SECTION 1. PATHOGENS AND PATHOGEN MANIPULATION

1. Viruses 1

Roger Hull

1. Introduction 1

What is a virus? 1

Groups of plant viruses 2

2. Virus purification 4

Propagation of plant viruses 4

Purification 5

3. Characterization of viruses 7

Viral nucleic acids 7

Viral coat proteins 8

Non-structural proteins 8

References 8

2. Geminiviruses (wheat dwarf virus) 11

Philip Mullineaux

1. Introduction 11

2. Vectors based on the WDV replicon 12

3. Replication of WDV DNA in *Triticum monococcum* protoplasts 13

The suspension culture and preparation of protoplasts 13

Inoculation of *T. monococcum* protoplasts with plasmid DNA 14

Extraction and analysis of protoplast DNA 15

Results 16

4. Transient assay of a reporter gene in plant tissues 18

A leaf based assay 18

Particle bombardment of barley microspore-derived embryos 20

5. Future refinements 21

Acknowledgements 22

References 22

3. RNA-based viruses	23
<i>Philip Kroner and Paul Ahlquist</i>	
1. Introduction	23
2. Synthesis and convenient fusion of viral cDNA to suitable promoters for <i>in vitro</i> transcription	24
3. <i>In vitro</i> synthesis of infectious transcripts	25
4. Isolation of barley protoplasts	26
5. Inoculation of barley protoplasts	28
6. Analysis of viral replication in protoplasts	29
Isolation of virions from infected protoplasts	29
Northern blot analysis of viral RNA accumulation	32
Acknowledgements	33
References	33
4. Bacteria	35
<i>Michael J. Daniels</i>	
1. Diversity and taxonomy	35
2. Diseases and habitats	37
3. Culturing plant pathogenic bacteria	38
4. Testing pathogenicity	39
5. Genetic methodology	40
Mutagenesis	41
Genetic mapping	41
Gene transfer	41
Gene cloning	41
References	42
5. Introduction of cloned DNA into plant pathogenic bacteria	45
<i>Noel T. Keen, Hao Shen, and Donald A. Cooksey</i>	
1. Introduction	45
2. Plasmids for conjugation and electroporation	46
3. Electroporation	46
4. Conjugation	48
5. Discussion	49
References	50

Contents

6. RFLP analyses and gene tagging for bacterial identification and taxonomy	51
<i>Dean W. Gabriel and Robert de Feyter</i>	
1. Introduction	51
2. Phylogeny, taxonomy, and strain identification of unknown isolates	51
3. RFLP analyses	54
4. Similarity coefficients	59
5. Plasmid DNAs	62
6. Gene tagging for known strain identification	63
Marker exchange by using an incompatible plasmid	64
Acknowledgements	64
References	64
7. Fungi	67
<i>John M. Clarkson</i>	
1. Introduction	67
Mode of nutrition	67
Thallus organization	67
Hyphal structure	68
Cell wall composition	69
2. Genome organization	69
3. Genetic analysis	71
4. Genetics of the host–pathogen interaction	71
5. Fungal pathogenicity determinants	72
Polymer degrading enzymes	72
Phytoalexin detoxifying enzymes	73
Toxins	73
Plant growth regulators	74
6. Obtaining cultures of fungal plant pathogens	74
References	75
8. Gene transformation in plant pathogenic fungi	79
<i>John Hargreaves and Geoffrey Turner</i>	
1. Introduction	79
2. Transformation vectors	79
Selectable markers for transformation of plant pathogens	79

Contents

Improvement of transformation frequency by additional DNA sequences	84
3. Transformation techniques	85
Protoplast preparation	85
DNA uptake	86
Regeneration and selection of transformants	88
Whole cell techniques	91
4. Strain storage	93
5. Cloning pathogenicity genes by complementation	94
Acknowledgements	95
References	95
9. Nematodes	99
Howard J. Atkinson	
1. Introduction	99
2. Economic status	99
3. Control	100
4. Biology	100
Cyst nematodes	100
Root-knot nematodes	101
5. Pathology	103
Effects on whole plant and yield	103
Histopathology	103
Plant responses	105
Disease associations	105
6. Resistance	106
<i>Globodera</i> spp.	106
<i>Meloidogyne</i> spp.	106
7. Conclusions	106
References	107
SECTION 2. DEFENCE RESPONSES (GENES)	
10. Nucleic acid isolation and hybridization techniques	109
Sarah Jane Gurr and Michael J. McPherson	
1. Introduction	109
2. Preparation of high molecular weight DNA	109
Introduction	109

Contents

Harvesting plant and fungal tissue	110
DNA extraction	110
3. RNA extraction	112
Introduction	112
Harvesting plant and fungal tissue	112
Isolation of total RNA	112
Northern blot analysis	113
4. Southern blot analysis	114
5. Labelling, handling, and storage of nucleic acid probes	114
Enhanced chemiluminescence system (ECL)	115
Digoxigenin labelling system (DIG)	117
Radioactive labelling	119
Acknowledgements	120
References	120
11. The polymerase chain reaction	123
<i>Michael J. McPherson, Richard J. Oliver, and Sarah Jane Gurr</i>	
1. Introduction	123
2. Principles of the polymerase chain reaction (PCR)	123
Fidelity of <i>Taq</i> polymerase	124
Contamination problems	125
3. Requirements for the PCR	126
Thermal cycling instruments	126
Thermostable <i>Taq</i> polymerases	126
PCR buffers	126
dNTPs	127
Oligonucleotide primers	127
Template DNA	127
4. Basic PCR procedures	128
Reaction conditions	129
Multiple PCR reactions	130
Specificity of the PCR	130
Analysis of PCR products	130
Primer and primer-dimer bands	132
Recovery of DNA from agarose	132
Reamplification of PCR products	133
Sequencing of PCR amplified DNA	133
Cloning of PCR products	135
PCR screen of recombinant clones	135
5. Design of primers for the PCR	136
PCR primers based on peptide sequence data	137

Design of degenerate primers	138
Comparison of oligonucleotide probes with PCR primers	139
6. cDNA cloning from small quantities of plant material	140
Plant PCR libraries	140
7. Genome analysis by RAPD PCR	142
Principles of RAPD PCR	142
RAPD amplification of genomic DNA	142
Acknowledgements	144
References	144
12. Analysis of defence gene transcriptional regulation	147
<i>Maria J. Harrison, Arvind D. Choudhary, Michael A. Lawton, Christopher J. Lamb, and Richard A. Dixon</i>	
1. Introduction	147
2. Isolation of plant nuclei	148
Nuclei for run-off transcription assays	148
Nuclei for isolation of nuclear proteins	149
3. Nuclear transcript run-off analysis	150
4. Isolation and assay of <i>trans</i>-acting factors	150
Introduction	150
Preparation of nuclear extracts	151
Gel retardation assays	152
DNAase I footprinting	153
Chemical footprinting	155
Strategies for the cloning of plant <i>trans</i> -acting factors	156
5. <i>In vivo</i> analysis of <i>cis</i>-acting sequences and <i>trans</i>-acting factors	156
Introduction	156
Transient promoter expression assays	156
<i>In vivo</i> genomic footprinting	160
References	160
13. <i>In situ</i> hybridization in plants	163
<i>David Jackson</i>	
1. Introduction	163
2. Fixation and wax embedding	164
3. Prehybridization	166
4. Hybridization	167
Probe type	167

Contents

Probe labelling	169
Probe concentration	169
Hybridization conditions	169
5. Post-hybridization treatments and autoradiography	170
6. Analysis of results, controls, and artefacts	173
Acknowledgements	174
References	174
14. Gene expression using baculoviruses	175
<i>Iain R. Cameron and David H. L. Bishop</i>	
1. Introduction	175
The Baculoviridae	175
Baculoviruses as expression vectors	175
2. Cells, viruses, and transfer vectors	177
<i>Spodoptera frugiperda</i> cells	177
<i>Autographa californica</i> Nuclear Polyhedrosis Virus	177
Some commonly used transfer vectors	177
3. Culture of <i>Spodoptera frugiperda</i> (Sf) cells	178
Monolayer culture	179
Suspension culture	179
Cell storage	179
4. <i>In vitro</i> manipulation of AcNPV baculoviruses	179
Titration of AcNPV baculovirus in cell culture	179
Propagation of AcNPV in <i>Spodoptera frugiperda</i> cells	180
Purification of infectious AcNPV DNA	181
5. Generation of recombinant AcNPV baculoviruses	182
Insertion of foreign genes into a transfer vector	182
Transfection of vector and virus DNA into insect cells	182
Selection of recombinant viruses	184
6. Expression of foreign genes from baculoviruses	185
Expression of Hepatitis B proteins in a baculovirus vector	186
Systems for multiple expression of foreign genes	187
Acknowledgements	188
References	189

Appendices

A1. Characterized defence response genes	191
<i>Richard A. Dixon</i>	
A2. Suppliers of specialist items	203

<i>Index</i>	207
