

<b>1</b>	<b>Formal languages, grammars, and their classification</b>	<b>7</b>
1.1	Formal languages . . . . .	7
1.2	Classification of languages (the Chomsky hierarchy) . . . . .	9
1.3	Grammars and their classification . . . . .	11
<b>2</b>	<b>Regular languages</b>	<b>15</b>
2.1	Regular grammars . . . . .	15
2.1.1	Designing a regular grammar for a given language . . . . .	15
2.2	Finite automata . . . . .	22
2.2.1	Designing a finite automaton for a given language . . . . .	25
2.2.2	Removal of unreachable and redundant states . . . . .	37
2.2.3	Removal of $\epsilon$ -transitions . . . . .	41
2.2.4	Transformation of NFA with multiple initial states to NFA with one initial state . . . . .	44
2.2.5	Determinization . . . . .	45
2.2.6	DFA minimization . . . . .	49
2.2.7	Operations on finite automata . . . . .	56
2.3	Regular expressions . . . . .	63
2.3.1	Designing a regular expression for a given language . . . . .	63
2.3.2	Simplification of regular expressions . . . . .	65
2.3.3	Regular equations . . . . .	66
2.3.4	A standard system of regular equations . . . . .	67
2.3.5	Derivatives of regular expressions . . . . .	70
2.4	Relations between regular grammars, regular expressions, and finite automata . . . . .	71
2.4.1	Regular grammar $\rightarrow$ finite automaton . . . . .	72
2.4.2	Finite automaton $\rightarrow$ regular grammar . . . . .	73
2.4.3	Regular expression $\rightarrow$ finite automaton . . . . .	75
2.4.4	Finite automaton $\rightarrow$ regular expression . . . . .	82

2.4.5	Regular grammar $\rightarrow$ regular expression . . . . .	87
2.4.6	Regular expression $\rightarrow$ regular grammar . . . . .	91
2.5	Pumping lemma . . . . .	93
2.5.1	Using pumping lemma for proving that a given language is not regular . . . . .	94
2.5.2	Determination of pumping lemma constant for a given language . . . . .	113
2.6	Myhill–Nerode theorem . . . . .	116
2.6.1	Using Myhill–Nerode theorem for proving that a given language is not regular . . . . .	117
2.6.2	Using Myhill–Nerode theorem for proving that a given language is regular . . . . .	124
2.7	Closure properties . . . . .	125
2.7.1	Using closure properties for proving that a given language is not regular . . . . .	125
<b>3</b>	<b>Context-free languages</b>	<b>128</b>
3.1	Context-free grammars . . . . .	128
3.1.1	Parse tree . . . . .	128
3.1.2	Ambiguous and unambiguous context-free grammars . . . . .	129
3.1.3	Designing a context-free grammar for a given language . . . . .	130
3.1.4	Exclusion of $\epsilon$ -rules . . . . .	141
3.1.5	Exclusion of simple rules . . . . .	143
3.1.6	Exclusion of redundant symbols . . . . .	145
3.1.7	Exclusion of left recursion . . . . .	148
3.1.8	Chomsky normal form . . . . .	151
3.2	Cocke–Younger–Kasami algorithm . . . . .	154
3.3	Pushdown automata . . . . .	159
3.3.1	Designing a pushdown automaton for a given language . . . . .	163
3.3.2	Parsing (syntactic analysis, context-free grammar $\rightarrow$ pushdown automaton) . . . . .	175
<b>4</b>	<b>Formal translations</b>	<b>178</b>
4.1	Translation grammars . . . . .	178
4.1.1	Designing a regular translation grammar for a given translation . . . . .	179
4.1.2	Designing a context-free translation grammar for a given translation . . . . .	180
4.2	Translation automata . . . . .	183
4.2.1	Designing a finite transducer for a given translation . . . . .	185
4.2.2	Designing a pushdown translation automaton for a given translation . . . . .	186
<b>5</b>	<b>Context-sensitive languages</b>	<b>190</b>
5.1	Context-sensitive grammars . . . . .	190
5.1.1	Designing a context-sensitive grammar for a given language . . . . .	191
5.2	Linear bounded automata . . . . .	192
5.2.1	Designing a linear bounded automaton for a given language . . . . .	194

<b>6</b>	<b>Recursively enumerable languages</b>	<b>196</b>
6.1	Unrestricted grammars	196
6.1.1	Designing an unrestricted grammar for a given language	197
6.2	Turing machine	197
6.2.1	Designing a Turing machine for a given language	198
6.2.2	P and NP complexity classes	198
