

# CONTENTS

1. Introduction 5
2. Growth stimulation and growth stimulators 9
  - 2.1 Chemotactic and migration effects of growth factors 14
  - 2.2 Transforming growth factors 15
  - 2.3 Mechanisms of stimulation by growth factors 18
    - 2.3.1 Binding of growth factors and hormones to receptors in plasma membrane 18
    - 2.3.2 Transition of growth factor and hormone signals across the plasma membrane 19
      - 2.3.1.1 Activating or inactivating of plasma-membrane-bound enzyme 19
      - 2.3.2.2 Opening ion channels that are functionally bound to receptors 20
    - 2.3.3 Growth factors and hormones and their intracellular signals 20
    - 2.3.4 Internalization of growth factors and hormones 21
3. Oncogenes of tumor cells and their relation to the production and function of growth factors 24
  - 3.1 Transforming of cells by products of oncogenes mimicking growth factors 26
    - 3.2.1 Factors similar to PDGF 26
    - 3.1.2 Factors similar to EGF 27
    - .. 3.1.3 Factors similar to insulin 27
  - 3.2 Transforming of cells by products of oncogenes mimicking functional activity of membrane receptors 28
  - 3.3 Transforming of cells by products of oncogenes mimicking functional activity of regulatory component of intracellular messenger systems 30
4. Growth inhibition and growth inhibitors 33
  - 4.1 Growth inhibitors 33
  - 4.2 Characteristics of growth inhibitors 34
    - 4.2.1 Cell, tissue and species specificity 35
    - 4.2.2 Selectivity and cytotoxicity 36
    - 4.2.3 Cell cycle specificity 37
  - 4.3 Growth inhibition assays and inhibition efficiency 41
  - 4.4 The duration of inhibition and chemical characteristics of inhibitors 43
  - 4.5 Mechanisms of inhibition by specific inhibitors 45
  - 4.6 Interaction of growth inhibitors with growth factors and hormones 46
  - 4.7 Inhibitors isolated from tissues and from conditioned media 47
  - 4.8 Tumor inhibiting factors 48
5. Tumor growth as a result of changes in growth factors and growth inhibitors action 51
