Preface to the seventh edition	ix
Preface to the first edition	xi
Publisher's acknowledgements	xiii
Glossary of symbols	xvii
1 Introduction	1
1.1 Analytical problems	1
1.2 Errors in quantitative analysis	2
1.3 Types of error	3
1.4 Random and systematic errors in titrimetric analysis	6
1.5 Handling systematic errors	8
1.6 Planning and design of experiments	11
1.7 Statistical calculations	12
Bibliography and resources	14
Exercises	15
2 Statistics of repeated measurements	16
2.1 Mean and standard deviation	16
2.2 The distribution of repeated measurements	18
2.3 Log-normal distribution	23
2.4 Definition of a 'sample'	24
2.5 The sampling distribution of the mean	25
2.6 Confidence limits of the mean for large samples	26
2.7 Confidence limits of the mean for small samples	27
2.8 Presentation of results	29
2.9 Other uses of confidence limits	30
2.10 Confidence limits of the geometric mean for a log-normal distribution	30
2.11 Propagation of random errors	31
2.12 Propagation of systematic errors	34
Bibliography	35
Exercises	35

3	Significance tests	37
3.1	Introduction	37
3.2	Comparison of an experimental mean with a known value	38
3.3	Comparison of two experimental means	39
3.4	Paired <i>t</i> -test	43
3.5	One-sided and two-sided tests	45
3.6	<i>F</i> -test for the comparison of standard deviations	47
3.7	Outliers	49
3.8	Analysis of variance	52
3.9	Comparison of several means	53
3.10	The arithmetic of ANOVA calculations	56
3.11	The chi-squared test	59
3.12	Testing for normality of distribution	61
3.13	Conclusions from significance tests	65
3.14	Bayesian statistics	67
	Bibliography	70
	Exercises	71
4	The quality of analytical measurements	75
4.1	Introduction	75
4.2	Sampling	76
4.3	Separation and estimation of variances using ANOVA	77
4.4	Sampling strategy	78
4.5	Introduction to quality control methods	79
4.6	Shewhart charts for mean values	80
4.7	Shewhart charts for ranges	82
4.8	Establishing the process capability	84
4.9	Average run length: CUSUM charts	87
4.10	Zone control charts (J-charts)	91
4.11	Proficiency testing schemes	93
4.12	Method performance studies (collaborative trials)	96
4.13	Uncertainty	100
4.14	Acceptance sampling	109
4.15	Method validation	112
	Bibliography	116
	Exercises	117
5	Calibration methods in instrumental analysis: regression and correlation	120
5.1	Introduction: instrumental analysis	120
5.2	Calibration graphs in instrumental analysis	122
5.3	The product-moment correlation coefficient	124
5.4	The line of regression of <i>y</i> on <i>x</i>	128
5.5	Errors in the slope and intercept of the regression line	129
5.6	Calculation of a concentration and its random error	131
5.7	Limits of detection	134

5.8	The method of standard additions	138
5.9	Use of regression lines for comparing analytical methods	140
5.10	Weighted regression lines	145
5.11	Intersection of two straight lines	150
5.12	ANOVA and regression calculations	152
5.13	Introduction to curvilinear regression methods	153
5.14	Curve fitting	156
5.15	Outliers in regression	160
	Bibliography	162
	Exercises	162
6	Non-parametric and robust methods	165
6.1	Introduction	165
6.2	The median: initial data analysis	166
6.3	The sign test	171
6.4	The Wald-Wolfowitz runs test	173
6.5	The Wilcoxon signed rank test	174
6.6	Simple tests for two independent samples	177
6.7	Non-parametric tests for more than two samples	180
6.8	Rank correlation	182
6.9	Non-parametric regression methods	183
6.10	Introduction to robust methods	186
6.11	Simple robust methods: trimming and winsorisation	187
6.12	Further robust estimates of location and spread	188
6.13	Robust ANOVA	190
6.14	Robust regression methods	191
6.15	Re-sampling statistics	193
6.16	Conclusion	194
	Bibliography and resources	195
	Exercises	196
7	Experimental design and optimisation	198
7.1	Introduction	198
7.2	Randomisation and blocking	200
7.3	Two-way ANOVA	201
7.4	Latin squares and other designs	204
7.5	Interactions	205
7.6	Identifying the important factors: factorial designs	211
7.7	Fractional factorial designs	216
7.8	Optimal experimental designs	219
7.9	Optimisation: basic principles and univariate methods	220
7.10	Optimisation using the alternating variable search method	223
7.11	The method of steepest ascent	225
7.12	Simplex optimisation	227
7.13	Simulated annealing	231
	Bibliography and resources	232
	Exercises	232

8	Multivariate analysis	235
8.1	Introduction	235
8.2	Initial analysis	237
8.3	Principal component analysis	238
8.4	Cluster analysis	242
8.5	Discriminant analysis	246
8.6	<i>K</i> -nearest neighbour (KNN) method	250
8.7	Disjoint class modelling	251
8.8	Regression methods	251
8.9	Multiple linear regression (MLR)	253
8.10	Principal components regression (PCR)	255
8.11	Partial least-squares (PLS) regression	257
8.12	Natural computation methods: artificial neural networks	260
8.13	Conclusion	261
	Bibliography and resources	262
	Exercises	262
	Solutions to exercises	265
	Appendix 1: Commonly used statistical significance tests	275
	Appendix 2: Statistical tables	278
	Index	287

Supporting resources

Visit www.pearsoned.co.uk/miller to find valuable online resources

For students

- Further exercises

For instructors

- Further exercises
- Complete Instructor's Manual
- PowerPoint slides of figures from the book
