Series Preface: Textbook Series in Physical Sciences.....	xv
Preface	xvii
Acknowledgments	xix
Authors.....	xxi

SECTION I — Introduction

Chapter 1.	Light: Its Nature and History of Study.....	3
1.1	Introduction	3
1.2	Light: The Core of Optics.....	5
1.3	Plane Waves	6
1.3.1	Phase.....	6
1.3.2	Amplitude	9
1.3.3	Wavelength.....	10
1.3.4	Period	10
1.3.5	Linear Frequency	10
1.3.6	Energy of a Light Wave.....	10
1.3.7	Intensity	11
1.3.8	Wave Number.....	11
1.3.9	Angular Frequency	11
1.3.10	Velocity.....	12
1.4	Energy and Momentum of Electromagnetic Waves	13
	Problems.....	19

SECTION II — Geometrical Optics of Light

Chapter 2.	Reflection and Refraction.....	25
2.1	Introduction	25
2.2	Reflection.....	26
2.2.1	Basic Definitions.....	26
2.2.2	Laws of Reflection	27
2.3	Image Formation via Reflection.....	27
2.3.1	Plane Mirrors	28
2.3.2	Spherical Mirrors	30
2.3.2.1	Definitions.....	30
2.3.2.2	Sign Convention	31
2.3.2.3	Mirror Equation	32
2.3.2.4	Special Cases	35
2.4	Refraction.....	40
2.4.1	Definitions and Laws of Refraction	41
2.5	Image Formation via Refraction	43
2.5.1	Refraction off a Plane Boundary	43
2.5.2	Refraction and Total Internal Reflection.....	46
2.5.3	Spherical Refracting Surfaces.....	48
2.5.3.1	Sign Convention	48
2.5.3.2	Equation of Refraction for a Spherical Surface.....	50
2.5.3.3	Special Cases	53
	Problems.....	58
Chapter 3.	Paraxial Rays and Lenses.....	63
3.1	Introduction	63
3.2	Thin Lens: Kinds and Shapes	64
3.3	Image Formation in Thin Lenses.....	64
3.3.1	Definitions	65
3.3.2	Sign Convention	65
3.4	Lens Equation.....	66
3.4.1	Focal Points and Focal Lengths of a Thin Lens Derived from the Lens Equation	68
3.4.1.1	Comments and Analyses	71
3.4.2	Image Magnification.....	71
3.5	Ray Tracing	74
3.5.1	Newtonian Form for an Object–Image Relationship in Thin Lenses.....	76

3.5.2	Power and Vergence of a Thin Lens	78
3.6	Combination of Lenses	81
	Problems.....	86
Chapter 4.	Matrix Optics for Paraxial Rays.....	91
4.1	Introduction	91
4.2	Translation Matrix	92
4.3	Refraction Matrix	95
4.3.1	Refraction Matrix of a Plane Boundary.....	95
4.3.2	Refraction Matrix: Spherical Surfaces.....	98
4.4	Multi Operation Matrix: Lenses	102
4.5	Thin Lens: Revisited.....	105
4.5.1	Effective Matrix of an Optical System: Further Analysis	107
	Problems.....	111

SECTION III — Wave Optics

Chapter 5.	Light Waves, Properties, and Propagation	119
5.1	Introduction	119
5.2	Maxwell's Equations	120
5.3	Wave Equation	122
5.4	Types and Properties of Electromagnetic Wave Equations.....	122
5.4.1	Propagation and Transverse Nature of Light Waves	124
5.4.2	Relation between E and B of a Light Wave.	126
5.4.3	Energy and Power of a Light Wave: Poynting Vector	127
5.5	Electromagnetic Wave Equations in Dielectrics	130
5.6	Photon Flux Density	133
	Problems.....	135
Chapter 6.	Light Waves, Coherence, Superposition, and Interference	139
6.1	Introduction	139
6.2	Superposition of Two Waves.....	140
6.2.1	Superposition of Two Waves of the Same Frequency	141
6.2.1.1	Two Waves with a Phase Difference of Integer Multiples of 2π Traveling in the Same Direction.....	141

	6.2.1.2	Two Waves with a Phase Difference of Odd Integer Multiples of π	143
6.3		Superposition of Multiple Waves of Arbitrary Phases ..	146
	6.3.1	Analytic Algebraically Based Method.....	146
	6.3.2	Phasor Diagram	150
6.4		Superposition of Two Waves of a Slightly Different Frequency: Group Velocity	151
6.5		Coherence Is a Must Condition for Sustainable Interference.....	159
		Problems.....	161
Chapter 7.		Double and Multiple-Beam Interference.....	165
	7.1	Introduction	165
	7.2	Young's Double-Slit Experiment	166
		7.2.1 Analysis of Young's Double-Slit Interference Pattern	169
		7.2.2 Further Analysis of Young's Double-Slit Interference Pattern	172
		7.2.2.1 Height of Bright Fringes	172
		7.2.2.2 Width of the Bright Fringes	173
	7.3	Lloyd's Mirror.....	175
	7.4	Newton's Rings.....	176
	7.5	Interference of Light in Thin Films.....	179
	7.6	Multiple-Beam Interference	184
	7.7	Fringes of Equal Inclination: Fizeau Fringes	185
	7.8	Michelson Interferometer	187
		Problems.....	191
Chapter 8.		Diffraction I: Fraunhofer Diffraction.....	193
	8.1	Introduction	193
	8.2	Setup of Single-Slit Diffraction.....	194
		8.2.1 Theory of Single-Slit Diffraction.....	195
		8.2.2 Analysis of Single-Slit Diffraction.....	198
		8.2.2.1 Destructive Diffraction.....	198
		8.2.2.2 Constructive Diffraction	200
		8.2.3 Further Analysis of the Single-Slit Diffraction: The Vibration Curve.....	204
		8.2.3.1 Central Maximum	204
		8.2.3.2 First Minimum	205
		8.2.3.3 First Secondary Maximum	207

8.3	Diffraction from Rectangular Apertures	208
8.4	Double-Slit Diffraction	211
8.4.1	Analysis of Double-Slit Diffraction.....	215
8.5	Diffraction Gratings.....	219
8.5.1	Analysis of the Grating Diffraction Pattern	223
8.5.2	Further Analysis of the Diffraction Pattern for a Grating.....	225
8.6	Angular Dispersion and Power of a Grating.....	227
	Problems.....	230
Chapter 9.	Diffraction II: Fresnel Diffraction	233
9.1	Introduction	233
9.2	Layout and Assumptions: Obliquity Factor.....	234
9.3	Huygens–Fresnel Diffraction	236
9.3.1	Fresnel Half-Period Zone Structure Assumptions and Features	237
9.3.2	Analytic Treatment of Fresnel Diffraction— Circular Aperture	240
9.3.3	Special Remarks on the Amplitude of Fresnel Diffraction	244
9.4	Zone Plate	246
9.5	Fresnel Diffraction for a Rectangular Aperture—Fresnel Zone Structure.....	249
9.5.1	Analytic Solution	250
9.5.2	Cornu Spiral—Geometrical Solution	259
9.5.3	Features of Cornu Spiral.....	260
9.5.4	Applications of the Cornu Spiral: The Straight Edge	264
	Problems.....	269
Chapter 10.	Optics of Multilayer Systems	273
10.1	Introduction	273
10.2	Basic Theory: Dielectric Layer.....	274
10.3	Extension to Multilayer Structures: Characteristic Matrix Technique.....	283
10.4	Ultrathin Single Film	287
10.5	Analytic Formulae for Reflectivity and Transmissivity of Absorbing Films	288
	Problems.....	292

Chapter 11.	Polarization.....	295
11.1	Introduction	295
11.2	Basic Theory	296
11.3	States of Polarization.....	297
11.3.1	Special Cases of Polarization.....	298
11.3.1.1	Linear Polarization.....	298
11.3.1.2	Elliptical and Circular Polarization...	300
11.4	Various Processes of Polarization.....	303
11.4.1	Selective Absorption.....	304
11.4.2	Polarization by Reflection and/or Transmission ..	307
11.4.3	Polarization by Double Refraction.....	309
11.5	Propagation of Light Waves in Double-Refracting Materials.....	311
11.6	Wave Fronts and Refraction of Rays in Birefringent Materials.....	313
	Problems.....	319
Chapter 12.	Fourier Optics	323
12.1	Introduction	323
12.2	Periodic Functions and Fourier Series	324
12.3	Important Integrals.....	330
12.4	Complex Form of Fourier Series	330
12.5	Fourier Transform.....	333
12.6	Relevance of Fourier Transform to Diffraction	336
	Problems.....	338
Chapter 13.	Photonics	343
13.1	Introduction	343
13.2	Classical Physics and Radiation: The Foundation of Modern Photonics	345
13.2.1	Black-Body Radiation	345
13.2.2	Photoelectric Effect.....	352
13.2.3	Hydrogen Spectrum.....	357
13.3	Some Natural Photonics	364
13.4	Human-Engineered Photonic Systems	368
13.4.1	“Light Pipe”	368
13.4.2	Basic Quantum Theory.....	371
13.4.3	LASER	378
13.4.4	Semiconductors, p–n Junction, and Light-Emitting Diode	382

13.4.5	General Motion of an Electron in an Energy Band of an Intrinsic Semiconductor	387
13.4.6	Photon Detectors.....	391
13.4.6.1	Photoconductance Detectors	391
13.4.6.2	Photovoltaic Detectors	393
13.4.6.3	Thermal Photon Detectors.....	397
13.4.6.4	Figures of Merit for Photon Detectors.....	402
	Problems.....	403
Appendix A: Trigonometry		405
Appendix B: Complex Numbers.....		411
Appendix C: Mathematical Operators—Cartesian and Spherical Coordinates.....		417
Appendix D: Matrices		427
Appendix E: Physical Constants.....		433
Appendix F: Examples on Fresnel Diffraction Done on Mathematica... 		435
Appendix G: Solutions of Selected Examples from Chapter 10 Using Excel.....		447
Bibliography.....		451
Index.....		453
