1	Introduction	1
1.1	Historical Perspective	2
Part I General Hydrogeology		
2	Theories and Basic Terminology	7
2.1	Definition of Groundwater	7
2.2	Theories and Definitions of Groundwater Recharge	7
2.3	Basic Hydrogeological Terms	8
3	Voids in the Subsoil	11
3.1	Pore Voids	11
3.1.1	Porosity	11
3.1.2	Void Ratio	14
3.1.3	Grain Shape and Roughness	14
3.1.4	Grain Size Distribution	14
3.1.5	Bulk Density	15
3.2	Interface (Joint) Voids	16
3.3	Karst Voids	18
3.4	Anthropogenic Voids	19
4	Geohydraulics	21
4.1	Geohydraulic Conductivity of Porous Rocks	22
4.1.1	Darcy's Law	22
4.1.2	Permeability	23
4.1.3	Determination and Classification of Permeability	24
4.1.4	Velocity Terms	24
4.2	Anisotropy	27
4.3	Geohydraulic Conductivity of Jointed Rocks	28
4.4	Transmissivity	29
4.5	Leakage	30
4.6	Storage Coefficient	30
5	Surface Water Infiltration	33
5.1	Rain Water Infiltration	33
5.2	Bank Infiltration	37
6	Groundwater Dynamics	39
6.1	Groundwater Flow Systems	44
6.2	Groundwater Discharge	47

6.3	Natural Groundwater Discharge	48
6.3.1	Springs	49
6.3.2	Rivers	53
6.3.3	Lakes and Groundwater Ponds	54
6.4	Sinkholes	54
7	Groundwater Morphology	55
7.1	Groundwater Equipotential Map	55
7.2	Hydrogeological Sections	59
7.3	Groundwater Equipotential Difference Map	60
7.4	Hydroisobath Maps	60
7.5	Groundwater Prospect Map	60
7.6	Consequence Map	60
7.7	Hydrogeological Mapping	61
8	Hydrological Cycle: Water Balance	63
8.1	Changes in Groundwater Storage	66
8.2	Precipitation	67
8.2.1	Definitions	67
8.2.2	Measurements	67
8.2.3	Representation Options	67
8.3	Evaporation	69
8.3.1	Definitions	70
8.3.2	Measurement	71
8.3.3	Calculation of Potential Evapotranspiration	75
8.4	Discharge	77
8.4.1	Definitions	79
8.4.2	Measurement	80
8.4.3	Representation	81
8.5	Groundwater Budget/Groundwater Storage	88
9	Numerical Groundwater Models	91
9.1	Introduction	91
9.2	Basic Principles	91
9.3	Model Creation	92
9.4	Model Application	93
9.4.1	Groundwater Flow Models	93
9.4.2	Mass Transport Models	93
9.4.3	Program Packages	94
10	Basic Physical and Chemical Factors	95
10.1	Introduction	95
10.1.1	Isotopic Composition of Water	95
10.1.2	Isotope Hydrology	96
10.1.3	Physical Properties of Pure Water	99
Part II Groundwater Properties		
11	Basic Chemical and Physicochemical Principles	107
11.1	Chemical Concentration Data	107
11.1.1	Amount of Substance	107
11.1.2	Equivalent Particles	107
11.1.3	Molar Mass	108
11.1.4	Molar Concentration	109
11.1.5	Molality	109
11.1.6	Equivalent Concentration	109

11.1.7	Molar Ratios of the Equivalents	110
11.1.8	Mass	110
11.1.9	Mass Concentration	110
11.1.10	Conversion of Concentrations	111
11.1.11	Mass Ratio	112
11.1.12	Non-metric Units	112
11.2	Solubility of Solids in Water	113
11.2.1	Electrolytic Dissociation	114
11.2.2	Solubility of Organic Substances	115
11.2.3	Solubility Products (Solubility Constants)	115
11.3	Solubility of Gases in Water	117
11.4	Molar Concentrations and Activities	118
11.5	Carbonate Balance	121
11.6	Influence of the pH-Value on Solubility	128
11.7	Influence of the Redox Potential on Solubility	129
11.8	Electrical Conductivity	136
12	Physicochemical Processes in Groundwater Flow	141
12.1	Dissolution and Precipitation	141
12.2	Adsorption and Desorption	143
12.3	Ion Exchange	144
12.3.1	Types of Exchange Waters	144
12.4	Diffusion and Ion-Sieve Effect in Argillaceous Rocks	146
12.5	Oxidation and Reduction	147
12.6	Input and Transport of Organic Substances in the Subsoil	148
12.7	Thermodynamics	150
13	Groundwater Biology	155
13.1	Microbiology of Groundwater	155
13.1.1	Groundwater Geohygiene	156
13.1.2	Microbial Degradation Processes	158
13.2	Geohydrochemical Analyses and their Evaluation	160
13.2.1	Physical and Chemical Parameters of a Water Analysis	161
13.2.2	Calculation of Non-analyzed Parameters	173
13.2.3	Plausibility Checks	176
13.2.4	Evaluation and Presentation of Analytical Results	177
14	Groundwater Classifications	193
14.1	Classification According to Conducting Rock	193
14.2	Classification According to Geohydrochemical Properties (Independent of Conducting Rock)	193
14.2.1	Classification of Mineral and Medicinal Water	195
14.3	Classification According to Potential Use	197
Part III Applied Hydrogeology		
15	Groundwater Exploitation	203
15.1	Consultation and Expert-Opinion Reports	203
15.2	Preliminary Investigations	204
15.3	Determining Groundwater Recharge	205
15.3.1	General Remarks	205
15.3.2	Determination of Groundwater Recharge Rates Using Lysimeters	207

15.3.3	Determination of Groundwater Recharge Rates from Soil Water Balance	208
15.3.4	Determination of Groundwater Recharge Rates from the Discharge in Receiving Watercourses	208
15.3.5	Determination of Groundwater Recharge Rates from the Water-Balance Equations	208
15.3.6	Determination of Groundwater Recharge Rates from Hydroisopleths	209
15.3.7	Determination of Groundwater Recharge Rates from Chloride Concentration in the Groundwater and Precipitation	210
15.3.8	Determination of Groundwater Recharge Rates Using the Total Tritium Method	210
15.3.9	Determination of Groundwater Recharge Rates from Waterworks Data	210
15.3.10	Applicability of Determination Methods in Different Types of Investigated Areas	210
15.4	Geophysical Methods	211
15.4.1	Geophysical Surface Measurements	211
15.4.2	Geophysical Borehole Measurements	217
15.4.3	Application and Analysis of Geophysical Measurements	219
15.5	Main Investigations	219
15.5.1	Quality Criteria for Drilling and Development	219
15.5.2	Constructing Abstraction and Observation Wells	220
15.5.3	Calls for Tenders: German Experience	221
15.6	Drilling Methods	225
15.6.1	Dry Drilling	225
15.6.2	Hydraulic Circulation Drilling	228
15.6.3	Slanted and Horizontal Drilling	229
15.6.4	Borehole Blasting	230
16	Geohydraulic Investigations	231
16.1	Basic Principles of Geohydraulic Investigations	231
16.2	Laboratory Tests	233
16.2.1	Determination of Coefficient of Permeability of Unconsolidated Rocks Using Grain-Size Distribution	233
16.2.2	Determination of Coefficient of Permeability of Unconsolidated Rocks Using Flow-Through Tests	235
16.2.3	Determination of Coefficient of Bedrock Permeability Using Flow-Through Tests	237
16.2.4	General Remarks on Laboratory Test Results	237
16.3	Field Tests	237
16.3.1	Pumping Tests	237
16.3.2	Other Field Tests	252
16.3.3	Orientating Determination Methods	257
16.4	Determination of Geohydraulic Conductivity Using Tracer Tests	260
16.4.1	Using Dye as a Tracer	260
16.4.2	Using Salt as a Tracer	261
16.4.3	Using Artificial Radioactive Tracers	262
16.4.4	Using Spores as a Tracer	262
16.4.5	Using Bacteria as a Tracer	262
16.4.6	Using Boron (or Borate) and Fluorochlorocarbon as Tracers	262
16.4.7	Determination of Coefficient of Permeability Using Radioactive Isotopes in Wells	262

17	Water Exploitation	265
17.1	Water Exploitation in Areas with Water Shortages	265
17.2	Water Exploitation from Surface Waters and Their Surroundings	267
17.3	Water Exploitation Through Catchments of Springs, Percolation Systems and Galleries	268
17.4	Water Exploitation Through Wells	269
17.4.1	Exploitation Through Shaft Wells	269
17.4.2	Exploitation Through Vertical Wells	270
17.4.3	Exploitation Using Horizontal Collector Wells	270
17.4.4	Well Design and Determination of Well-Specific Data	271
17.5	Water Exploitation or Sewage Disposal Using Percolation Systems	278
17.6	Rain Water Infiltration: German Experience	282
17.7	Catchment and Exploitation of Mineral, Medicinal and Thermal Waters	283
18	Building Activities in Groundwater	285
18.1	Building in Groundwater	285
18.2	Groundwater Drawdown	285
18.3	Rise of Groundwater Level	287
19	Drinking Water Protection German Experience	289
19.1	Conservation Areas	289
19.1.1	Water Protection Areas	289
19.1.2	Perspectives in Groundwater Protection	293
19.1.3	Medicinal-Spring Protection Area	293
19.1.4	Spring Protection Area	294
19.2	Sources of Groundwater Contamination	294
19.2.1	Contamination with Solid Wastes	296
19.2.2	Contamination from Agricultural and Forestry Uses	299
19.2.3	Contamination from Pharmaceutical Usage	303
19.2.4	Contamination Through Atmospheric Pathways	303
19.2.5	Direct Contamination	303
19.2.6	Contamination from Road Traffic	310
19.2.7	Thermal Contamination	311
19.2.8	Contamination from Construction Works	312
19.2.9	Contamination from Graveyards	313
19.2.10	Geogenic Groundwater Contamination	313
19.3	Reduction of Groundwater Contamination	313
19.4	Impacts of Groundwater Abstraction	317
19.4.1	Yield Reductions Due to Groundwater Abstraction: Agricultural and Forestry Contexts	317
19.4.2	Building-Area Ground Damage Due to Groundwater Abstraction	322
