

46	7.5 Bayesian estimation with (al)	Abductive logistic coordinates	7.4	144
48	7.6 Exercises	Orthogonal projections	8.4	147
54		Matrix operations in the simplex	9.4	
54	Linear Models	Linearization-linear combination of compositions	10.4	149
55	8.1 Linearity	Linearization-linear combination of functions	11.2	150
55	8.2 Regression	Optimal weights in linear regression	11.3	156
55	8.3 Linearity	Regression function with composition	11.4	160
56	8.4 Linear models	Conditioning according to interactive predictions	11.4	163
61	8.5 Exercises	Exercises	11.4	165

Contents

62	Compositional Processes	Exploratory Data Analysis	12	
62	Preface	General remarks	2.1	xii
62	Linear processes	Simple central tools, variance, and association measures	2.2	176
62	About the Authors	Centrality and scaling	2.3	xv
62	Acknowledgments	The project: a statistical discipline	2.4	xix
62	9.5 Elementary differential equations	Construction of a 2D compositional object	2.4.1	186
62	9.5.1 Derivative	Interpretation analysis of coordinates	2.4.2	189
62	9.5.2 Forced derivative	Exploratory analysis of compositions	2.5	189
62	1 Introduction	A geometric exercise	2.6	190
62	2 Compositional Data and Their Sample Space	Linear trends along biplot axes	2.7	8
62	2.1 Basic concepts	A uniform example	2.8	12
62	2.2 Principles of compositional analysis	A biplotic example	2.9	12
62	2.2.1 Scale invariance	Exercises	2.10	15
62	2.2.2 Permutation invariance	Random sample space	2.1	16
62	2.2.3 Subcompositional coherence	Sample space	2.2	16
62	2.3 Zeros, missing values, and other irregular components	Construction of compositions	2.3	16
62	2.3.1 Kinds of irregular components	Change of representation	2.4	19
62	2.3.2 Strategies to analyze irregular data	A composition of compositions	2.5	21
62	2.4 Exercises	A composition of change of representation	2.6	
62	3 The Aitchison Geometry	The Aitchison geometry	2.7	23
62	3.1 General comments	Definitions related to lograt	2.8	23
62	3.2 Vector space structure	Assimilability and center	2.9	24
62	3.3 Inner product, norm and distance	Properties distributions on the simplex	2.3	26
62	3.4 Geometric figures	Type distribution on the simplex	2.4	28
62	3.5 Exercises	Other distributions	2.5	30
62	4 Coordinate Representation	Exercises	2.6	32
62	4.1 Introduction	Statistical inference	2.7	32
62	4.2 Compositional observations in real space	Point estimation of center and variability	2.8	33
62	4.3 Generating systems	Testing hypotheses about compositions	2.9	33
62	4.4 Orthonormal coordinates	Testing hypotheses about two populations	2.3	36
62	4.5 Balances	Popularity and confidence regions	2.4	38
62	4.6 Working on coordinates	Popularity and confidence regions	2.5	43

4.7	Additive logratio coordinates (alr)	46
4.8	Orthogonal projections	48
4.9	Matrix operations in the simplex	54
4.9.1	Perturbation-linear combination of compositions	54
4.9.2	Linear transformations of S^D : endomorphisms	55
4.9.3	Other matrix transformations on S^D : nonlinear transformations	57
4.10	Coordinates leading to alternative Euclidean structures	59
4.11	Exercises	61
5	Exploratory Data Analysis	65
5.1	General remarks	65
5.2	Sample center, total variance, and variation matrix	66
5.3	Centering and scaling	68
5.4	The biplot: a graphical display	70
5.4.1	Construction of a biplot	70
5.4.2	Interpretation of a 2D compositional biplot	72
5.5	Exploratory analysis of coordinates	76
5.6	A geological example	79
5.7	Linear trends along principal components	85
5.8	A nutrition example	89
5.9	A political example	96
5.10	Exercises	100
6	Random Compositions	103
6.1	Sample space	103
6.1.1	Conventional approach to the sample space of compositions	105
6.1.2	A compositional approach to the sample space of compositions	106
6.1.3	Definitions related to random compositions	107
6.2	Variability and center	108
6.3	Probability distributions on the simplex	112
6.3.1	The normal distribution on the simplex	114
6.3.2	The Dirichlet distribution	121
6.3.3	Other distributions	127
6.4	Exercises	128
7	Statistical Inference	130
7.1	Point estimation of center and variability	130
7.2	Testing hypotheses on compositional normality	135
7.3	Testing hypotheses about two populations	136
7.4	Probability and confidence regions for normal data	142

7.5 Bayesian estimation with count data	144
7.6 Exercises	147
8 Linear Models	149
8.1 Linear regression with compositional response	150
8.2 Regression with compositional covariates	156
8.3 Analysis of variance with compositional response	160
8.4 Linear discrimination with compositional predictor	163
8.5 Exercises	165
9 Compositional Processes	172
9.1 Linear processes	173
9.2 Mixture processes	176
9.3 Settling processes	178
9.4 Simplicial derivative	183
9.5 Elementary differential equations	186
9.5.1 Constant derivative	187
9.5.2 Forced derivative	189
9.5.3 Complete first-order linear equation	194
9.5.4 Harmonic oscillator	200
9.6 Exercises	204
10 Epilogue	206
