		vii
	Preface	
1	Introduction	1
1.1	Aims of the book	2
1.2	Why temporal logic?	3
1.3	What is temporal logic?	4
1.4	Structure of the book	6
2	Temporal logic	9
2.1	Intuition	10
2.2	Syntactic aspects	12
2.3	Semantics	14
2.4	Reactive system properties	22
2.5	What is temporal logic?	25
2.6	Normal form	28
2.7	Büchi automata and temporal logic	29
2.8	Advanced topics	37
2.9	Final exercises	47
3	Specification	49
3.1	Describing simple behaviours	49
3.2	A semantics of imperative programs	53
3.3	Linking specifications	60
3.4	Advanced topics	74
3.5	Final exercises	82
3.6	Where to next?	83
4	Deduction	85
4.1	Temporal proof	85
4.2	Clausal temporal resolution	87
4.3	The TSPASS system	108
4.4	Advanced topics	122
4.5	Final exercises	127

5	Model checking	129
5.1	Algorithmic verification	129
5.2	Automata-theoretic model checking	135
5.3	The Spin system	143
5.4	Advanced topics	171
5.5	Final exercises	181
6	Execution	185
6.1	From specifications to programs	185
6.2	METATEM: executing temporal formulae	188
6.3	The Concurrent MetateM system	211
6.4	Advanced topics	233
7	Selected applications	243
7.1	Model checking programs	243
7.2	Security protocol analysis	246
7.3	Recognizing temporal patterns	251
7.4	Parameterized systems	255
7.5	Reasoning with intervals	260
7.6	Planning	264
8	Summary	267
A	Review of classical logic	269
A.1	Introduction	269
A.2	Propositional logic	271
A.3	Normal forms	276
A.4	Propositional resolution	279
A.5	Horn clauses	286
A.6	First-order logic	288
B	Solutions to exercises	307
	References	321
	Index	349
