## Terahertz Radiation from Semiconductors

Jie Shan and Tony F. Heinz .....	1
1. Introduction .....	1
2. THz Radiation from Transient Currents in Large-Area Emitters .....	4
2.1. Overall Configuration and Nonlinear Snell's Law .....	4
2.2. Boundary Conditions for Surface Photocurrent .....	6
2.3. THz Radiation Excited at Normal Incidence .....	6
2.4. THz Radiation Excited at Oblique Incidence .....	7
2.5. Geometrical Factors in THz Radiation Efficiency .....	8
3. Models of the Transient Photocurrent .....	9
3.1. Current Density in Terms of Response Functions .....	10
3.2. Drude-Lorentz Model .....	13
3.3. Predicted THz Waveforms and Spectra .....	17
4. Basics of THz Radiation from Large-area Photoconductive Emitters .....	19
4.1. Directionality of THz Emission .....	19
4.2. Angular Dependence of the THz Emission Efficiency .....	20
4.3. THz Waveform and its Spectral Characteristics .....	21
4.4. Dependence on the Bias Fields .....	23
4.5. Power Scaling of Large-area THz Emitters .....	23
4.6. Other Mechanisms of THz Emission from Semiconductors .....	24
5. Influence of Magnetic Fields .....	27
5.1. Switching of THz Emitters using Magnetic Fields .....	27
5.2. Enhancement of THz Radiation in Magnetic Fields .....	27
5.3. Origin of THz Enhancement in Magnetic Fields .....	29
5.4. Cyclotron Radiation .....	33
5.5. Refinements Beyond the Drude-Lorentz Model .....	34
6. Dynamics of Bias Field .....	35
6.1. Space-Charge Screening .....	38
6.2. Plasma Oscillations .....	41
6.3. Near-Field Screening in Large Emitters .....	45
7. Conclusions .....	50

## Ultrafast Scanning Tunneling Microscopy: Principles and Applications

Dzmitry A. Yarotski and Antoinette J. Taylor .....	57
--	----

1. Introduction .....	57
2. Photoconductively Gated Scanning Tunneling Microscopy .....	60
3. Time-Resolved STM Through Tunnel-Distance Modulation .....	82
4. Junction-Mixing Scanning Tunneling Microscopy .....	85
5. Conclusion .....	94

### **Ultrafast Coherent Dynamics in Semiconductor Quantum Dots**

Han Htoon and Chih-Kang Shih .....

1. Introduction .....	99
1.1. Semiconductor Quantum Dots: The Artificial Atoms .....	99
1.2. Quantum Coherence Phenomena .....	100
1.3. Quantum Decoherence and Energy Relaxation .....	101
1.4. Quantum Interference .....	103
1.5. Rabi Oscillation .....	105
1.6. Interplay of Rabi Oscillation and Quantum-Interference Phenomenon .....	107
2. Self-Assembled Quantum Dots .....	108
3. Single-Dot Spectroscopy .....	109
3.1. Low-Temperature Nanoscale Spectroscopic Imaging System .	110
3.2. Spectroscopic Imaging Through a Micrometer-scale Aperture	111
3.3. Cross-sectional Nano-PL .....	113
4. PLE Spectroscopy and Energy-Level Structure .....	115
5. Wavepacket Interferometry on Excited States of SAQDs .....	119
6. Quantum Decoherence and Carrier Relaxation .....	121
7. Direct Observation of Rabi Oscillation .....	124
8. A New Type of Quantum-Interference Phenomenon .....	126
8.1. Nonsinusoidal Oscillation Patterns of Fine Time Scale .....	127
8.2. Theoretical Simulation .....	128
8.3. Conceptual Visualization Using Bloch Model .....	130
8.4. Evolution of Oscillation Envelope on a Coarse Time Scale ...	131
9. Conclusion .....	133

### **Spontaneous Emission from Semiconductors After Ultrafast Pulse Excitation: Theory and Simulation**

Karsten Hannewald, Stephan Glutsch and Friedhelm Bechstedt .....

1. Introduction .....	140
2. Theory of Ultrafast Pulse Excitation and Energy Relaxation in Semiconductors .....	144
2.1. Semiconductor Bloch Equations .....	144
2.2. Quantum-Kinetic Theory of Electron-LO-Phonon Scattering	150
3. Theory of Photoluminescence in Semiconductors .....	160
3.1. Photon-Assisted Density Matrices .....	161
3.2. Nonequilibrium Green's Functions .....	164
3.3. Comparison: Density Matrices versus Green's Functions .....	172

4. Theory of Hot Luminescence from Semiconductors After Pulse Excitation ..... 176

5. Theory of Photoluminescence Excitation Spectroscopy in Semiconductors ..... 179

6. Summary ..... 185

**Optical Studies of Electric-Field-Induced Electron and Hole Transient Transports and Optical Phonon Instability in Semiconductor Nanostructures**

Kong-Thon Tsen ..... 193

1. Introduction ..... 193

2. The Physics Behind Electron-Velocity Overshoot, Electron Ballistic Transport Phenomena in Semiconductors ..... 195

3. Raman Spectroscopy in Semiconductors ..... 200

    3.1. How Raman Spectroscopy can be Used for Probing Carrier Distributions in Semiconductors ..... 200

    3.2. Theory of Raman Scattering by Lattice Vibrations in Semiconductors ..... 203

4. Experimental Approach, Samples and Experimental Setup ..... 207

    4.1. General Consideration ..... 207

    4.2. Samples and Experimental Approach ..... 209

5. Determination of the Average Effective Electric Field Intensity Under Ultrashort Pulse Laser Irradiation ..... 212

6. Transient Subpicosecond Raman Studies of High-Field Electron Transport in GaAs – Observation of Electron-Velocity-Overshoot Phenomenon ..... 214

    6.1. Samples and Experimental Technique ..... 215

    6.2. Experimental Results, Analysis, and Discussions ..... 215

7. Subpicosecond Time-Resolved Raman Studies of Field-Induced Electron Transport in a GaAs-Based p-i-n Nanostructure ..... 223

    7.1. Samples and Experimental Technique ..... 223

    7.2. Experimental Results, Analysis, and Discussions ..... 226

8. Observation of Electron Ballistic Transport in an InP-Based p-i-n Nanostructure ..... 229

    8.1. Samples and Experimental Technique ..... 229

    8.2. Experimental Results and Discussions ..... 230

9. Transient Electric-Field-Induced Hole Transport in Al<sub>0.3</sub>Ga<sub>0.7</sub>As-Based p-i-n Nanostructure Semiconductor ..... 231

    9.1. Sample, Experimental Technique, and Approach ..... 232

    9.2. Experimental Results, Analysis, and Discussions ..... 233

10. Subpicosecond Raman Studies of Electron and Hole Transport in an Al<sub>0.3</sub>Ga<sub>0.7</sub>As-Based p-i-n Nanostructure – Simultaneous Observation of Electron- and Hole-Velocity Overshoots ..... 242

    10.1. Samples and Technique ..... 242

    10.2. Experimental Results and Analysis ..... 243

11. Observation of Optical Phonon Instability in GaAs-Based p-i-n Nanostructure ..... 247  
 11.1. Sample and Experimental Technique ..... 248  
 11.2. Experimental Results, Analysis, and Discussions ..... 248  
 12. Conclusions and Future Work ..... 253

**Carrier Dynamics in III-Nitrides Studied by Time-Resolved Photoluminescence**

Hongxing Jiang and Jingyu Lin ..... 259  
 1. Introduction ..... 259  
 2. Instrumentation for Time-Resolved Optical Studies ..... 262  
 3. Radiative-Recombination Rates in Nitrides ..... 267  
 4. Localized Excitons in Alloys ..... 268  
 4.1. Al-Rich AlGa<sub>N</sub> Alloys ..... 268  
 4.2. InAlGa<sub>N</sub> Quaternary Alloys ..... 275  
 4.3. InAlGa<sub>N</sub>-Quaternary-Based QWs ..... 281  
 5. Optical Properties of Al-Rich AlGa<sub>N</sub>/Ga<sub>N</sub> Heterostructures ..... 283  
 6. Ga<sub>N</sub>/Al<sub>N</sub> QWs ..... 286  
 7. Nitride Quantum Dots ..... 290  
 8. Nitride Waveguides ..... 295  
 9. Time-Resolved Electroluminescence Studies of Microsize Emitters . 298  
 10. Concluding Remarks ..... 299

**Femtosecond X-Rays and Structural Dynamics in Condensed Matter**

Andrea Cavalleri and Robert W. Schoenlein ..... 309  
 1. Introduction ..... 309  
 2. Laser-Plasmas and X-ray Diffraction ..... 311  
 2.1. Laser-Plasma Sources ..... 311  
 2.2. Coherent Acoustic Phonons in Semiconductors ..... 312  
 2.3. X-ray Measurements in Bulk Semiconductors ..... 314  
 2.4. Semiconductor Heterostructures ..... 316  
 2.5. Phase Transition in VO<sub>2</sub> ..... 321  
 2.6. VO<sub>2</sub> Open Questions ..... 326  
 2.7. Femtosecond X-ray Absorption: The VO<sub>2</sub> Phase Transition . 327  
 3. Synchrotron-Based Sources and X-ray Absorption ..... 329  
 3.1. Tunable Femtosecond X-rays from a Synchrotron Storage Ring 329  
 4. Conclusion and Outlook ..... 333

**Generation of Coherent Acoustic Phonons in Nitride-Based Semiconductor Nanostructures**

Gia-Wei Chern, Chi-Kuang Sun, Gary D. Sanders and Christopher J. Stanton ..... 339  
 1. Introduction ..... 340  
 2. Time-Resolved Pump-Probe Measurement of Coherent LA Phonons 344  
 2.1. Experimental Setup ..... 344

2.2. Generation of Coherent LA Phonon in InGaN/GaN MQWs . 344

2.3. Coherent Control of LA Phonons in InGaN/GaN MQWs .... 349

2.4. Generation of Coherent LA Phonons  
in Strained GaN Thin Films ..... 352

3. Microscopic Theory for Photogeneration of Carriers  
and LA Phonons ..... 355

4. Continuum Elastic Theory ..... 362

5. Loaded-String Model ..... 366

6. Applications to InGaN/GaN MQWs ..... 369

6.1. Quantized Carrier States in MQW Diodes ..... 369

6.2. Photogeneration of Carriers ..... 370

6.3. Generation of Coherent Phonons ..... 373

6.4. Coherent Phonon Energy ..... 376

7. Crystal-Orientation Effects ..... 380

8. Theory of Transient Transmission Measurement  
of Coherent Acoustic Phonons and Comparison with Experiments 386

9. Conclusion ..... 390

**Index** ..... 395
