Preface	xvii
Acknowledgements	xix
1 Basic concepts	1
1.1 Introduction	1
1.1.1 What is chemistry?	2
1.1.2 The states of matter	2
1.1.3 Elements, compounds and mixtures	3
1.2 Measurement and units	4
1.2.1 Scales of units	4
1.2.2 A review of some commonly used measurements	5
1.2.3 Accuracy and precision	7
1.3 Atoms	7
1.3.1 Representation of atoms	8
1.3.2 Isotopes	9
1.3.3 Isotopes, radioactivity and the types of radiation	10
1.3.4 Electrons	12
1.3.5 Molecules	14
1.4 The concepts of stoichiometry: calculations of quantity in chemistry	14
1.4.1 Introduction	14
1.4.2 Avogadro's number and the concept of the mole	15
1.4.3 Formulae and molecular mass	15
1.4.4 Mass percent composition	17
1.4.5 Empirical and molecular formulae	18
1.4.6 Writing and balancing chemical equations	19
1.4.7 Balancing equations: a systematic approach	20
1.4.8 Moles and masses	21
1.4.9 Concentration of solutions	21
Questions	23
2 Atoms, periodicity and chemical bonding	25
2.1 Introduction	25
2.2 Electronic structure	26
2.3 Electromagnetic radiation	26
2.4 The Bohr model of the atom	29

2.5	An introduction to atomic orbitals	29
2.5.1	Quantum numbers	30
2.5.2	The Pauli exclusion principle	34
2.6	Electron configurations in atoms	34
2.6.1	How electrons are arranged in shells and subshells	34
2.6.2	The aufbau principle	35
2.6.3	Hund's rule of maximum multiplicity	35
2.6.4	The noble gases and abbreviated configurations	37
2.7	The periodic table	37
2.7.1	Periodic properties	39
2.8	An introduction to bonding: how atoms become molecules	44
2.8.1	Introduction	44
2.8.2	Ionic bonding	44
2.8.3	Covalent bonding	46
2.8.4	Formal oxidation states	48
2.8.5	Polarisation: covalent or ionic bonding?	49
2.8.6	Metallic bonding	51
2.8.7	Shapes of molecules: the VSEPR approach	51
2.8.8	Resonance	55
2.9	Covalent bonding: atomic and molecular orbitals	57
2.9.1	The hydrogen molecule	57
2.9.2	Bonding in alkane hydrocarbons	58
2.9.3	Bonding in alkene hydrocarbons	59
2.9.4	Bonding in alkyne hydrocarbons	61
2.9.5	Hybridisation in atoms other than carbon	63
2.10	Intermolecular forces	65
2.10.1	Dipole–dipole interactions	65
2.10.2	Dispersion (London) forces	66
2.10.3	Hydrogen bonding	66
	Questions	69
3	An introduction to the chemistry of carbon	73
3.1	Introduction	73
3.2	Properties of carbon	75
3.2.1	Representations of organic structures	76
3.3	Classification of organic molecules	77
3.3.1	Nomenclature (naming) of organic compounds	78
3.3.2	Systematic nomenclature	78
3.3.3	Introduction to the functional groups concept	84
3.3.4	Naming of aliphatic compounds containing functional groups	90
3.4	The structure of organic molecules	92
3.4.1	Structural features of organic chemistry	92
3.4.2	Introduction to isomerism	93
3.4.3	Structural/constitutional isomerism	93
3.4.4	Introduction to stereoisomerism	94
3.4.5	Conformation	95
3.4.6	Introduction to configurational isomerism	102
3.4.7	Geometrical isomerism	102
3.4.8	Symmetry, chirality and optical isomerism	105
3.4.9	Some examples of why shape is important	112
	Questions	114

4 Energetics	117
4.1 Introduction	117
4.1.1 The idea of energy	118
4.1.2 Energy: heat, work and the first law of thermodynamics	118
4.2 Temperature and heat	119
4.2.1 The nature of heat	119
4.2.2 Heat capacity, C , and specific heat capacity, c	120
4.2.3 Endothermic and exothermic processes	120
4.3 The first law of thermodynamics: introducing the concept of work	122
4.3.1 The nature of work	122
4.3.2 Energy in the chemistry context	123
4.3.3 The concept of enthalpy	123
4.3.4 Examples of enthalpy changes in biological processes	128
4.3.5 The determination of enthalpies: Hess's law	129
4.4 Spontaneous processes, entropy and free energy	134
4.4.1 The second law of thermodynamics	135
4.4.2 Free energy and ATP: coupling of reactions	138
4.4.3 Biological example: thermodynamic rationale of micelle behaviour	139
Questions	141
5 Equilibria: how far does a reaction go?	143
5.1 Introduction	143
5.2 Developing the idea of equilibrium: the equilibrium constant	144
5.2.1 Calculation of equilibrium constants and concentrations	145
5.3 Equilibrium and energetics	147
5.3.1 Background	147
5.3.2 The reaction quotient	149
5.3.3 Calculating equilibrium constants in the gas phase, using partial pressures; K_p	151
5.4 The relationship between ΔG^\ominus and K	151
5.4.1 A more detailed look at reaction quotient Q and equilibrium constant, K	152
5.5 Disturbing an equilibrium	155
5.5.1 Statement of Le Chatelier's principle	155
5.5.2 Le Chatelier's principle and the effect of temperature on equilibria	156
5.5.3 Examples involving Le Chatelier's principle	157
5.6 Energetics and equilibria in the biological context	159
5.6.1 Calculating ΔG^\ominus from experimentally determined compositions (via K values)	159
5.6.2 Calculating equilibrium compositions from ΔG^\ominus	160
5.6.3 Macromolecule–ligand interactions	160
5.6.4 Haemoglobin–oxygen	162
5.7 Revisiting coupled reactions	163
Questions	165

6	Aqueous equilibria	168
6.1	Introduction	168
6.1.1	Why is this important in biology?	168
6.1.2	The importance of pH and pH control	168
6.2	Self-ionisation of water	169
6.3	Acids and bases	170
6.3.1	What do the terms acid and base mean?	170
6.3.2	Properties of acids	171
6.3.3	Properties of bases	171
6.3.4	<i>Strong acids and strong bases</i>	171
6.4	Acid–base equilibria	173
6.4.1	Behaviour of weak acids	173
6.4.2	Behaviour of weak bases	175
6.5	Dissociation of acids and bases: conjugate acids and bases	175
6.6	Acids and bases in aqueous solution: the concept of pH	177
6.6.1	Definition	177
6.6.2	What happens when acids are dissolved in water?	179
6.6.3	What happens when the water equilibrium is disturbed?	180
6.6.4	Calculating pH values for acids	181
6.7	The control of pH: buffer solutions	184
6.7.1	Background	184
6.7.2	Theoretical aspects of buffers	185
6.7.3	General strategy for making buffer solutions	186
6.8	Polyprotic acids	190
6.9	Salts	192
6.9.1	Introduction	192
6.9.2	Titrations	193
6.10	Introducing solubility	195
6.10.1	Solubility of sugar and salt	195
6.10.2	Insoluble ionic compounds: the concept of solubility product	196
6.10.3	The common ion effect	197
	Questions	198
7	Biomolecules and biopolymers	200
7.1	Introduction	200
7.2	Lipids	201
7.2.1	Fats, oils and fatty acids	201
7.2.2	Triglyceride fats	203
7.2.3	Uses of fats: micelles	204
7.2.4	Phospholipids	206
7.2.5	Waxes	206
7.2.6	Steroids	206
7.3	Carbohydrates	207
7.3.1	Monosaccharides	208
7.3.2	Carbohydrate stereochemistry	209
7.3.3	Cyclisation in sugars	209
7.3.4	Disaccharides and polysaccharides	213
7.4	Amino acids, peptides and proteins	215
7.4.1	Introduction	215

7.4.2	Acid–base behaviour of amino acids: zwitterions	216
7.4.3	The isoelectric point	217
7.4.4	The stereochemistry of amino acids	219
7.4.5	Peptides and proteins	221
7.4.6	Primary, secondary, tertiary and quaternary structures	222
7.4.7	Denaturing of proteins	226
7.5	Nucleic acids	227
7.5.1	Introduction	227
7.5.2	Primary structure of nucleic acids	228
7.5.3	Secondary structure in nucleic acids	229
7.5.4	Structural features of RNA	231
	Questions	233

8 Reaction mechanisms 236

8.1	Introduction	236
8.2	Organic reaction types	236
8.2.1	Addition reactions	237
8.2.2	Elimination reactions	237
8.2.3	Substitution reactions	237
8.2.4	Isomerisation reactions	238
8.2.5	Oxidation and reduction	238
8.3	Reaction mechanisms	238
8.3.1	Catalysts	239
8.3.2	Homolysis	240
8.3.3	Heterolysis	240
8.3.4	Carbocations and carbanions; types and key points	242
8.4	Electronegativity and bond polarity	243
8.5	Addition reactions	244
8.5.1	Electrophilic additions to alkenes and alkynes	244
8.5.2	Addition of HBr to asymmetrical alkenes	246
8.5.3	Addition of other electrophiles to alkenes	249
8.5.4	Electrophilic addition in biology	250
8.5.5	Electrophilic addition without subsequent nucleophilic addition; loss of H ⁺	251
8.5.6	Addition of HBr to conjugated dienes	251
8.5.7	Additions to alkynes	252
8.5.8	The addition of water (acidified) to an alkyne	253
8.6	Substitution reactions	253
8.6.1	Nucleophilic substitution at a saturated carbon atom	253
8.6.2	Bimolecular nucleophilic substitution S _N 2	253
8.6.3	Unimolecular nucleophilic substitution S _N 1	254
8.6.4	Determining which mechanism is followed	256
8.7	Elimination reactions	256
8.7.1	Bimolecular elimination, E2	257
8.7.2	Unimolecular elimination, E1	257
8.8	Biological example of an S _N 2 reaction	259
8.9	Reaction mechanisms of carbonyl compounds	260
8.9.1	Introduction	260
8.9.2	Structure of the carbonyl group, C=O	260
8.9.3	Mesomeric effects	261
8.10	Reactions of aldehydes and ketones	262

8.10.1	Reaction of aldehydes and ketones with 'hydride'	262
8.10.2	Hydration of aldehydes and ketones	262
8.10.3	Hemiacetal formation	263
8.10.4	Acetal (ketal) formation	265
8.10.5	Formation of Schiff's bases and imines	266
8.10.6	Oxidation of aldehydes and ketones	267
8.11	Carboxylic acid derivatives	267
8.11.1	Esters	268
8.11.2	Amides	269
8.12	Enolisation and enolisation reactions	270
8.12.1	Enols as carbon nucleophiles	270
8.12.2	Base-catalysed enolisation	270
8.13	Reactions resulting from enolisation	271
8.13.1	The aldol reaction	271
8.13.2	Crossed aldol reactions/condensations	272
8.13.3	Claisen condensations	272
8.14	Reaction mechanisms in biological reactions: synthesis of steroids	274
8.15	Summary of mechanisms of carbonyl reactions under different conditions	277
8.15.1	Acid present	277
8.15.2	No acid present	277
8.15.3	Enolisation	278
	Questions	280
9	Chemical kinetics and enzymes	283
9.1	Introduction	283
9.2	Rates, rate laws and rate constants	284
9.2.1	Rate of reaction	284
9.2.2	Rates and concentration	288
9.2.3	Units of the rate constant	290
9.2.4	Determination of rate laws and rate constants	292
9.3	Temperature dependence of reaction rates and rate constants	300
9.4	Reaction mechanisms	302
9.4.1	Deducing reaction mechanisms	304
9.4.2	A more comprehensive look at complex reaction mechanisms	305
9.5	Kinetics of enzyme-catalysed reactions	307
9.5.1	Catalysts and catalysis	307
9.5.2	Enzymes as catalysts	307
9.5.3	Single substrate enzyme reactions	308
9.5.4	Analysis of enzyme kinetic data	312
9.6	Enzyme inhibition	314
9.6.1	Mechanisms of inhibition	314
	Questions	317
10	Bioenergetics and bioelectrochemistry	320
10.1	Introduction	320
10.2	Electrochemical cells	322
10.2.1	Cells and cell nomenclature	324

10.2.2	Types of half-cell	324
10.2.3	Measurement of cell voltage	326
10.2.4	Free energy relationship	328
10.2.5	Determination of the reaction taking place in a cell	329
10.2.6	Effect of concentration	330
10.3	Sensors and reference electrodes	334
10.3.1	The silver electrode	334
10.3.2	The calomel electrode	335
10.3.3	Detecting pH	336
10.4	Biological relevance	340
10.4.1	Biochemical/biological standard state	340
10.4.2	Biological membranes	340
10.4.3	The thermodynamics of membrane transport	341
10.4.4	Proton motive force	344
	Questions	346
11	The role of elements other than carbon	348
11.1	Introduction	348
11.2	Phosphorus and phosphate esters	349
11.2.1	Phosphoric acid and phosphate esters	349
11.2.2	Relevance to biology	350
11.3	Metals in the chemistry of biology	352
11.3.1	Bulk metals	352
11.3.2	Trace (catalytic) metals	353
11.4	Transition metals and their role in biological systems	353
11.4.1	Introduction to ligands in biological systems	354
11.4.2	Introduction to transition metals	355
11.4.3	Crystal field theory	358
11.4.4	Examples of transition metals in biological systems	362
11.5	The alkali and alkaline-earth metals	368
11.5.1	Introduction	368
11.5.2	Solid-state structures	368
11.5.3	Coordination chemistry of group 1 and group 2 metals	369
11.5.4	Ions of alkali and alkaline-earth metals in biology	371
	Questions	374
12	Metabolism	375
12.1	Introduction	375
12.2	Glycolysis	376
12.2.1	Introduction to glycolysis	376
12.2.2	The glycolysis pathway	377
12.3	Analysis of the mechanism of glycolysis	379
12.3.1	Glycolysis step 1	379
12.3.2	Glycolysis step 2	379
12.3.3	Glycolysis step 3	380
12.3.4	Glycolysis step 4	381
12.3.5	Glycolysis step 5	382
12.3.6	Glycolysis step 6	383
12.3.7	Glycolysis step 7	384
12.3.8	Glycolysis step 8	384

12.3.9	Glycolysis step 9	384
12.3.10	Glycolysis step 10	385
12.3.11	Summary	386
12.4	What now? Where does the pyruvate go?	387
12.4.1	Conversion of pyruvate into lactate	387
12.4.2	Conversion of pyruvate into ethanol	388
12.4.3	Conversion of pyruvate into acetyl coenzyme A	390
12.5	The TCA cycle	391
12.5.1	Introduction and overview	391
12.6	Analysis of the mechanism of the TCA cycle	393
12.6.1	TCA cycle, step 1	393
12.6.2	TCA cycle, step 2	394
12.6.3	TCA cycle, step 3	395
12.6.4	TCA cycle, step 4	395
12.6.5	TCA cycle, step 5	396
12.6.6	TCA cycle, step 6	396
12.6.7	TCA cycle, step 7	397
12.6.8	TCA cycle, step 8	397
12.7	Summary of outcomes of the glycolysis and TCA cycles	398
12.8	Gluconeogenesis	398
12.9	Summary	401
	Questions	401

13 Structural methods **403**

13.1	Introduction	404
13.2	Mass spectrometry	404
13.2.1	Background	404
13.2.2	Analysis of a mass spectrum	405
13.2.3	Isotopes: complicating factors or diagnostic tools?	406
13.2.4	Fragmentation pathways involving functional groups	409
13.2.5	Uses in biology	410
13.3	Introduction to electromagnetic radiation	411
13.4	Ultraviolet and visible (UV–vis) spectroscopy	412
13.4.1	Introduction	412
13.4.2	Measurement of the spectrum	413
13.4.3	Using UV–visible spectra for characterising compounds	413
13.4.4	Aromatic compounds	414
13.4.5	Using UV–visible spectra for measuring concentrations of biologically important compounds	415
13.5	Infrared (IR) spectroscopy	416
13.5.1	Introduction	416
13.5.2	Measurement of the spectrum	416
13.5.3	Interpretation of IR spectra	416
13.6	Nuclear magnetic resonance (NMR) spectroscopy	418
13.6.1	Introduction and basic principles	418
13.6.2	Design of the NMR spectrometer	421
13.6.3	The ^1H NMR spectrum	422
13.6.4	The chemical shift	424
13.6.5	Peak areas – integration	426
13.6.6	The solvent	427

13.6.7	Exchangeable hydrogens	427
13.6.8	Nuclear spin–spin coupling	428
13.6.9	^{13}C NMR spectroscopy	432
13.7	X-ray diffraction	434
13.8	Summary of the techniques	436
	Questions	437
Appendix 1: Basic mathematical tools for biological chemistry		441
Appendix 2: Answers to end of chapter questions		465
Appendix 3: Periodic table of the elements		481
Index		482
