About Ron Lake xiii

Introduction xv

Part I **GML: An Introduction** 1

585/2005

1402,50

Chapter 1 **Once over lightly** 3

- 1.1 What is GML? 3
- 1.2 What is a web service? 4
- 1.3 What is a geospatial web service? 5
- 1.4 What is the relationship between GML and web services? 6
- 1.5 What is the Open GIS Consortium (OGC)? 6
- 1.6 What is the Geo-Web? 7
- 1.7 What is the connection between GML and G-XML? 8
- 1.8 What is the connection between ISO TC/211 and GML? 9
- 1.9 Chapter summary 9
- References 10

Chapter 2 **XML and GML** 11

- 2.1 What is an XML encoding? 11
- 2.2 The XML Technology Family 13
- 2.3 Chapter summary 19
- References 20
- Additional references 20

Chapter 3 **Basic concepts of GML** 21

- 3.1 Features and properties 21
- 3.2 Feature relationships 26
- 3.3 Geometries in GML 27
- 3.4 Other objects in GML 29
- 3.5 Chapter summary 30
- Reference 30
- Additional reference 30

Chapter 4	<b>GML core and application schemas</b>	31
4.1	About the GML core schemas	31
4.2	About GML application schemas	31
4.3	Chapter summary	35
	References	35
Chapter 5	<b>Technical issues for deploying GML</b>	36
5.1	GML deployment issues	36
5.2	GML deployment examples	38
5.3	Chapter summary	42
	Reference	44
	Additional references	44
Chapter 6	<b>GML and geospatial web services</b>	45
6.1	GML and HTML	46
6.2	Current OGC geospatial web services	47
6.3	Schema registries	49
6.4	GML and web-service description	50
6.5	Chapter summary	53
	References	53
Chapter 7	<b>Real-world deployment examples</b>	54
7.1	GML in local government	54
7.2	GML and utilities	57
7.3	GML and natural-resource management	59
7.4	GML and disaster management	62
7.5	GML and location-based services (LBS)	65
7.6	Chapter summary	67
	References	67
	Additional references	67
Part II	<b>GML: A Technical Reference Guide</b>	69
Chapter 8	<b>Basic concepts of GML</b>	71
8.1	GML and the XML technology family	71
8.2	GML instances and schemas	73
8.3	Dictionaries	74
8.4	Introducing features and geometries	74

- 8.5 What are the differences between GML 2.0 and GML 3.0? 75
- 8.6 XML and GML – GML is XML 76
- 8.7 XML Schema and GML 77
- 8.8 Chapter summary 79
  - References 80
  - Additional references 80
  
- Chapter 9 **Introducing the GML model and GML features** 81
  - 9.1 About GML objects and properties 81
  - 9.2 Features and properties 83
  - 9.3 How are feature relationships expressed? 87
  - 9.4 Features and feature collections 88
  - 9.5 More about features 90
  - 9.6 Chapter summary 94
    - References 95
    - Additional reference 95
  
- Chapter 10 **GML core schemas overview** 96
  - 10.1 About the GML base schema 96
  - 10.2 Substitution and derivation by restriction and extension 100
  - 10.3 Abstract elements and types in GML 3.0 103
  - 10.4 Chapter summary 105
    - References 106
    - Additional references 106
  
- Chapter 11 **Developing and managing GML application schemas** 107
  - 11.1 How do I create an application schema that defines features? 108
  - 11.2 How do I create metaData schemas? 120
  - 11.3 How do I select the appropriate GML core schemas for my application domain? 123
  - 11.4 How do I find and use existing application schemas? 126
  - 11.5 Chapter summary 126
    - References 128
    - Additional reference 128
  
- Chapter 12 **GML geometry** 129
  - 12.1 What if my geometry needs are very simple? 129

Chapter 4	12.2	Why do I need the extra geometries in GML 3.0?	132
	12.3	What are the geometry primitives?	134
	12.4	What are the new complex geometries in GML 3.0?	141
	12.5	What are the geometry aggregates?	145
	12.6	How do I express a feature's geometry?	145
	12.7	How do I add new geometry objects in an application schema?	151
Chapter 9	12.8	Chapter summary	152
		References	154
		Additional references	154
Chapter 13	<b>GML topology</b>		155
	13.1	How do I encode a simple network with GML topology?	157
	13.2	How do I encode parcel networks?	158
Chapter 8	13.3	How is topology connected to geometry?	160
	13.4	How do I encode faces with interior boundary rings?	161
	13.5	How do I encode a three-dimensional solid in topology?	163
	13.6	How do I encode the topological properties of a feature?	164
	13.7	How do I relate the topology of a feature collection to the topology of its members?	165
	13.8	How is a topology complex encoded?	166
Chapter 10	13.9	How do I add new topology properties to an application schema?	170
Chapter 7	13.10	What about arbitrary relationships, which may or may not be topological?	171
	13.11	Chapter summary	172
		References	174
		Additional references	174
Chapter 14	<b>GML temporal elements and dynamic features</b>		175
	14.1	How do I specify which temporal reference system is being used?	176
	14.2	How do I define an ordinal temporal reference system?	176
	14.3	How do I define a temporal coordinate reference system?	178
Chapter 11	14.4	How do I define a dynamic feature in an application schema?	179
	14.5	What is a 'snapshot' and how is it used in GML?	180
	14.6	How is the <code>boundedBy</code> property encoded for dynamic features?	182

14.7	What does the <code>history</code> property represent?	183
14.8	How do I create user-defined <code>history</code> properties and time slices?	186
14.9	How is the <code>TimePeriod</code> primitive encoded in GML?	189
14.10	Chapter summary	190
	References	191
	Additional references	191
Chapter 15	<b>GML coordinate reference systems</b>	192
15.1	How are CRS dictionaries used in practice?	193
15.2	How do I provide local visibility for CRS information?	194
15.3	How do I create a CRS dictionary?	195
15.4	How do I create user-defined dictionary elements and types for CRS?	198
15.5	What is the difference between a CRS and CS?	199
15.6	What are the CRS support components?	200
15.7	Which CRS schemas should I use in my application schema?	201
15.8	What are the CRS definition elements and types provided by GML?	202
15.9	How do I create user-defined CRS elements and types?	209
15.10	How do I create a simple engineering CRS?	211
15.11	How do I create a simple geographic CRS?	213
15.12	How do I handle a standard CRS as defined by EPSG?	215
15.13	How do I handle satellite coordinate reference systems?	216
15.14	What about arbitrary affine coordinate reference systems?	217
15.15	Chapter summary	218
	References	219
	Additional references	219
Chapter 16	<b>Units of measure, values and observations</b>	220
16.1	Units of measure	221
16.2	Values	228
16.3	Observations	235
16.4	Chapter summary	240
	References	241
	Additional references	241

- Chapter 17 **GML Coverages** 242
- 17.1 What is a Coverage? 242
  - 17.2 Are Coverages always gridded data? 243
  - 17.3 Is a Coverage a feature collection? 243
  - 17.4 How is a GML Coverage encoding structured? 243
  - 17.5 How do I use a Coverage encoding in a data request? 247
  - 17.6 Which Coverage geometries are supported by GML? 247
  - 17.7 Why does GML provide three models for range value encoding? 249
  - 17.8 How do I encode the description of the range of the Coverage? 250
  - 17.9 How do I process a GML Coverage in an application? 255
  - 17.10 What are the rules for creating Coverage schemas? 256
  - 17.11 How do I define and encode temporal Coverages in GML? 260
  - 17.12 Chapter summary 262
    - References 263
    - Additional references 263
- Chapter 18 **GML default styling** 264
- 18.1 What is styling? 264
  - 18.2 What is the default style model? 265
  - 18.3 How do I encode the default style property in GML? 265
  - 18.4 Is there a relationship between default styling and SVG? 267
  - 18.5 How do I include default styles in a GML application schema? 267
  - 18.6 What are the different style descriptors? 267
  - 18.7 How is the feature style encoded in GML? 268
  - 18.8 How is the graph style encoded in GML? 276
  - 18.9 What are some of the additional styling elements? 278
  - 18.10 How can I use default styles to draw a map? 279
  - 18.11 What about styling with XSLT? 282
  - 18.12 What is the OGC styled layer descriptor (SLD)? 283
  - 18.13 Chapter summary 283
    - References 285
    - Additional reference 285
- Chapter 19 **GML and geospatial web services revisited** 286
- 19.1 GML and web-service message payloads 286
  - 19.2 GML and web-service interface description 287

19.3	Web feature services revisited	291
19.4	Chapter summary	297
	References	298
	Additional references	298
Chapter 20	<b>GML, relational databases and legacy GIS</b>	299
20.1	How do I store GML data in an RDBMS?	299
20.2	How do I store GML data in object-relational databases?	311
20.3	GML and the geo-relational model	314
20.4	GML and ArcSDE	317
20.5	Chapter summary	322
	Additional references	323
Appendix A	<b>GML core schemas</b>	324
Appendix B	<b>Resources</b>	328
Appendix C	<b>Glossary of terms</b>	334
Appendix D	<b>XMLSpy tutorial</b>	354
	<b>Index</b>	373
