 Length-Limited Huffman Codes .....	53
3.2.5 Optimality of Huffman Codes ★ .....	55
3.2.6 Length of Huffman Codes ★ .....	56
3.2.7 Extended Huffman Codes ★ .....	59
3.2.8 Implementation of Huffman Codes .....	62

3.3	Nonbinary Huffman Codes ★	65
3.4	Adaptive Huffman Coding	67
3.4.1	Update Procedure	68
3.4.2	Encoding Procedure	71
3.4.3	Decoding Procedure	73
3.5	Golomb Codes	75
3.6	Rice Codes	76
3.6.1	CCSDS Recommendation for Lossless Compression	77
3.7	Tunstall Codes	78
3.8	Applications of Huffman Coding	81
3.8.1	Lossless Image Compression	81
3.8.2	Text Compression	83
3.8.3	Audio Compression	84
3.9	Summary	85
3.10	Projects and Problems	86
<b>CHAPTER 4</b>	<b>Arithmetic Coding</b>	<b>89</b>
4.1	Overview	89
4.2	Introduction	89
4.3	Coding a Sequence	91
4.3.1	Generating a Tag	92
4.3.2	Deciphering the Tag	98
4.4	Generating a Binary Code	100
4.4.1	Uniqueness and Efficiency of the Arithmetic Code	100
4.4.2	Algorithm Implementation	103
4.4.3	Integer Implementation	108
4.5	Adaptive Arithmetic Coding	116
4.6	Binary Arithmetic Coding	117
4.6.1	The QM Coder	122
4.6.2	The MQ Coder	123
4.6.3	The M Coder	124
4.7	Comparison of Huffman and Arithmetic Coding	125
4.8	Applications	127
4.9	Summary	128
4.10	Projects and Problems	129
<b>CHAPTER 5</b>	<b>Dictionary Techniques</b>	<b>131</b>
5.1	Overview	131
5.2	Introduction	131
5.3	Static Dictionary	132
5.3.1	Digram Coding	133
5.4	Adaptive Dictionary	134
5.4.1	The LZ77 Approach	135
5.4.2	The LZ78 Approach	139

<b>5.5</b>	Grammar-Based Compression	146
5.5.1	SEQUITUR	147
5.5.2	Irreducible Grammars	149
5.5.3	Re-Pair	151
<b>5.6</b>	Applications	153
5.6.1	File Compression—UNIX compress	153
5.6.2	Image Compression—The Graphics Interchange Format (GIF)	154
5.6.3	Image Compression—Portable Network Graphics (PNG)	155
5.6.4	Compression Over Modems—V.42 bis	157
<b>5.7</b>	Beyond Compression—Lempel–Ziv Complexity ★	158
<b>5.8</b>	Summary	160
<b>5.9</b>	Projects and Problems	161
<b>CHAPTER 6</b>	<b>Context-Based Compression</b>	<b>165</b>
<b>6.1</b>	Overview	165
<b>6.2</b>	Introduction	165
<b>6.3</b>	Prediction With Partial Match ( <i>ppm</i> )	167
6.3.1	The Basic Algorithm	167
6.3.2	The Escape Symbol	173
6.3.3	Length of Context	174
6.3.4	The Exclusion Principle	174
<b>6.4</b>	The Burrows–Wheeler Transform	175
6.4.1	Move-to-Front Coding	178
6.4.2	Beyond Compression—Short Read Alignment	180
<b>6.5</b>	Associative Coder of Buyanovsky (ACB)	181
<b>6.6</b>	Dynamic Markov Compression	181
<b>6.7</b>	Summary	183
<b>6.8</b>	Projects and Problems	184
<b>CHAPTER 7</b>	<b>Lossless Image Compression</b>	<b>187</b>
<b>7.1</b>	Overview	187
<b>7.2</b>	Introduction	187
7.2.1	The Old JPEG Standard	188
<b>7.3</b>	CALIC	190
<b>7.4</b>	JPEG-LS	194
<b>7.5</b>	Prediction Using Conditional Averages	196
<b>7.6</b>	Multiresolution Approaches	197
7.6.1	Progressive Image Transmission	198
<b>7.7</b>	Lossless Image Compression Formats	202
<b>7.8</b>	Facsimile Encoding	204
7.8.1	Run-Length Coding	205
7.8.2	CCITT Group 3 and 4—Recommendations T.4 and T.6	205
7.8.3	JBIG	208
7.8.4	JBIG2-T.88	214
<b>7.9</b>	MRC-T.44	216

7.10	Summary .....	218
7.11	Projects and Problems .....	219
<b>CHAPTER 8</b>	<b>Mathematical Preliminaries for Lossy Coding .....</b>	<b>221</b>
8.1	Overview .....	221
8.2	Introduction .....	221
8.3	Distortion Criteria .....	224
8.3.1	The Human Visual System .....	227
8.3.2	Auditory Perception .....	227
8.4	Information Theory Revisited ★ .....	228
8.4.1	Conditional Entropy .....	229
8.4.2	Average Mutual Information .....	231
8.4.3	Differential Entropy .....	233
8.5	Rate Distortion Theory ★ .....	237
8.6	Models .....	245
8.6.1	Probability Models .....	245
8.6.2	Linear System Models .....	247
8.6.3	Physical Models .....	252
8.7	Summary .....	253
8.8	Projects and Problems .....	253
<b>CHAPTER 9</b>	<b>Scalar Quantization .....</b>	<b>257</b>
9.1	Overview .....	257
9.2	Introduction .....	257
9.3	The Quantization Problem .....	258
9.4	Uniform Quantizer .....	263
9.5	Adaptive Quantization .....	273
9.5.1	Forward Adaptive Quantization .....	273
9.5.2	Backward Adaptive Quantization .....	275
9.6	Nonuniform Quantization .....	281
9.6.1	<i>pdf</i> -Optimized Quantization .....	282
9.6.2	Companded Quantization .....	285
9.7	Entropy-Coded Quantization .....	292
9.7.1	Entropy Coding of Lloyd–Max Quantizer Outputs .....	292
9.7.2	Entropy-Constrained Quantization ★ .....	293
9.7.3	High-Rate Optimum Quantization ★ .....	293
9.8	Summary .....	296
9.9	Projects and Problems .....	297
<b>CHAPTER 10</b>	<b>Vector Quantization .....</b>	<b>299</b>
10.1	Overview .....	299
10.2	Introduction .....	299
10.3	Advantages of Vector Quantization Over Scalar Quantization .....	302
10.4	The Linde–Buzo–Gray Algorithm .....	307
10.4.1	Initializing the LBG Algorithm .....	312

10.4.2	The Empty Cell Problem	318
10.4.3	Use of LBG for Image Compression	319
<b>10.5</b>	<b>Tree-Structured Vector Quantizers</b>	<b>323</b>
10.5.1	Design of Tree-Structured Vector Quantizers	326
10.5.2	Pruned Tree-Structured Vector Quantizers	327
<b>10.6</b>	<b>Structured Vector Quantizers</b>	<b>327</b>
10.6.1	Pyramid Vector Quantization	328
10.6.2	Polar and Spherical Vector Quantizers	330
10.6.3	Lattice Vector Quantizers	330
<b>10.7</b>	<b>Variations on the Theme</b>	<b>337</b>
10.7.1	Gain-Shape Vector Quantization	337
10.7.2	Mean-Removed Vector Quantization	337
10.7.3	Classified Vector Quantization	337
10.7.4	Multistage Vector Quantization	338
10.7.5	Adaptive Vector Quantization	340
<b>10.8</b>	<b>Trellis-Coded Quantization</b>	<b>341</b>
<b>10.9</b>	<b>Summary</b>	<b>346</b>
<b>10.10</b>	<b>Projects and Problems</b>	<b>347</b>
<b>CHAPTER 11</b>	<b>Differential Encoding</b>	<b>351</b>
11.1	Overview	351
11.2	Introduction	352
11.3	The Basic Algorithm	354
11.4	Prediction in DPCM	358
11.5	Adaptive DPCM	363
11.5.1	Adaptive Quantization in DPCM	364
11.5.2	Adaptive Prediction in DPCM	364
11.6	Delta Modulation	367
11.6.1	Constant Factor Adaptive Delta Modulation (CFDM)	369
11.6.2	Continuously Variable Slope Delta Modulation	370
11.7	Speech Coding	371
11.7.1	G.726	372
11.8	Image Coding	375
11.9	Summary	376
11.10	Projects and Problems	377
<b>CHAPTER 12</b>	<b>Mathematical Preliminaries for Transforms, Subbands, and Wavelets</b>	<b>379</b>
12.1	Overview	379
12.2	Introduction	379
12.3	Vector Spaces	380
12.3.1	Dot or Inner Product	381
12.3.2	Vector Space	382
12.3.3	Subspace	383
12.3.4	Basis	384
12.3.5	Inner Product—Formal Definition	385

12.3.6	Orthogonal and Orthonormal Sets	385
<b>12.4</b>	<b>Fourier Series</b>	<b>386</b>
<b>12.5</b>	<b>Fourier Transform</b>	<b>388</b>
12.5.1	Parseval's Theorem	390
12.5.2	Modulation Property	390
12.5.3	Convolution Theorem	391
<b>12.6</b>	<b>Linear Systems</b>	<b>391</b>
12.6.1	Time Invariance	392
12.6.2	Transfer Function	392
12.6.3	Impulse Response	393
12.6.4	Filter	395
<b>12.7</b>	<b>Sampling</b>	<b>396</b>
12.7.1	Ideal Sampling—Frequency Domain View	396
12.7.2	Ideal Sampling—Time Domain View	398
<b>12.8</b>	<b>Discrete Fourier Transform</b>	<b>400</b>
<b>12.9</b>	<b>Z-Transform</b>	<b>402</b>
12.9.1	Tabular Method	405
12.9.2	Partial Fraction Expansion	406
12.9.3	Long Division	410
12.9.4	Z-Transform Properties	411
12.9.5	Discrete Convolution	412
<b>12.10</b>	<b>Summary</b>	<b>413</b>
<b>12.11</b>	<b>Projects and Problems</b>	<b>414</b>
<b>CHAPTER 13</b>	<b>Transform Coding</b>	<b>417</b>
<b>13.1</b>	<b>Overview</b>	<b>417</b>
<b>13.2</b>	<b>Introduction</b>	<b>418</b>
<b>13.3</b>	<b>The Transform</b>	<b>422</b>
<b>13.4</b>	<b>Transforms of Interest</b>	<b>427</b>
13.4.1	Karhunen–Loève Transform	427
13.4.2	Discrete Cosine Transform	428
13.4.3	Discrete Sine Transform	430
13.4.4	Discrete Walsh–Hadamard Transform	430
<b>13.5</b>	<b>Quantization and Coding of Transform Coefficients</b>	<b>433</b>
13.5.1	Operational Rate-Distortion Bit Allocation	437
<b>13.6</b>	<b>Application to Image Compression—JPEG</b>	<b>440</b>
13.6.1	The Transform	440
13.6.2	Quantization	441
13.6.3	Coding	443
13.6.4	Format—JFIF	445
<b>13.7</b>	<b>JPEG-XT</b>	<b>448</b>
<b>13.8</b>	<b>Overlapped Transforms</b>	<b>450</b>
13.8.1	Application to Audio Compression—the MDCT	451
13.8.2	Application to Image Compression—JPEG-XR	453

13.9	Summary	455
13.10	Projects and Problems	456
<b>CHAPTER 14</b>	<b>Subband Coding</b>	<b>461</b>
14.1	Overview	461
14.2	Introduction	461
14.3	Filters	466
14.3.1	Some Filters Used in Subband Coding	469
14.4	The Basic Subband Coding Algorithm	472
14.4.1	Analysis	472
14.4.2	Quantization and Coding	473
14.4.3	Synthesis	475
14.5	Design of Filter Banks ★	475
14.5.1	Downsampling ★	477
14.5.2	Upsampling ★	479
14.6	Perfect Reconstruction Using Two-Channel Filter Banks ★	481
14.6.1	Two-Channel PR Quadrature Mirror Filters ★	483
14.6.2	Power Symmetric FIR Filters ★	485
14.7	<i>M</i> -Band QMF Filter Banks ★	488
14.8	The Polyphase Decomposition ★	491
14.9	Bit Allocation	495
14.10	Application to Speech Coding—G.722	497
14.11	Application to Audio Coding—MPEG Audio	499
14.12	Application to Image Compression	499
14.12.1	Decomposing an Image	502
14.12.2	Coding the Subbands	504
14.13	Summary	506
14.14	Projects and Problems	506
<b>CHAPTER 15</b>	<b>Wavelets</b>	<b>511</b>
15.1	Overview	511
15.2	Introduction	511
15.3	Wavelets	514
15.4	Multiresolution Analysis and the Scaling Function	518
15.5	Implementation Using Filters	524
15.5.1	Scaling and Wavelet Coefficients	527
15.5.2	Families of Wavelets	530
15.6	Biorthogonal Wavelets	533
15.7	Lifting	537
15.8	Summary	541
15.9	Projects and Problems	542
<b>CHAPTER 16</b>	<b>Wavelet-Based Image Compression</b>	<b>543</b>
16.1	Overview	543
16.2	Introduction	543
16.3	Embedded Zerotree Coder	545

16.4	Set Partitioning in Hierarchical Trees	553
16.5	JPEG 2000	559
16.5.1	Color Component Transform	560
16.5.2	Tiling	561
16.5.3	Wavelet Transform	562
16.5.4	Quantization	562
16.5.5	Tier I Coding	563
16.5.6	Tier II Coding	570
16.5.7	JPEG 2000 Bitstream	572
16.6	Summary	578
16.7	Projects and Problems	578
<b>CHAPTER 17</b>	<b>Audio Coding</b>	<b>579</b>
17.1	Overview	579
17.2	Introduction	579
17.2.1	Spectral Masking	580
17.2.2	Temporal Masking	581
17.2.3	Psychoacoustic Model	582
17.3	MPEG Audio Coding	583
17.3.1	Layer I Coding	583
17.3.2	Layer II Coding	585
17.3.3	Layer III Coding— <i>mp3</i>	586
17.4	MPEG Advanced Audio Coding	591
17.4.1	MPEG-2 AAC	591
17.4.2	MPEG-4 AAC	595
17.4.3	High Efficiency Advanced Audio Coding (HE AAC)	596
17.5	Dolby AC3 (Dolby Digital)	597
17.5.1	Bit Allocation	599
17.6	Other Standards	601
17.7	Summary	601
<b>CHAPTER 18</b>	<b>Analysis/Synthesis and Analysis by Synthesis Schemes</b>	<b>603</b>
18.1	Overview	603
18.2	Introduction	603
18.3	Speech Compression	605
18.3.1	The Channel Vocoder	605
18.3.2	The Linear Predictive Coder (Government Standard LPC-10)	608
18.3.3	Code Excited Linear Prediction (CELP)	615
18.3.4	Sinusoidal Coders	620
18.3.5	Mixed Excitation Linear Prediction (MELP)	621
18.4	Wideband Speech Compression—ITU-T G.722.2	624
18.5	Coding of Speech for Internet Applications	626
18.5.1	iLBC	626
18.5.2	G.729	630
18.5.3	SILK	633

18.6	Image Compression	635
18.6.1	Fractal Compression	636
18.7	Summary	643
18.8	Projects and Problems	644
<b>CHAPTER 19</b>	<b>Video Compression</b>	<b>645</b>
19.1	Overview	645
19.2	Introduction	645
19.3	Motion Compensation	647
19.4	Video Signal Representation	650
19.5	ITU-T Recommendation H.261	655
19.5.1	Motion Compensation	656
19.5.2	The Loop Filter	657
19.5.3	The Transform	659
19.5.4	Quantization and Coding	659
19.5.5	Rate Control	660
19.6	Model-Based Coding	661
19.7	Asymmetric Applications	662
19.8	The MPEG-1 Video Standard	663
19.9	The MPEG-2 Video Standard—H.262	666
19.9.1	The Grand Alliance HDTV Proposal	669
19.10	ITU-T Recommendation H.263	669
19.10.1	Unrestricted Motion Vector Mode	671
19.10.2	Syntax-Based Arithmetic Coding Mode	671
19.10.3	Advanced Prediction Mode	672
19.10.4	PB-Frames and Improved PB-Frames Mode	672
19.10.5	Advanced Intra Coding Mode	672
19.10.6	Deblocking Filter Mode	672
19.10.7	Reference Picture Selection Mode	672
19.10.8	Temporal, SNR, and Spatial Scalability Mode	673
19.10.9	Reference Picture Resampling	673
19.10.10	Reduced-Resolution Update Mode	673
19.10.11	Alternative Inter VLC Mode	673
19.10.12	Modified Quantization Mode	674
19.10.13	Enhanced Reference Picture Selection Mode	674
19.11	ITU-T Recommendation H.264, MPEG-4 Part 10, Advanced Video Coding	674
19.11.1	Motion-Compensated Prediction	675
19.11.2	The Transform	676
19.11.3	Intra Prediction	676
19.11.4	Quantization	677
19.11.5	Coding	679
19.12	MPEG-4 Part 2	680
19.13	ITU-T Recommendation H.265, MPEG-H Part 2, High Efficiency Video Coding	681
19.13.1	Block Structure	681

19.13.2	Intra Prediction	684
19.13.3	Inter Prediction	689
19.13.4	Transforms	692
19.13.5	Quantization	694
19.13.6	Entropy Coding	696
19.13.7	Slices and Tiles	696
<b>19.14</b>	<b>Packet Video</b>	<b>697</b>
19.14.1	ATM Networks	697
19.14.2	Compression Issues in ATM Networks	697
19.14.3	Compression Algorithms for Packet Video	698
<b>19.15</b>	<b>Summary</b>	<b>699</b>
<b>19.16</b>	<b>Projects and Problems</b>	<b>700</b>
<b>Appendix A Probability and Random Processes</b>		<b>701</b>
<b>A.1</b>	<b>Probability</b>	<b>701</b>
A.1.1	Frequency of Occurrence	701
A.1.2	A Measure of Belief	702
A.1.3	The Axiomatic Approach	704
<b>A.2</b>	<b>Random Variables</b>	<b>705</b>
<b>A.3</b>	<b>Distribution Functions</b>	<b>706</b>
<b>A.4</b>	<b>Expectation</b>	<b>709</b>
A.4.1	Mean	710
A.4.2	Second Moment	710
A.4.3	Variance	710
<b>A.5</b>	<b>Types of Distribution</b>	<b>711</b>
A.5.1	Uniform Distribution	711
A.5.2	Gaussian Distribution	711
A.5.3	Laplacian Distribution	711
A.5.4	Gamma Distribution	712
<b>A.6</b>	<b>Stochastic Process</b>	<b>712</b>
<b>A.7</b>	<b>Projects and Problems</b>	<b>714</b>
<b>Appendix B A Brief Review of Matrix Concepts</b>		<b>715</b>
<b>B.1</b>	<b>A Matrix</b>	<b>715</b>
<b>B.2</b>	<b>Matrix Operations</b>	<b>716</b>
<b>Appendix C The Root Lattices</b>		<b>721</b>
Bibliography		723
Index		735
