Preface	xi
Acknowledgements	xiii
1 A Framework for Understanding Environmental Change	1
1.1 Introduction	1
Subdividing geological time	3
1.2 The evolution of ideas	5
The 'Ice Age' discovery	5
Lower latitudes	7
Glacial and interglacial sequences	8
The Holocene and the Late Glacial	8
Sea level change	11
1.3 Early climate history of the Earth	13
1.4 The Cainozoic climatic decline	14
Environments of the Tertiary	14
Explaining Tertiary climates	16
1.5 The Tertiary/Quaternary transition	19
1.6 Reconstructing and interpreting past environments: key concepts	22
The law of superposition	22
Diagenesis, equifinality, provenance, and taphonomy	23
Uniformitarianism and neo-catastrophism	24
Environmental systems	26
Timescales, stratigraphic correlation, and dating	27
Contributions of stable isotope analyses	29
Environmental modelling	31
Selected reading	33
Review questions	34
2 Sources of Evidence for Reconstructing Past Environments	35
2.1 Introduction	35
2.2 Terrestrial evidence	36
Glacial evidence on land	36
Evidence of periglaciation	39
Palaeosols and wind-blown deposits	40
Lake, peat, and fluvial deposits	41

Pollen analysis	45
Other forms of terrestrially-based biological evidence	46
Geochemical and other sediment analyses	48
Cave deposits	49
Tree rings	50
Geomorphic evidence	51
Palaeoecological transfer functions	51
2.3 Evidence from oceans	53
Marine depositional environments	53
Physical characteristics	54
Biological data	55
Geochemical data	56
2.4 Evidence from ice sheets	58
Ice sheet accumulation	58
Stable isotope evidence	59
Other ice core proxies	59
2.5 Chronologies and correlation	60
Radiocarbon dating and other radioactive isotopes	61
Luminescence dating	65
Fission track, ESR, and CN dating	66
Incremental methods	67
Age-equivalent markers	67
Relative methods	69
Summary	70
Selected reading	70
Review questions	71
<b>3 Pleistocene Climatic Change and Environments of Mid to High Latitudes</b>	<b>72</b>
3.1 Introduction	72
3.2 The Pleistocene record	73
Deep-sea sediments	73
Loess sequences	76
Ice cores	77
Relation between land-based subdivisions and MIS	79
3.3 The changing extent of glaciers and ice caps	81
North America	82
The British Isles	84
Europe and Asia	86
The southern continents	87
3.4 Permafrost and its extent in the Pleistocene	90
3.5 Loess formation, distribution, and accumulation rates	92
Loess distribution	93
Loess in China and east Asia	95
Loess accumulation rates	96
3.6 The nature of glacial/interglacial cycles	96
The degree of climatic change in glacials	96

Rapid climatic change events (RCCEs)	100
The vegetational conditions of full glacials in Europe	108
The glacial vegetation of North America	110
The interstadials of the Last Glacial	110
The nature of interglacials	115
Variations in the British and European interglacials	118
Faunal and floral fluctuations	120
Selected reading	121
Review questions	122
<b>4 Pleistocene Environments of Lower Latitudes</b>	<b>124</b>
4.1 The antiquity of deserts	124
4.2 Pleistocene intensification of aridity	125
4.3 Dust in the Pleistocene	126
Evidence from ocean sediment cores	127
Dust deposition as recorded in ice cores	127
4.4 Ancient sand seas	129
The fossil dunes of northern India	132
The fossil dunes of Africa	132
The fossil dunes of North and South America	133
The fossil dunes of Australia	133
4.5 Pluvial lakes	134
Pluvial lakes of the Americas	134
Pluvial lakes of Africa	139
Pluvial lakes of the Near East and Arabia	143
Pluvial lakes of Central Asia and elsewhere	145
Summary	145
4.6 The Nile	146
4.7 Faunal and floral changes in the tropics	149
Selected reading	152
Review questions	152
<b>5 Environmental Change in Post-glacial Times</b>	<b>154</b>
5.1 A stable Holocene?	155
5.2 The transition from Late Glacial times	155
The traditional Late Glacial subdivisions	156
Dating events of the Late Glacial	157
Late Glacial climates	158
The Younger Dryas: global expression and causes	159
Late Glacial environments	163
5.3 The onset of the Holocene	165
Subdividing the Holocene	166
Early Holocene climate	166
Post-glacial spread of vegetation in Europe	168
5.4 The 8200 cal yr BP event	172
5.5 Mid- to late Holocene vegetation in Europe	174

5.6	The North American Holocene sequence	174
5.7	Russia, Asia, and Australia in the Holocene	177
5.8	Humans and the Holocene sequence	179
5.9	Post-glacial climatic optima and neoglaciations	182
	Neoglacials	184
	The Little Optimum, AD 800–1300	185
	The Little Ice Age (LIA)	187
5.10	Post-glacial times in the Sahara and adjacent regions	190
5.11	Concluding points	194
	Selected reading	195
	Review questions	195
6	Sea Level Changes of the Quaternary	197
6.1	The importance of sea level changes	198
6.2	Evidence of sea level change	198
6.3	Causes of sea level change	199
6.4	Eustatic factors	199
	Glacio-eustasy	200
	Orogenic eustasy	202
	Geoidal eustasy	203
6.5	Isostasy	203
	Glacio-isostasy	205
6.6	Miscellaneous causes of local changes in sea level	209
6.7	The nature of pre-Holocene sea levels	212
6.8	The post-glacial rise in sea level or Flandrian transgression	213
	Sea level change in the later Holocene	217
6.9	Post-glacial sea level changes in northern Europe: the combined effects of eustasy and isostasy	220
6.10	Future sea level rise	223
6.11	Conclusions	227
	Selected reading	227
	Review questions	228
7	Environmental Changes During the Period of Meteorological Records	229
7.1	Introduction	230
7.2	Temperature changes during the period of instrumental record	230
	Warming in the early twentieth century	230
	A cooling episode at mid century	233
	The warming episode of the late twentieth century	233
7.3	Precipitation changes during the period of instrumental record	236
	Records of precipitation change for Britain and other mid-latitude areas	236
	Precipitation change in lower latitudes	237
7.4	The various scales of climatic fluctuation	244
	The El Niño–Southern Oscillation	244
	The Pacific Decadal Oscillation	247
	The Arctic and Antarctic Oscillations	247

North Atlantic Oscillation	247
The Atlantic Multidecadal Oscillation	247
7.5 River discharge fluctuations	247
7.6 Changing lake levels	250
7.7 Changing dust-storm frequencies	253
7.8 Glacier and sea ice fluctuations in the twentieth century	256
7.9 The future	260
Selected reading	265
Review questions	266
8 Links between Environmental Change and Human Evolution and Society	267
8.1 Earliest hominins	267
8.2 Pleistocene environments and hominin speciation	270
Africa	272
Asia	272
Europe	273
8.3 Modern human origins and dispersals	274
Africa	275
Out of Africa: Arabia and the Near East	275
Europe	276
Asia and Australia	276
Colonization of the Americas	279
8.4 Mesolithic advances	280
8.5 Origins and spread of agriculture	281
The rise of civilization	284
8.6 Climate impacts on human society	288
Post-glacial shifts in aridity	288
The Medieval Warm Period (Little Optimum) and the Little Ice Age	291
8.7 Pre-industrial human impacts on the environment	294
Selected reading	296
Review questions	297
9 The Causes of Climatic Change	298
9.1 Introduction	299
9.2 Solar radiation hypotheses	300
Cycles of variation and effects on climate	300
9.3 Atmospheric transparency hypotheses	303
Correlations between volcanism and climatic change	303
Effects of non-volcanic dust	305
Dust and atmospheric CO <sub>2</sub>	306
Dust and clouds	307
9.4 Earth geometry theories: the Croll–Milankovitch hypothesis	307
Explaining the ‘mid-Pleistocene revolution’	311
9.5 Hypotheses involving changes in terrestrial geography	312
9.6 The role of the greenhouse gases	313
9.7 Feedback hypotheses involving land, oceans, atmosphere, and ice	316

Albedo-based hypotheses	316
Causes of abrupt climate changes	317
Ocean-ice-atmosphere connections in the North Atlantic	317
Northern and Southern Hemisphere connections	320
Connections between AMOC and low-latitude climate	321
Holocene variation in ocean circulation	322
9.8 Conclusion	322
Selected reading	324
Review questions	325
Glossary	326
References	334
Index	396
